RE: Applications to Appropriate Water

To Whom It May Concern:

The Clay Rural Water System has taken note of the eleven applications to appropriate water in Riverside Township, Clay County and would like to provide comment.

The proposed site of these diversions is within two to six miles of the Clay Rural Water System well field. All but one of the diversions is located in the same aquifer - the Lower Vermillion-Missouri - as the Clay Rural Water well field.

Our initial concern regarding these applications is the impact it could have on the Clay Rural Water Systems' sole supply. Clay Rural Water supplies water to over 4,200 residents in southeast South Dakota.

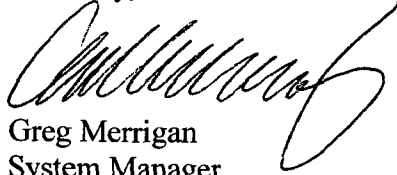

The applications request total withdrawals of 21.2 cubic feet per second. In discussions with Jim Goodman of your program, indications are that this withdrawal is not of concern for this aquifer. Mr. Goodman states that no safe withdrawal rate has been set for the aquifer, as the current diversion is not significant. Clay Rural Water acknowledges these statements.

An additional concern is that of possible use of the irrigation units for chemigation. The proposed diversions are located within one to five miles of the Clay Rural Water Source Water Protection Area. As chemigation can present a direct link to the aquifer in the event of an equipment malfunction, the possible threat to the aquifer could be significant. The Clay Rural Water System requests that any chemigation from these units require a permit and be routinely monitored.

In closing, the requested diversions are a substantial increase in the amount of irrigation that has historically taken place in this area. We hope DENR will review them closely and monitor all activity granted as a result of approval of the applications.

Thank you for the opportunity to comment and please contact me if you have any additional questions.

Sincerely,

RE: Applications to Appropriate Water

To Whom It May Concern:

This letter is a follow up to my letter of March 10, 2005 regarding the Applications to Appropriate Water from Hansen Properties in Riverside Township, Clay County.

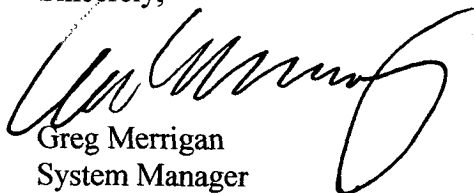

I have had the opportunity to meet with Mr. Hansen and discuss the applications. At his request I am writing this letter to clarify our comments.

The Clay Rural Water System is not opposed to the issuance of these permits and is not requesting a hearing before the Water Rights Board. We are not requesting the applicant obtain a special permit for any chemigation activities, only that it be inspected and regulated as per existing DENR protocol.

The intent of our original letter was to make our concerns known. If existing DENR regulations are followed it appears the diversions will not have an adverse effect on the Clay Rural Water System or its members.

Thank you again for the opportunity to comment and please contact me if you have any additional questions.

Sincerely,

Re: Water appropriation applications # 6563-3 through # 6573-3

Dear Eric,

Upon further discussion with my attorney, we will be recording the eleven water appropriation permits. To be most correct and cover any previously discussed forms, the permits should be issued in the name of: Roger A. Hansen, dba Hansen Properties, P.O. Box B, Centerville, SD (Ph. # 605-563-2212) Hansen Properties is a sole proprietorship of Roger A. Hansen, not a corporation or L.L.C.

Thank you for your assistance in the various steps along the way to get these permits issued.

RE: Applications to Hansen Properties to Appropriate Water; Clay County

To Whom It May Concern:

As a rural resident, customer of rural water, and landowner in Clay County, I have noted the 11 applications by Hansen Properties to appropriate water in Riverside Township, Clay County. I have also sought information from officials of the state Water Management Board, the South Dakota Geological Survey and the Clay Rural Water System in an effort to determine whether the proposed water appropriation would be in the public interest, as required by state water rights laws and regulations.

Though no safe withdrawal rate has been determined, both Jim Goodman, state Groundwater Supervisor, and Derric Iles of SD Geological Survey indicated their belief that, given the capacity of the Missouri-Lower Vermillion Aquifer, the withdrawal of 21.2 cubic feet per second will not pose a threat to the public water supply.

