Dear Mr. Holm:

The W-1 form, which you brought to the office recently, and a copy of this letter and a copy of the water analysis for the well in the SW 1/4 of Sec 32 are being forwarded to the State Conservation Commission.

Attached to this letter please find a copy of Extension Circular 654 with the approximate quality of the water in this well and the one for your son Phil denoted by the encircled red crosses on the back cover.

You will note that this water, although considerably more salty than the one from your son's well, is really somewhat better in that it does not have near as high a sodium hazard. The sodium adsorption of this is 4.14 which puts it right on the edge of the low sodium hazard in total salinity group from 150 to 2250 or "high" total salinity.

I recommend that in the development of this water supply you use primarily crops of alfalfa and alfalfa-grass, and that you take care to irrigate fully and thoroughly in the fall or early spring about one year out of every four or five so as to improve the chances of spring rains leaching the salts down out of the root zone.

If salt accumulation does begin to take place as indicated by grayish or whitish surface crusts, please get in touch with your extension agent or Mr. Darrel Pahl, Extension Water Resources Specialist at SDSU.

Sincerely yours,

*L. O. Fine*

SOILS MAP (attached)

SOILS LEGEND

2.5 Enet loam, 0 to 2 percent slopes

The Enet are moderately deep, well drained, fine loamy soils formed in loamy alluvial materials overlying sand and gravel at 20 to 30 inch depths. Permeability is moderate above the sands and gravels. Clay loam glacial till is below 5 feet depths in some places.

26A Dudley-Stickney silt loams, 0 to 3 percent slopes.

These soils are a small part of the area. The unit consists of moderately well drained soils with 4 to 10 inches of friable loamy surfaces over dense claypan subsoils. These soils have very slow permeability and soft in the subsoil.

29A Tetanka-Dudley silt loams, 0 to 3 percent slopes

These soils occur as small narrow areas. The unit consists of somewhat poorly drained soils with 4 to 10 inches of friable loamy surfaces over dense claypan subsoils. Many enclosed depressions are included in the unit.

52A Carthage sandy loam, 0 to 2 percent slopes

This unit consists of well and moderately well drained soils consisting of sandy materials overlying clay loam glacial till. Depth to the clay loam materials varies from 20 inches to more than 60 inches. Permeability is moderately rapid in the sandy loam upper part and moderately slow in the clay loam underlying materials. The clay loam underlying materials are firm and contain many shale fragments. Nests of gypsum are common below 40 inch depths in the clay loam materials.

101A Handley Prosper loam, 0 to 2 percent slopes

This unit consists of deep well and moderately well drained loamy soils with calcareous substratum. The subsoils contain 30 to 35% clay. Depth to the calcareous clay loam substratum ranges from 18 to 36 inches. Permeability is moderately slow through the profile. These areas have firm clay loam materials with many shale fragments occurring below 36 inch depths. Nests of gypsum are common in the firm clay loam underlying materials. Included within these areas are many small enclosed depressions.

Dear Mr. Hohm:

I am writing to acknowledge receipt of the 2014 irrigation questionnaires for Water Right Nos. 243-3, 580-3 and 2181-3. You may disregard the January 16, 2015, "Notice" concerning reporting requirements for these water rights. The information was received in our office prior to the Water Management Board meeting and the issue is no longer on the agenda.

It is my understanding from the notation you wrote on the questionnaires that you now own the land described in the water rights. Enclosed are partially completed Notice of Transfer of Ownership forms for filing the ownership changes. Upon completion, please sign the forms and return them to our office with a required filing fee of \$50.00 each (total of \$150). The check or money order for the fee can be made payable to the Water Rights Program.

I have enclosed copies of the water rights for your records. If I have misunderstood and you do not own the land but want the annual questionnaires directed to you as operator, please let me know.

Sincerely,

Genny McMath

In the event you do not have the original forms, enclosed are partially completed forms for use in filing the ownership changes. Please review the forms and make any necessary corrections. Upon completion, please sign and return them to our office with a required filing fee of \$50.00 each (total of \$150). Dear Mr. Hohm:

On February 17 and May 12, 2015, transfer of ownership forms were sent to you for filing ownership changes on Water Right Nos. 243-3, 580-3 (Clarence Hohm) and 2181-3 (Jim Hohm). This was done based on the information supplied on the 2014 irrigation questionnaires.

In the event you do not have the original forms, enclosed are partially completed forms for use in filing the ownership changes. Please review the forms and make any necessary corrections. Upon completion, please sign and return them to our office with a required filing fee of \$50.00 each (total of \$150). The check or money order for the fee can be made payable to the Water Rights Program.

If your notation on the forms was to notify us that you are the operator and would like the annual irrigation questionnaires sent directly to you, this can be done without having to go through the ownership change process. If you now own the land and wish to have the water rights listed in your name, filing the transfer forms and payment of the fees will be required.

Please touch base with me to let me know how you wish to proceed. It is important to have up to date names and addresses in the files to ensure you receive all correspondence concerning the water rights.

Sincerely,
