Dear Sirs:

In regard to a telephone conversation July 1, 1985, with Mrs. Aughenbaugh enclosed please find partially completed transfer forms for transferring ownership of Water Permit Nos. 3961-3 and 4245-3. Permit No. 4245-3 is currently listed under Dale Anderson's name; if no transfer is necessary please advise when returning the form.

The transfer forms should be checked over, dated and signed before a notary public before returning them to this office. A \$2.50 filing fee is required for each transfer. Upon receipt of the completed transfer forms and filing fees, the permits will be changed to the appropriate name.

South Dakota Water Law 46-5-30.3 requires Notice of any sale, conveyance, lease or other transfer of a Water Permit of Water Right to appropriate water to be filed with this office within ninety days.

A discrepancy was found with the legal description of lands in the SE $\frac{1}{4}$ Section 7, T111N, R56W listed under Permit 4245-3. When returning the transfer forms, please indicate which lands in the SE $\frac{1}{4}$ of Section 7 are irrigated.

Our primary concern is with the W $\frac{1}{2}$ SE $\frac{1}{4}$ of Section 7.

Your assistance in this matter will be appreciated. If you have any questions please contact our office.

(SOILS INFORMATION ON REVERSE SIDE)

SCALE

SOIL GROUPS FOR SPRINKLER IRRIGATION

51A	Fordville Loam	0-3%
59	Spottswood Loam	0-2%

These are well drained to somewhat poorly drained soils that are moderately deep over sand and gravel. They have loam or silt loam surface layers. The subsoil is loam, silty clay loam, or clay loam. The underlying materials at depths of 20 to 40 inches is coarse sand or sand and gravel.

These soils have low available water capacity where the sand and gravel is about 20 to 25 inches in depth. Water will not enter the gravelly substratum until the soil above the gravel is saturated. Permeability is moderate above the sand and gravel and rapid or very rapid in the sand and gravel.

Spottswood soils have a seasonal water table that fluctuates from 3 to 6 feet or more. Specific site investigation should be made to determine feasibility of irrigation because of the underlying gravel and possible water table.

Generally, these soils are suitable for irrigation with medium salinity and low sodium water. If water of high salinity or medium sodium is used, extra water should be applied for leaching purposes and salt tolerant crops may be required.

73A	Houdek Loam	0-2%
73B	Houdek Loam	3-6%
73C	Houdek Loam	6-9%

These are deep, well drained soils that have loam or silt loam surface layers and loam or light clay loam subsoils. The underlying material is loam or clay loam glacial till. Available water capacity is high. Permeability is moderate in the upper part of the soil and moderately slow in the lower part.

The more sloping soils are subject to erosion if water is applied too fast. Gullies could form in the wheel tracks of continuous move systems. The use of center pivot irrigation systems on these soils will usually result in trafficability and runoff problems.

Generally, these soils are suitable for irrigation with low salinity and low sodium water. Water of medium salinity maybe used when additional quantities of water are applied for leaching purposes. Use of higher hazard water will require additional internal drainage and the use of salt tolerant crops.

These soils are not suited to sprinkler irrigation on slopes greater than 9 percent.

SOIL GROUPS FOR SPRINKLER IRRIGATION

- 23 Tetonka Silt Loam 0-2%
26 Bonilla-Tetonka Silt Loam 0-3%

These are poorly or very poorly drained soils in closed depressions. They are usually ponded during wet seasons and would become ponded under irrigation. Continuous move irrigation systems are likely to get stuck in these soils.

Many of these soils are near irrigable soils and small areas may be irrigated along with irrigable soils. These areas will cause traction problems for continuous move irrigation systems and farm implements. Crops are likely to drown out or be very restricted in growth because of poor aeration in the root zone or an excess amount of sodium.