I have not, however, received satisfactory assurance from any of the several persons with whom I have spoken, that the use of the proposed irrigation systems for the application of chemicals and fertilizer will not pollute the aquifer, which is vital to the 4,200 residents who rely on the Clay Rural Water System. Given that no alternative source of water is available to county residents, I believe that the public interest, protected by state law, must ensure that no pollution of the aquifer be allowed.

Borings by the SD Geological Survey indicate that in at least four of the 10 sections for which permits are requested -- sections 11, 14, 22 and 28 -- the Missouri-Lower Vermillion is a shallow aquifer, possibly as near as 10 to 20 feet below the surface, and with little or no clay layer between the very porous sand and gravel soil and the water, a condition that presents the possibility of nitrogen or chemicals leaching into the aquifer, especially if water and or chemicals are over-applied, or in the case of equipment malfunction.

I understand that the SD Geological Survey has two monitoring wells in section two of Riverside Township, and that in the shallower of these two wells, nitrates above the drinking water standard of 10 milliliters per liter were detected in 2002. But these monitoring wells are up-gradient from the proposed 11 well sites, so they would not be likely to detect any pollution that might occur as a result of the proposed

developments.

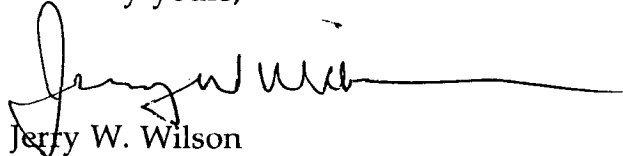

I understand that the Chief Engineer has tentatively determined that this project is in the public interest. I do not know whether the approval of these permits could lead to degradation of water quality for residents of Clay County at any future time, but if the county's water supply is in any way put at risk by this very large project, then I question whether the approval is in the public interest, or only a private interest.

I propose that one or two conditions be attached if these applications are to be approved:

1. Stipulate that no chemigation of any sort will be allowed over the shallow aquifer; and/or
2. Establish a monitoring well or wells down-gradient (i.e., between the closest of the proposed wells and the well-field of the Clay Rural Water System), and stipulate that any increase in nitrates or chemical pollutants detected by the monitoring well(s) will trigger the shut-down of these wells.

Thank you for your defense of the public interest. Nothing is more important to the public this year, in 10 years, in 100 years and far beyond, than clean, safe water.

Sincerely yours,

Dear Mr. Wilson:

The Water Rights Program received your letter regarding the eleven permit applications to appropriate water for irrigation filed by Roger Hansen. Since your letter was submitted after the March 14, 2005, published date to file a petition to intervene a hearing will not be scheduled before the Water Management Board. Water Rights law directs the Chief Engineer to issue the water permits as recommended.

We do however note your concerns regarding potential pollution to the aquifer from applying of chemicals and fertilizer through the irrigation systems. There are state requirements that irrigators, who apply chemicals through an irrigation system, must follow to prevent the sort of concerns which you express. These rules are intended to protect the environment by prohibiting the back flow of fluid towards the water source and shutting down the system if any component malfunctions. A copy of these rules is attached.

The handling, disposal, transportation and storage of fertilizers and pesticides are subject to additional requirements administered by the South Dakota Department of Agriculture. I encourage you contact the Department of Agriculture at (605) 773-4432 if you have questions on the regulations they administer.

If you have any questions on the water right permitting process, please feel free to contact us.

Sincerely,

REPORT ON WATER PERMIT APPLICATION NOS. 6571-3, 6572-3 & 6573-3  
For Roger Hansen  
February 1, 2005

Application No. 6571-3 proposes to appropriate 3.56 cfs (1,600 gpm) from two wells approximately 158 feet deep located near the centers of the SW  $\frac{1}{4}$  and SE  $\frac{1}{4}$  of section 27 to irrigate 250 acres located in the SW  $\frac{1}{4}$  and N  $\frac{1}{2}$  SE  $\frac{1}{4}$ , SW  $\frac{1}{4}$  SE  $\frac{1}{4}$  of section 27; all in T95N R52W in Clay County.

Application No. 6572-3 proposes to appropriate 1.33 cfs (600 gpm) from one well approximately 158 feet deep located in the W  $\frac{1}{2}$  SE  $\frac{1}{4}$  of section 28 to irrigate 78 acres located in the SE  $\frac{1}{4}$  of section 28; all in T95N R52W in Clay County. The applicant is requesting a diversion rate greater than the statutory limit of one cfs per 70 acres.

