Dear Mr. Gatzke:

On Sept. 8, 1987 I spoke with you concerning two water permits which cover the SE 1/4 of Sec. 10 and SW 1/4 of Sec. 11 in T114N, R63W. To this date, you have not constructed the irrigation systems. However, you indicated that you still have plans to develop the systems.

The two permits, numbered 4712-3 and 4713-3, have time limits for construction which expired on May 1, 1986. If you would like to keep the permits, you must submit new applications to reinstate the expired permits. This can be accomplished by returning the enclosed application forms along with \$100.00 (\$50.00 per application). Please review the applications, make any additions or corrections, and sign them. All four copies (two per application) must be returned along with the fee.

After we receive the application back, the process of reinstating your permits can continue so that you may construct your irrigation systems. If you have any questions, please contact our office.

Sincerely,

James L. Wendte

REPORT ON APPLICATION NOS. 5162-3 AND 5163-3

ALLEN GATZKE

January 8, 1988

Application No. 5162-3 is to reinstate Water Permit No. 4712-3 to appropriate 2.28 cfs from one well 55 feet deep located near the center of the SW 1/4 of Section 11, T114N, R63W. The water is to be used to irrigate (160 acres in the SW 1/4 of Section 11, T114N, R63W, in Spink County. Application No. 5163-3 is to reinstate Water Permit No. 4713-3 to appropriate 2.25 cfs from one well 98 feet deep located near the center of the SE 1/4 of Section 10, T114N, R63W. The water is to be used to irrigate (158 acres) in the SE 1/4 of Section 10, T114N, R63W, Spink County.

Aquifer - Tulare Hitchcock (T-H)

The Tulare Hitchcock (T-H) is a Pliestocene (sand and gravel) outwash which is under predominantly water table conditions in this area. Well log and test hole data (Well Files, 1988) indicate aquifer saturated thickness would generally exceed 40 feet in this area. Test holes submitted with the applications indicate 80 feet to 35 feet of saturated thickness at each drill site.

The T-H aquifer underlies 96,600 acres and contains an estimated 360,000 acre-feet of recoverable water in Spink County (Hedges, 1982). The T-H is hydraulically connected with the T-H in Beadle County and The Tulare-Western Spink (T-WS) in Spink County. The potentiometric surface (water level) slopes south and east towards the James River with a gradient of 2-3 feet per mile. This indicates recharge occurs from rainfall and snowmelt fairly uniformly over the aquifer with discharges occurring along the James River and through existing irrigation diversions. Groundwater from the T-WS aquifer also moves into the T-H aquifer.

Estimated recharge rates vary from 0.83 inches per year (Kuiper, 1983) to 2.0 inches per year (Hedges, 1983). IN volumetric terms, this would be 6,680 acre-feet per year to 16,100 acre-feet per year, respectively.

Reported water use for the T-H aquifer is as follows:

1986	1622 acre-feet
1985	2356 acre-feet
1984	2193 acre-feet

Water use for the T-H has reached a maximum of about 3,000 acre-feet per year (Irrigation Report, 1986).

The Division of Water Rights measures one observation well, SP-80D, (Water Rights Division, 1988) located between these two permit applications. Water levels in this well are at or near the highest ever recorded indicating recharge. The Water Rights Division monitors 4 other wells, SP-80B, SP-80F, SP-77H and SP-77I within 3 miles of this area. Hydrographs for these wells show seasonal and yearly fluctuations caused by climatic changes but drawdowns associated with nearby high capacity wells are not evident. For this reason, interference is not expected to be a concern.

Review of Existing Water Permits

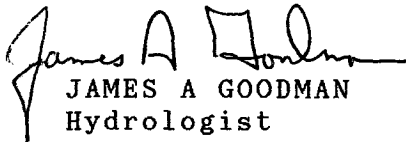

There are four existing water permits within a 1 mile radius of these applications.

Permit No.	Name	Diversion Rate	Well Depth	Use
3046-3	Nowell	1.85	60'	irri. (130 acres)
3065-3	Peterson	1.56	63'	irri. (110 acres)
3065A-3	Peterson	1.64	63'	irri. (115 acres)
3860-3	St. Clair	2.00	71'	irri. (160 acres)

These permits also obtain water from the T-H aquifer. There are other irrigation permits from this aquifer in Spink County.

Conclusions

1. Water is available from the T-H aquifer.
2. Water use as reported from the irrigation questionnaire is less than the average annual recharge for the aquifer.
3. Interference is not expected to be a problem. Drawdowns caused by pumping high capacity wells in this area do not cause fluctuations of observation wells in the area.
4. These are new permit applications that request reinstatement of existing permits which were not developed.

1. The well approved under this Permit will be located near domestic wells and other wells which may obtain water from the same aquifer. The well owner under this Permit shall control his withdrawals so there is not a reduction of needed water supplies in adequate domestic wells or in adequate wells having prior water rights.
2. This permit is approved subject to the irrigation water use questionnaire being submitted each year.
3. The well authorized pursuant to this permit shall be constructed by a licensed well driller and construction shall comply with Water Management Board Well Construction Rules, Chapter 74:02:04.

PLEASE NOTE: Certain changes can be made in your permit within the five year construction period, usually without affecting the priority date provided an application to amend your permit is made within the five year period-i.e. changes in location or number of diversion points (wells) or location of land to be irrigated. Well locations for wells into the same aquifer can be moved up to 660 feet without application.

Applications to amend a permit after the five year construction period will be assigned a new priority date. Applications to change water sources, to add lands or increase original diversion rates, if approved will usually receive the date of the new application as a priority date regardless of the five year construction period.
