R. N. Gaertner
City Auditor
City of Lennox
Lennox, South Dakota

Dear Mr. Gaertner:

Receipt is acknowledged of your October 6, 1936 letter concerning a new test well drilled for the city of Lennox.

A comparison between the chemical, or mineral analyses of water from the existing well # 1 and the new test well reveals that the two water sources are virtually similar. Both are high in total solids, sulfates, total hardness, iron and manganese. At the present time, only the latter three substances can be economically removed from the water. Your City is operating a treatment plant to remove iron and manganese and hardness has no particular public health significance; therefore, it can be concluded that the water from the new test well is satisfactory for public use (from the public health standpoint).

We recommend that the City engage a consulting engineer to prepare plans and specifications for this new municipal water well. At least two copies each of these documents should be sent to the State Water Resources Commission and the State Department of Health to obtain water rights and for review and approval of construction features with public health significance, respectively.

Both of the above-named agencies are interested in proper cement-grouting and spacing of water wells. As previously stated, this office is also concerned with other design features which have sanitary significance.

If we can be of further assistance, please do not hesitate to contact us.

Yours very truly,