Application No. 6573-3 proposes to appropriate 1.84 cfs (830 gpm) from one well approximately 158 feet deep located in the NE  $\frac{1}{4}$  SW  $\frac{1}{4}$  of section 28 to irrigate 130 acres located in the SW  $\frac{1}{4}$ , S  $\frac{1}{2}$  NW  $\frac{1}{4}$  of section 28; all in T95N R52W in Clay County.

#### AQUIFER – LOWER VERMILLION MISSOURI (LVM)

The Lower Vermillion Missouri is a buried outwash (sand and gravel) that is probably under artesian conditions at this site. The aquifer underlies 100,800 acres and contains an estimated 1.5 million acre-feet of recoverable water in storage in Clay County (Hedges, 1982). The aquifer extends into Turner and Lincoln County to the north (where it blends into the Parker Centerville and Upper Vermillion Missouri aquifers), to the south where the aquifer blends into the Missouri Elk Point aquifer and also the aquifer is hydraulically connected to the Vermillion River. The aquifer may be under slightly confined conditions at this site but generally behaves like it is under water table conditions over most of Clay County. Ground water movement has a basic component of northwest to southeast with locally movement toward the Vermillion River (Christensen, 1967). This means most of the time the river is a discharge zone for ground water.

There are no test wells for these applications. There is sufficient information available from the county study, area test well and irrigation drilling, domestic well drilling and observation well data to allow these applications to be evaluated. Also, it appears from the county study mapping that the aquifer could be as much as 150 to 175 feet or more thick in this area (Christensen, 1967). It is likely that production wells at permit application Nos. 6571-3 and 6572-3 will exceed the depth of 158 feet but at the site of permit application No. 6573-3 will probably be less than 70 feet. Test drilling will be necessary to fully evaluate these proposed sites.

The Water Rights Program monitors an observation well CL-66A located about two miles north of these applications. Water levels for this well show good response to climatic conditions, that is, rising water levels during wet years (recharge) and gradually declining water levels during dry years. A hydrograph of this observation well is

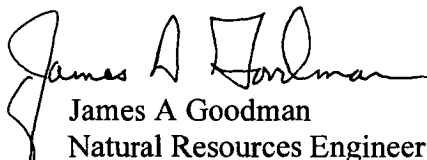

included with this report. In general, the water level record indicates that the aquifer is capable of sustaining additional withdrawals (Water Rights, 2005).

## REVIEW OF EXISTING WATER PERMITS/RIGHTS

There are no other existing irrigation wells within one mile of these applications. The nearest existing irrigation well (Water Right Nos. 973-3 and 215-3) which is located more than one mile north of these proposed applications. The wells for these applications are about one-half mile apart. This should be sufficient distance to minimize any potential impacts of overlapping cones of depression. Interference is not expected to be a problem. The observation well record presently does not indicate that drawdown created by pumping is significant. This is shown by the observation well hydrograph.

## CONCLUSIONS

1. Water is available from the Lower Vermillion Missouri aquifer.
2. The aquifer may to be under slightly artesian conditions at this site however, the aquifer behaves like a water table situation. Interference is not a concern.
3. The wells authorized by these applications must be constructed in accordance with SD Well Construction Standards.
4. No test wells were drilled for this application however there is sufficient information available from the county study, nearby wells and observation well drilling to evaluate these applications.

Vermillion River Water District**Report Of Examination Of Works And/Or Application Of Water To Beneficial Use**

TO: Chief Engineer, Water Rights Program, DENR, Foss Bldg., Pierre, SD 57501

I have this day, July 25, 2012, made a thorough examination of the water use system constructed by Roger Hansen, dba Hansen Properties of Centerville, SD holder of Permit No. 6571-3, bearing the priority of January 4, 2005 authorizing the diversion of 3.56 cu. ft. per second of the waters of Lower Vermillion Missouri aquifer for irrigation purposes, in Clay County.

