Ms. Dobney:

This letter is in response to your questions about Water Permit No. 2003-3 for Glen Garrett. As of this date, this permit had not been inspected, therefore a license has not been issued. Because of the workload and limited staff I cannot give you a date when this permit will be licensed. I'm not sure I understand your question about extending this permit. South Dakota Law provides a time period of five years for the applicant to construct his system with an additional four years to put the water to beneficial use. Anytime after the five year construction period expires an inspection will be made as to the extent of development of the water permit. Neither the date for construction of works or the date for application of water to beneficial use is an expiration date of the permit. The permit remains valid and in force as long as water is being put to beneficial use within the bounds of the permit. The burden of inspection and licensing falls on this office and is our responsibility to complete. I hope this answers your questions and concerns. If you have any further questions, please contact this office.

Dear Sirs:

On October 6, 1988, the Water Management Board adopted rules to implement a 1988 law for application of chemicals through irrigation systems. The rules establish equipment standards, performance standards and installation requirements for irrigation systems that apply chemicals (fertilizers, insecticides, or herbicides) with irrigation water.

You have indicated on your 1988 Water Management Board Irrigation Questionnaire that you do apply chemicals with irrigation water. A copy of the new rules for chemigation are enclosed for your information.

The new standards include:

- * a check valve between the irrigation pump and the point of chemical injection;
- * a vacuum relief valve on top of the pipeline between the irrigation pump and the irrigation pipeline check valve;
- * a low-pressure drain on the bottom of the pipeline between the irrigation pump and the irrigation pipeline check valve;
- * a chemical injection line check valve between the chemical injection pump and the point at which the chemical is injected into the irrigation line; a second check valve is required if the chemical injection pump is not a positive displacement pump;
- * an interlock system which ensures that the chemical injection pump will stop whenever the irrigation pump stops;
- * an inspection port between the irrigation pump and the check valve on the irrigation line;

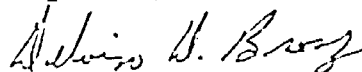

Each of these equipment requirements are discussed more thoroughly in Sections 74:02:09:05 through 74:02:09:10 of the enclosed rules. Appendix A contains diagrams of the arrangements of these anti-pollution devices.

The equipment must be installed according to the manufacturer's specifications, calibrated, and maintained in good working condition. All chemical product labels must be followed and warning signs must be posted. These rules also require reporting of all spills, accidents, and system malfunctions. A 24-hour telephone number is provided.

The chemigation rules contain notification and record keeping requirements. Prior to using chemigation, notification must be given to the Chief Engineer on the enclosed Form 1C. Information that must be provided in this notification includes the water permit or right number, the name, address, and telephone number of the water permit or right holder and of the system operator, and the legal description of the lands on which the system is located. A record of the name, quantity, dates and hours of each chemical applied must be provided to the Chief Engineer on Form 2C. A copy of this form is also enclosed for your information. It will be mailed with the annual irrigation questionnaire and must be returned with the questionnaire by the date specified. If you have any questions regarding these rules or need additional copies of the forms, please contact Susan Bowar, Water Rights Engineer (605-773-3352).

Very truly yours,

for JOHN HATCH, Chief Engineer

Dear Mr. Braun:

Enclosed are Water Permit and Water License No. 5778-3. Water License No. 5778-3 is the final document which completes the process of obtaining a water right.

On May 4, 1993, you submitted a \$150 filing fee for Permit No. 5778-3. It was later determined the filing fee for the permit should have been \$50. The license fee is an additional \$50; therefore, the remaining \$50 will be refunded to you. You should receive this refund in a couple of weeks.

As long as you use the water beneficially, as stated in the Water License, State Water Laws provide that you have a continuing right to use the water.

Very truly yours,

JOHN HATCH, Chief Engineer
