SOIL RESTRICTIONS:

THE SOIL(S) LISTED BELOW CANNOT BE IRRIGATED:

DtA - Dudley-Tetonka complex soils are non-irrigable soils being subject to ponding, dense clay pan, and excess sodium to the extent of suppressing crop growth.

RECOMMENDED MANAGEMENT:

1. Water should not be applied more than NA times during the irrigation season.
2. Each uninterrupted application (one rotation of center pivot) should be of at least NA inches of water.
3. ☒ Yes ☐ No Surface drainage suggested on see below.
4. ☐ Yes ☐ No Subsurface drainage suggested on _____.
5. ☒ Deep tillage (for the purpose of aiding movement of water through dense subsoil).
COMMENTS: Pertains to the East 2/3's of NE4-27-110-61.
6. ☐ Heavy fall application of irrigation water.
7. Type of irrigation system recommended for use on this application pivot.

GENERAL COMMENTS:

Because only 5 to 10 acres on the extreme east edge are involved, these soils need not change your plans for a full quarter pivot, but management angles can be employed.

The outer 2 or 3 towers for a length of 1000 to 1200 feet on the extreme east side will be affected. Perhaps the easiest management angle is permanent vegetation and elevate the wheel tracks. A more permanent solution is excavating an area off of the pivot 400 to 500 feet north of the southeast corner of the quarter. This excavation should be large enough to hold 2 to 3 acre feet of water. The excavated dirt should be used on the broad flat to the north, being sure that slope for surface drainage to the excavated area is accomplished. Another alternative is to automatically nozzle off the outer 2 or 3 sprinklers for 1000 to 1200 feet.

Dear Mr. Polly:

On October 6, 1988, the Water Management Board adopted rules to implement a 1988 law for application of chemicals through irrigation systems. The rules establish equipment standards, performance standards and installation requirements for irrigation systems that apply chemicals (fertilizers, insecticides, or herbicides) with irrigation water.

You have indicated on your 1988 Water Management Board Irrigation Questionnaire that you do apply chemicals with irrigation water. A copy of the new rules for chemigation are enclosed for your information.

The new standards include:

- * a check valve between the irrigation pump and the point of chemical injection;
- * a vacuum relief valve on top of the pipeline between the irrigation pump and the irrigation pipeline check valve;
- * a low-pressure drain on the bottom of the pipeline between the irrigation pump and the irrigation pipeline check valve;
- * a chemical injection line check valve between the chemical injection pump and the point at which the chemical is injected into the irrigation line; a second check valve is required if the chemical injection pump is not a positive displacement pump;
- * an interlock system which ensures that the chemical injection pump will stop whenever the irrigation pump stops;
- * an inspection port between the irrigation pump and the check valve on the irrigation line;

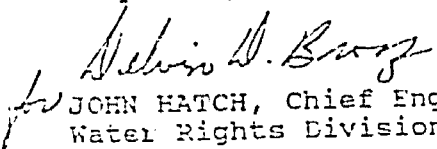

Each of these equipment requirements are discussed more thoroughly in Sections 74:02:09:05 through 74:02:09:10 of the enclosed rules. Appendix A contains diagrams of the arrangements of these anti-pollution devices.

The equipment must be installed according to the manufacturer's specifications, calibrated, and maintained in good working condition. All chemical product labels must be followed and warning signs must be posted. These rules also require reporting of all spills, accidents, and system malfunctions. A 24-hour telephone number is provided.

The chemigation rules contain notification and record keeping requirements. Prior to using chemigation, notification must be given to the Chief Engineer on the enclosed Form 1C. Information that must be provided in this notification includes the water permit or right number, the name, address, and telephone number of the water permit or right holder and of the system operator, and the legal description of the lands on which the system is located. A record of the name, quantity, dates and hours of each chemical applied must be provided to the Chief Engineer on Form 2C. A copy of this form is also enclosed for your information. It will be mailed with the annual irrigation questionnaire and must be returned with the questionnaire by the date specified. If you have any questions regarding these rules or need additional copies of the forms, please contact Susan Bowar, Water Rights Engineer (605-773-3352).

Dear Mr. & Mrs. Cronin:

I am writing to acknowledge receipt of your 2008 irrigation questionnaire. You may disregard the January 23, 2009, "Notice" concerning reporting requirements for Water Right No. 2830-3A.

The information was received in our office prior to the Water Management Board meeting and your name has been deleted from the agenda.

If you have any questions, please contact me.

Sincerely,

A handwritten signature in cursive script that reads "Genny McMath".
