Dear Mrs. Wiedrick:

Your WI-1 form has been received and it is being forwarded to the State Conservation Commission along with copies of this letter and the water analysis.

There is no reason why this water should cause any difficulty in irrigating the soils of the vicinity which you intend to irrigate. However, the soils are subject to erosion in several parts of the 2280' you have in mind. All of the soil area mapped as Buse complexes (B_u) on the Brookings County Soil Map has slopes ranging from 9-18% and a traveling sprinkler on this kind of land could cause serious problems with erosion of the soil and difficulty in movement of the sprinkler system, especially when in row crops. If the land is planted to alfalfa or alfalfa and brome you should have very little trouble with the systems getting mired down and breaking. Many systems give serious trouble in breaking at the junctions or twisting the pipe when trying to move over this kind of topography. For these reasons I strongly advise you to keep the sloping areas in a covered condition with alfalfa or alfalfa/brome mixture. The soils mapped as Kramburg and as Lismore and Estelline are all gently rolling to undulating and there shouldn't be any problem with a traveling sprinkler system.

Another caution is that you should not use a nozzle with an application rate greater than the intake rate of the soil. This intake rate on the Lismore silty clay loam is probably in the vicinity of .35" per hour. And so, your nozzle size should be purchased according to that application rate.

Sincerely yours,

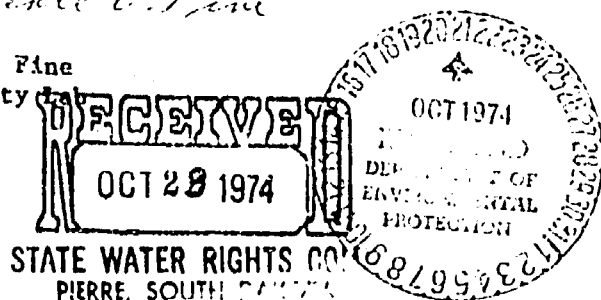

Lawrence O. Fine
