Dear Mr. Reigle:

In reviewing your soil and water compatibility application for Outlot D 13-93-59 = 82 acres, the irrigation staff is recommending a Conditional Approval of your application to the State Conservation Commission at their May 5, 1983 meeting. The Conditional Recommendation is based on your Eltree soils; due to soil texture and depth to glacial till. The Restrictions and Management Recommendations are as follows:

RESTRICTIONS:

EbE - Eltree - Ethan Complex, 9-40 percent slope. - This area is subject to rapid run off due to steep slopes. This area is restricted from irrigation because of steep slope and the erosion hazards. You may wish to level this area.

MANAGEMENT RECOMMENDATIONS:

In reviewing the soils of the intended area for irrigation we suggest management practices such as: leaving crop residue, conservation tillage, strip cropping and contour farming to control wind and water erosion. These practices will also conserve soil moisture.

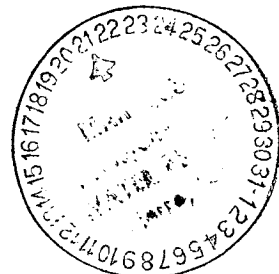

There are also small wet spots indicated by Ψ that may cause trafficability problems for short periods after irrigation or precipitation.

If you have any questions concerning your application please feel free to contact this office.

Sincerely,

Jim Stukel
Irrigation Program Director

PLEASE NOTE: Certain changes can be made in your permit within the five year construction period, usually without affecting the priority date provided an application to amend your permit is made within the five year period-i.e. changes in location or number of diversion points (wells) or location of land to be irrigated. Well locations for wells into the same aquifer can be moved up to 660 feet without application.

Applications to amend a permit after the five year construction period will be assigned a new priority date. Applications to change water sources, to add lands or increase original diversion rates, if approved will usually receive the date of the new application as a priority date regardless of the five year construction period.
