REPORT ON APPLICATION NO. 2158-2
for Rimrock Presbyterian Church Camp
February 27, 1991

Application No. 2158-2 proposes to appropriate 15 gpm (0.033 cfs) from one well approximately 20 feet deep located in the SW 1/4 SW 1/4 of section 9, T1N R6E BHM in Pennington County. This ground water use has a claimed priority date of 1954 and is being used for institutional purposes by the church camp.

AQUIFER - QUATERNARY ALLUVIUM (ALQ)

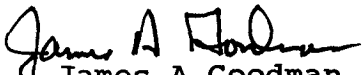

Based upon the surficial geology and the well location, the source of water is probably from alluvium associated with Rapid Creek. The alluvium is underlain by Precambrian rocks which can also serve as a water source. The information supplied with the application indicates this is a 20 feet deep well with 6 inch casing and has a static water level of about 15 feet below land surface. The affidavit submitted with the application indicates the well has been in use since 1954 with an estimated use of 15 gpm.

REVIEW OF EXISTING WATER PERMITS/RIGHTS

There are no other nearby water permits/rights in this immediate area. This diversion is very small and intermittently used.

CONCLUSIONS

1. Water is available. This well has been in use since 1954.
2. The water source is shallow alluvium or Precambrian rock both of which are hydraulically connected to Rapid Creek. This water should be tested periodically for bacterial contamination to determine if safe to use.
3. The application does qualify for a Vested Right.
