Dear Mr. Schneideman:

We have received your WI-1 form and the soil information contained thereon is satisfactory.

I am enclosing herewith for your keeping the original copy of the report of analysis of water sample #76-233 submitted here about 2 weeks ago. I am also enclosing a copy of AES publication #13 with the quality of this water for irrigation purposes plotted approximately by means of a red cross in the chart on the outside back cover.

As you will see, this is quite good water, being medium in salinity and low in sodium. Therefore, there is no chemical hazard anticipated either with salt accumulation or sodium-caused dispersion of clays and loss of soil structure. Thus, there should be no difficulty in the use of this water.

A copy of this letter, and of the water analysis are being sent, along with your WI-1 form to the State Conservation Commission for their action.

Sincerely yours,

Dear Mr. Schneiderman:

On October 6, 1988, the Water Management Board adopted rules to implement a 1988 law for application of chemicals through irrigation systems. The rules establish equipment standards, performance standards and installation requirements for irrigation systems that apply chemicals (fertilizers, insecticides, or herbicides) with irrigation water.

You have indicated on your 1988 Water Management Board Irrigation Questionnaire that you do apply chemicals with irrigation water. A copy of the new rules for chemigation are enclosed for your information.

The new standards include:

- * a check valve between the irrigation pump and the point of chemical injection;
- * a vacuum relief valve on top of the pipeline between the irrigation pump and the irrigation pipeline check valve;
- * a low-pressure drain on the bottom of the pipeline between the irrigation pump and the irrigation pipeline check valve;
- * a chemical injection line check valve between the chemical injection pump and the point at which the chemical is injected into the irrigation line; a second check valve is required if the chemical injection pump is not a positive displacement pump;
- * an interlock system which ensures that the chemical injection pump will stop whenever the irrigation pump stops;
- * an inspection port between the irrigation pump and the check valve on the irrigation line;

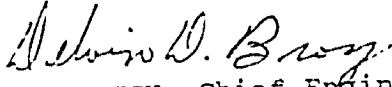

Each of these equipment requirements are discussed more thoroughly in Sections 74:02:09:05 through 74:02:09:10 of the enclosed rules. Appendix A contains diagrams of the arrangements of these anti-pollution devices.

The equipment must be installed according to the manufacturer's specifications, calibrated, and maintained in good working condition. All chemical product labels must be followed and warning signs must be posted. These rules also require reporting of all spills, accidents, and system malfunctions. A 24-hour telephone number is provided.

The chemigation rules contain notification and record keeping requirements. Prior to using chemigation, notification must be given to the Chief Engineer on the enclosed Form 1C. RE: Vested Water Right Nos. 166-3 and 187-3 and Water Right No. 2690-3

Mr. Schneiderman called in reference to my letter regarding filing of ownership changes for Vested Water Right Nos. 166-3 and 187-3 and Water Right No. 2690-3.

He indicated his father is deceased and the land is now in a trust. He has the option to purchase the property and for now, would like the water rights left as they are until a decision is made on ownership.

He requested that for the time being just send all correspondence, including the annual irrigation questionnaires, to his attention.