I have to report on the conditions of the same as follows:

## A. Works used to divert the water:

**One well is in place with a submersible pump that is capable of producing 1.78 cfs (800 gpm).**

## B. Works used to transport water to place of use:

**For the pivot in the SE ¼ Sec. 27: Well head is 2,660 ft from the pivot point. Water from the well is conveyed to the pivot point in a buried PVC pipeline.**

**For the pivot in the SW ¼ Sec. 27: Well head is 30 ft from the pivot point. Water from the well is conveyed to the pivot point in an above ground PVC pipeline.**

**Both systems are powered by an electric 50 hp submersible motor.**

## C. Works used to apply water to beneficial use:

**For the pivot in the SE ¼ Section 27: one, seven-tower Zimmatic center pivot**

**For the pivot in the SW ¼ Section 27: one, seven-tower Zimmatic center pivot**

The systems are in the following condition SW ¼: good and SE 1/4: non-operational. The point of diversion is located as follows:

**Measurements made from the SW corner of Sec 27, T95N-R52W: 1,427 ft. north and 1,325 ft. east; NE ¼ SW ¼ Sec. 27, T95N-R52W; 96.97753° W, 43.0149° N**

The works are capable of diverting and conveying to the place of use 1.78 cu. ft. per second of water which is to be used for irrigation. Water has been put to beneficial use to the maximum extent as follows all in Sec. 27 T95N-R52W:

|             |         |             |         |             |         |             |       |
|-------------|---------|-------------|---------|-------------|---------|-------------|-------|
| NW ¼ SW ¼ - | 32 ac   | NE ¼ SW ¼ - | 35.5 ac | SE ¼ SW ¼ - | 33.5 ac | SW ¼ SW ¼ - | 32 ac |
| NW ¼ SE ¼ - | 33.5 ac | NE ¼ SE ¼ - | 31 ac   | SW ¼ SE ¼ - | 32 ac   |             |       |

comprising a total of 229.5 acres of land and the license should be issued for 1.78 cfs. Applicable permit qualifications have been complied with Yes. Exceptions to compliance are: None. Comments: Permit No. 6571-3 originally authorized two wells with a maximum diversion rate of 3.56 cfs. If the two pivots are two run simultaneously, a new permit will be required for the new well and the diversion rate required to run the pivot. The non-operational pivot had wind damage at the time. However, the 2012 irrigation questionnaire stated that all of the acreage was irrigated.

Dear Mr. Hansen:

Enclosed is Water License No. 6571-3. This is the final water right document completing your process of obtaining a Water Right. Included with your license is a map prepared by the staff engineer who conducted the field investigation.

For your information SDCL 46-6-27 requires that if the owner of an existing well, such as the well authorized by Water Right No. 6571-3, constructs a replacement well and does not plan to use the old well, the old well is considered abandoned and must be plugged. Also, any well that is being used or is not considered abandoned must be valved and controlled, if flowing, or sealed and capped so that no leaking occurs either underground or at the surface.

As long as you use the water beneficially, as stated in the Water License, the State Water Laws provide that you have a continuing right to use the water. If you have any questions, please contact our office.

Sincerely,

Jeanne Goodman, Chief Engineer

RE: aquifer designation

### COMMENTS:

Jensen (2025) as part of a review of the Lower Vermillion Missouri aquifer (LVM) determined that Water Right Nos. 973-3, 974-3, 1813-3, 1916-3, 3905-3, 4731-3, 5979-3, 6563-3, 6565-3, 6566-3, 6569-3, 6571-3, 6572-3, 6808-3, 6813-3, 6815A-3, 6817-3, 6818-3, 6819-3, 6821-3, 6822-3, 7001-3, 7003-3, 7383-3, & 7693-3, should have the aquifer reassigned. In reviewing the best information currently available for aquifer and management unit naming

conventions, the best aquifer designation for Water Rights previously listed is the Southern management unit of the Upper Vermillion Missouri aquifer (UVM:S) shown in Figure 1.

This change of aquifer designation, to the Southern management unit of the Upper Vermillion Missouri aquifer, does not represent a physical change in the water source. It is an update to the name of the aquifer materials to reflect the currently best available information for aquifer extents. This update to the aquifer name does not authorize any increase in the amount of water appropriated by Water Right Nos. 973-3, 974-3, 1813-3, 1916-3, 3905-3, 4731-3, 5979-3, 6563-3, 6565-3, 6566-3, 6569-3, 6571-3, 6572-3, 6808-3, 6813-3, 6815A-3, 6817-3, 6818-3, 6819-3, 6821-3, 6822-3, 7001-3, 7003-3, 7383-3, & 7693-3, relocation of existing wells, or completion of additional wells into the aquifer. Going forward, issuance of any pertinent documents will reflect the updated aquifer designation.