NAME OF APPLICANT Dale Anderson DeSmet, South Dakota

RECOMMENDED MANAGEMENT:

1. Water should not be applied more than 1, 2, 3, 4, 5, times during the irrigation season.
2. Each uninterrupted application (one rotation of center pivot) should be of at least 1, 2, 3, 4, inches of water.
3. ☒ Yes ☐ No Surface drainage suggested - to any area that may tend to pond water
4. ☐ Yes ☐ No Subsurface drainage suggested
5. ☒ Yes ☐ No Specific land areas that should be avoided
Tetonka (23) The small area in the S.W. corner can not easily be irrigated with a center pivot. Unless this area already has surface drainage or can be surface drained. It will serve as a catch basin for your irrigation or precipitation runoff.
6. ☒ Deep tillage (For the purpose of aiding movement of water through dense subsoils)
7. ☐ Heavy fall application of irrigation water

You may find it advisable to deep chisel the Moudak soil occasionally to help aid moisture penetration to the subsoil.

Deep chiseling after harvest followed by natural precipitation preferably (or irrigation) will also aid leaching of salt moisture with its salt constituents.

The extent of such deep-chisel practices, as to depth, spacing, frequency, will be dictated by your experiences.

Dear Mr. Anderson:

Our records show that Water Permit No. 3961-3, listed in the name of Milo Wallum covers irrigation of the NE $\frac{1}{4}$ Section 7, T11N, R56W. The WI-1 form in Permit No. 4245-3, listed in your name, indicates you purchased the above described land from Mr. Wallum. Therefore, Permit No. 3961-3 should be transferred to your name.

Enclosed is a partially completed notice of Transfer. Please check over, date, sign and have notarized before returning it to this office with a \$2.50 filing fee. The permit can then be transferred to your name.

South Dakota Water Law 46-5-30.3 requires Notice of any sale, grant, lease, conveyance or other transfer of a Water Permit or Water Rights to appropriate water to be filed with this office within ninety days.

There appears to be a discrepancy in the legal description on your Water Permit No. 4245-3. This office would request information as to which lands you are irrigating in the SE $\frac{1}{4}$ of Section 7, T11N, R56W, i.e., which quarter sections in the SE $\frac{1}{4}$.

Your assistance in this matter would be appreciated. If you have any questions, please contact this office.

Dear Mr. Aughenbaugh:

This will acknowledge receipt of the "Notice of Transfer" you submitted for transferring Water Permit No. 4245-3 to your name. However, as stated on the transfer form, a \$2.50 filing fee is required before the transfer can be completed.

You indicated when returning the Notice of Transfer for Permit No. 4245-3 that the lands under Permit 3961-3 were covered under No. 4245-3 and therefore no transfer was necessary. This is partially true. The lands under No. 3961-3 are covered under 4245-3, however, a separate transfer is required for the Permit itself.

Enclosed is another transfer form for Permit 3961-3. Please check over, sign, date and have the transfer form notarized before returning it to this office with the required filing fee of \$2.50. Upon receipt of the form and correct filing fee, Permit No. 3961-3 will be transferred to your name. Dear Mr. Aughenbaugh:

Enclosed is Water License No. 4245-3. This is the final water right document completing your process of obtaining a Water Right. Enclosed is Receipt No. 413859 in the amount of \$50.00 which you paid for the inspection and issuance of the Water License.

For your information SDCL 46-6-27 requires that if the owner of an existing well, such as the well authorized by Water Right No. 4245-3, constructs a replacement well and does not plan to use the old well, the old well is considered abandoned and must be plugged. Also, any well that is being used or is not considered abandoned must be valved and controlled, if flowing, or sealed and capped so that no leaking occurs either underground or at the surface.

As long as you use the water beneficially, as stated in the Water License, the State Water Laws provide that you have a continuing right to use the water. If you have any questions, please contact our office.

Very truly yours,

Dear Mr. Aughenbaugh:

Thank you for the prompt return of your 2005 irrigation questionnaire.

I read your note concerning the amount of acreage that should be described in the water right. In 1991, Norma Job with our program conducted a field investigation of your water use system for licensing purposes. She came up with a total of 205 acres being irrigated. I have included a copy of the license, inspection report and the map she prepared for your review.

It is possible that the area she outlined on the map and the acreage she came up with is off by a couple acres or so. It is however within a tenth of an acre of the numbers on the aerial photo printed by the ASCS Office (see green highlighted numbers on map). The outlined area on the map is what you are authorized to irrigate and I assume that's the whole area you are currently irrigating.

If you feel changes need to be made, let us know.
