RE: pending applications

COMMENTS:

Joe Plucker called regarding his two applications which we received 3-31-04. I told Mr. Plucker that his two maps needed to be signed by a qualified person. He said he would just submit two new maps.

Mr. Plucker also indicated that the well location for the application to irrigate 94 acres in the NW ¼ Section 14 should be the NE ¼ NW ¼ Section 14-T88N-R53W. I told him I would change his application accordingly.

REPORT ON WATER PERMIT APPLICATION NO. 6492-3

For Joseph Plucker

April 22, 2004

Application No. 6492-3 proposes to appropriate 1.89 cfs (850 gpm) from two wells approximately 40 feet deep located in the SW $\frac{1}{4}$ SE $\frac{1}{4}$ of section 4 to irrigate 140 acres located in the SE $\frac{1}{4}$ of section 4; all in T99N R53W in Turner County.

AQUIFER – VERMILLION WEST FORK (VWF)

The Vermillion West Fork is a predominantly surficial outwash (sand and gravel) that is under water table conditions in this area. The aquifer underlies about 18 square miles (11,520 acres) and contains an estimated 51,000 acre-feet of water in storage in Turner County (Lindgren, 1990). The aquifer extends into McCook County to the north blends into the Vermillion East Fork aquifer to the east and also blends into the much larger Parker Centerville aquifer to the south. The aquifer is also hydraulically connected to the West Fork of the Vermillion River. Ground water movement is from west to east and locally toward the river (Lindgren, 1990). This aquifer is relatively small and relatively thin and is probably very dependent upon flows in the river especially during extended drought conditions.

There is no test well log filed with this application. Information on the form 2A filed with the application indicates a possible 40 feet deep well with a 13 feet static water level. This site needs to be test drilled. The county study and other information in the area indicate that there is potential for water development at this site.

The Water Rights Program monitors three observation wells within a two mile radius of this application. TU-77O (located about one mile northeast and completed into the Vermillion East Fork aquifer), TU-80C (located about one and one-half miles south and completed into the Vermillion West Fork aquifer) and TU-77A (located about three miles southeast and completed into the Parker Centerville aquifer) are all completed into the surficial aquifers in this immediate area. The water level record for these wells show remarkable similarities. Water levels are affected by climatic conditions, that is, rising during wet years and gradually declining during dry years. The effects of area pumping are not obvious from the observation well hydrographs. Hydrographs for these three observation wells are included with this report (Water Rights, 2004).

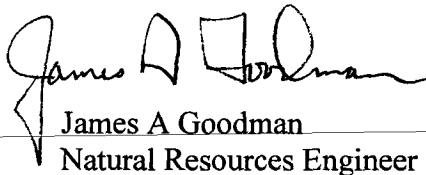

REVIEW OF EXISTING WATER PERMITS/RIGHTS

The nearest existing water permit is No. 5934-3 and the proposed wells for this application are located about one-quarter mile to the north of the diversion point (dugout) for water permit No. 5934-3. These wells should be far enough apart to minimize any potential impacts on the dugout. A dugout would be considered an inadequate well for regulatory purposes and offered no protection under state law. Even so, interference is not a concern because the distance between diversion points should be sufficient to minimize any potential effects of pumping. The applicant should test drill the area of this

application to determine the best site for a production well(s) and should attempt to stay at least 1,320 feet from the existing diversion points.

CONCLUSIONS

1. Water is available from the Vermillion West Fork aquifer.
2. The aquifer is under water table conditions in this area. Interference is not expected to be a concern. This well(s) will be located about one-quarter mile north from the existing irrigation dugout and this distance should be sufficient to minimize any potential impacts.
3. The well(s) authorized by this application must be constructed in accordance with SD Well Construction Standards.
4. The nearest existing permitted use is for irrigation from a dugout. A dugout is not considered an adequate well under SD statutes and would not receive protection from interference like a well would. Also, dugouts have a propensity to fill in over time, due to runoff coming into the dugout and due to pumping which tends to bring in sand into dugout. Both of these actions cause the dugout to become shallower over time and would limit the structures ability to produce water.

**RECOMMENDATION OF CHIEF ENGINEER FOR WATER PERMIT
APPLICATION NO. 6492-3, Joseph Plucker**

Pursuant to SDCL 46-2A-2, the following is the recommendation of the Chief Engineer, Water Rights Program, Department of Environment and Natural Resources concerning Water Permit Application No. 6492-3, Joseph Plucker, 45678 275th Street, Parker SD 57053.

The Chief Engineer is recommending APPROVAL of Application No. 6492-3 because 1) there is reasonable probability that there is unappropriated water available for the applicant's proposed use, 2) the proposed diversion can be developed without unlawful impairment of existing rights, 3) the proposed use is a beneficial use and 4) it is in the public interest with the following qualifications:

1. The wells approved under this Permit will be located near domestic wells and other wells which may obtain water from the same aquifer. The well owner under this Permit shall control his withdrawals so there is not a reduction of needed water supplies in adequate domestic wells or in adequate wells having prior water rights.
2. The wells authorized by Permit No. 6492-3 shall be constructed by a licensed well driller and construction of the well and installation of the pump shall comply with Water Management Board Well Construction Rules, Chapter 74:02:04 with the well casing pressure grouted (bottom to top) pursuant to Section 74:02:04:28.
3. This Permit is approved subject to the irrigation water use questionnaire being submitted each year.

Dear Dr. Kleinsasser:

I am writing in follow up to your telephone conversation with Eric Gronlund with our program. Eric indicated you would like Water Permit No. 6492-3, issued in the name of Joseph Plucker, to be transferred to your name.

Enclosed is a partially completed Notice of Transfer of Ownership form for filing an ownership change. Please review the form and complete as needed. Upon completion, please sign the form and return it to our office with a required filing fee of \$2.50. The check or money order for the fee can be made payable to the Water Rights Program.

It is our understanding that Mr. Plucker will be farming the land for you. If acceptable to you, we will mail the annual irrigation questionnaire to him since he would have the information required to complete the form. This does not alter ownership of the water permit.

If I can answer any questions for you, please contact me.

Sincerely,

Dear Dr. Kleinsasser:

Enclosed is Water License No. 6492-3. This is the final water right document completing your process of obtaining a Water Right. Also enclosed is a copy of the map prepared by the staff engineer who conducted the field investigation.

For your information SDCL 46-6-27 requires that if the owner of an existing well, such as the well authorized by Water Right No. 6492-3, constructs a replacement well and does not plan to use the old well, the old well is considered abandoned and must be plugged. Also, any well that is being used or is not considered abandoned must be valved and controlled, if flowing, or sealed and capped so that no leaking occurs either underground or at the surface.

As long as you use the water beneficially, as stated in the Water License, the State Water Laws provide that you have a continuing right to use the water. If you have any questions, please contact our office.

Sincerely,

Garland Erbele, Chief Engineer
