The fall is so slight in Elm Creek, the flats on either side so level, that there has not developed a water course of any considerable size or depth and the flats normally get flooded when the snow melts or there is a good rain to provide runoff. The operator has been cutting a mixture of western wheatgrass, clover and alfalfa for hay, but he was not able to get much flooding done this season because of the drouth which prevailed, but there are small water holes now open where stock could get good water and they indicate that the water table is only about 7 or 8 feet below the general level of the flats and the purpose of this project is to spread the water by means of spreader dams and dikes to check the runoff and cover more width of the bottoms and to pump onto some of the higher areas. The soil is a rich alluvial loam.

Dear Mr. Reichert:

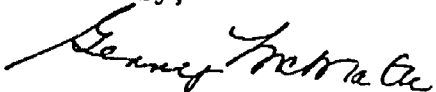

I am contacting you in reference to your 1988 irrigation questionnaire. Upon review of your questionnaire, I noted that you stated you irrigated about 20 acres with two waterspreading systems.

In October, 1980, your irrigation system was inspected for licensing purposes. The inspection found diversion dikes were used on Dry Elm Creek and a pump was used to divert water from Bidelman Draw for flood irrigation. Normally, we do not send irrigation questionnaires to water right holders with spreader type systems because they have no way of measuring the amount of water they use. However, since a pump is used for part of your system, an irrigation questionnaire is mailed to you.

If you use your pump, you will need to keep track of the number of days pumped in each month, the average hours per day, the average pump rate, crop and acres irrigated (the amount of water used will be tabulated in our office). This information can then be written on the questionnaire when you receive it (in October, 1989).

If you no longer use the pump and have strictly a waterspreading system. Please notify our office of the change. If you have any questions, please contact me.

Sincerely,

RE: status of irrigation system/irrigation questionnaire

COMMENTS:

The 1993 irrigation questionnaire submitted by Mr. Reichert reflected irrigation of 31 acres using spreader dikes. The 1980 "report of examination of works" indicates a rainmaster pump was utilized.

I called and spoke with Mrs. Reichert concerning their irrigation system. She stated that they have pumped in the past, but have not needed too for several years. She stated that they might use the pump again in the future if there was not enough water flowing from the diversion dikes.

I told her that if and when they use the pump, they will need to fill out the remainder of the irrigation questionnaire. If only spreader dikes are used, just reporting they irrigated using the dikes is satisfactory.

I/We understand that the validity of Water Right No. 1036-1 has not been determined by this transfer action. If I/We have any questions on validity, I/We understand that only the Water Management Board has the authority to determine if a water permit/right is valid (see note).

You are requested to file this "Notice of Transfer" in the appropriate file with the Water Rights Program, as evidence of the change of ownership.

A fee of Fifty Dollars (\$50.00) is required to cover the filing fees as required under SDCL 46-2-13. This form must be signed by the new owner.

I/We Ross Reichert, the new owner, certify that the above information is true and correct.

NOTE: Water permits may be cancelled for nonconstruction after the five year construction period has expired. Once a water permit is developed and the water used, the permit becomes a right. A water right may be lost for three reasons:

1. Abandonment - no intent to use water and use is abandoned.
2. Forfeiture - no use of water for three year period without legal excuse.
3. For a third violation of a condition of a water permit/right.
