REPORT ON WATER PERMIT APPLICATION NO. 6712A-3

For Peterson Farms

March 18, 2009

Application No. 6712A-3 proposes to amend water permit No. 6712-3 by transferring the permit approximately seven miles south from a proposed well located in the center of the SW $\frac{1}{4}$ of section 13, T115N R62W to a well located in the center of the NE $\frac{1}{4}$ of section 24, T114N R62W. The authorized diversion rate is 1.94 cfs for irrigation of 136 acres for No. 6712-3 and will be transferred in its entirety. The well authorized by Water Permit No. 6712-3 was never constructed and the lands not developed. The water source is the Tulare East James aquifer. No increase in the total number of acres irrigated or number of acres to be irrigated is authorized by this application.

AQUIFER - TULARE EAST JAMES (T-EJ)

The Tulare East James aquifer is fully appropriated based upon water use as determined by the Water Management Board at their July 12, 2006 hearing (Goodman, 2006).

At this proposed site the aquifer is under water table conditions. At the original site the aquifer was under artesian conditions. But test wells have not been drilled at either the original location or the proposed location. There are existing irrigation wells located in the NW $\frac{1}{4}$ and the SE $\frac{1}{4}$ of section 24, T114N R62W. This information along with the county study, observation wells in the area and other irrigation test wells and production wells allow for evaluation of this application.

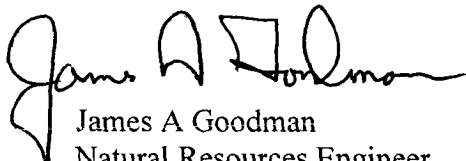

There is an observation well SP-77P located about $\frac{3}{4}$ mile southeast of the well for this application. Water levels for this well show good response to climatic conditions. Water levels rise in response to wet conditions (recharge) and gradually decline in response to dry years and pumping for irrigation. The hydrograph for this well does not indicate that pumping creates much of an effect (drawdown). A hydrograph for this observation well is included with this report (Water Rights, 2009).

REVIEW OF EXISTING WATER PERMITS/RIGHTS

The nearest existing water permit is No. 6711A-3 (4.34 cfs, irrigation of 304 acres) with wells located in the center of the NW $\frac{1}{4}$ and SE $\frac{1}{4}$ of section 24, T114N R62W. This proposed well would be approximately one-half mile east or north of the two existing wells. At this distance drawdown is not expected to be significant nor cause any adverse effects. Interference is not a concern.

CONCLUSIONS

1. This is an existing permit and may be transferred pursuant to SDCL 46-5-34. The applicant provides little justification to allow this transfer, however this standard has not been well established and is a Water Management Board decision. Also this request is apparently being made to conform with the April 11, 2009 construction deadline requiring one-fifth of the work be completed pursuant to the original permit No. 6712-3. This work has not been completed and this permit could be lost in a few weeks if this application is not approved.
2. The amount of water requested and amount of irrigated acres will not change.
3. The aquifer for both the existing and proposed sites is the Tulare East James Aquifer.
4. The aquifer is under water table conditions at this site. Drawdown created by pumping is not expected to be significant. Interference is not a concern.
5. The existing permit 6711A-3 is held by Oscar Inc. and this application is for Peterson Farms. These appear to be the same family.

E. Condition and Location:

1. The system is in excellent condition with the point(s) of diversion located as follows: approximately 1,340 feet south and 1,440 feet west of the NE corner Section 24 T114N, R62W (Lat 44.67222 Lon - 98.22622)
2. The works are capable of diverting and conveying to the place of use 1.78 cu. ft. per second of water (800 gpm) and is used for irrigation. Water has been put to beneficial use to the maximum extent as follows:

<u>Section 24, T114N, R62W</u>	
<u>NW ¼ NE ¼</u>	<u>33.75 acres</u>
<u>NE ¼ NE ¼</u>	<u>33.75 acres</u>
<u>SW ¼ NE ¼</u>	<u>33.75 acres</u>
<u>SE ¼ NE ¼</u>	<u>33.75 acres</u>

comprising a total of 135 acres of land and the license should be issued for 1.78 cfs.

3. All structures, wells and lands on map yes

F. Comments or other permit(s) associated with the project:

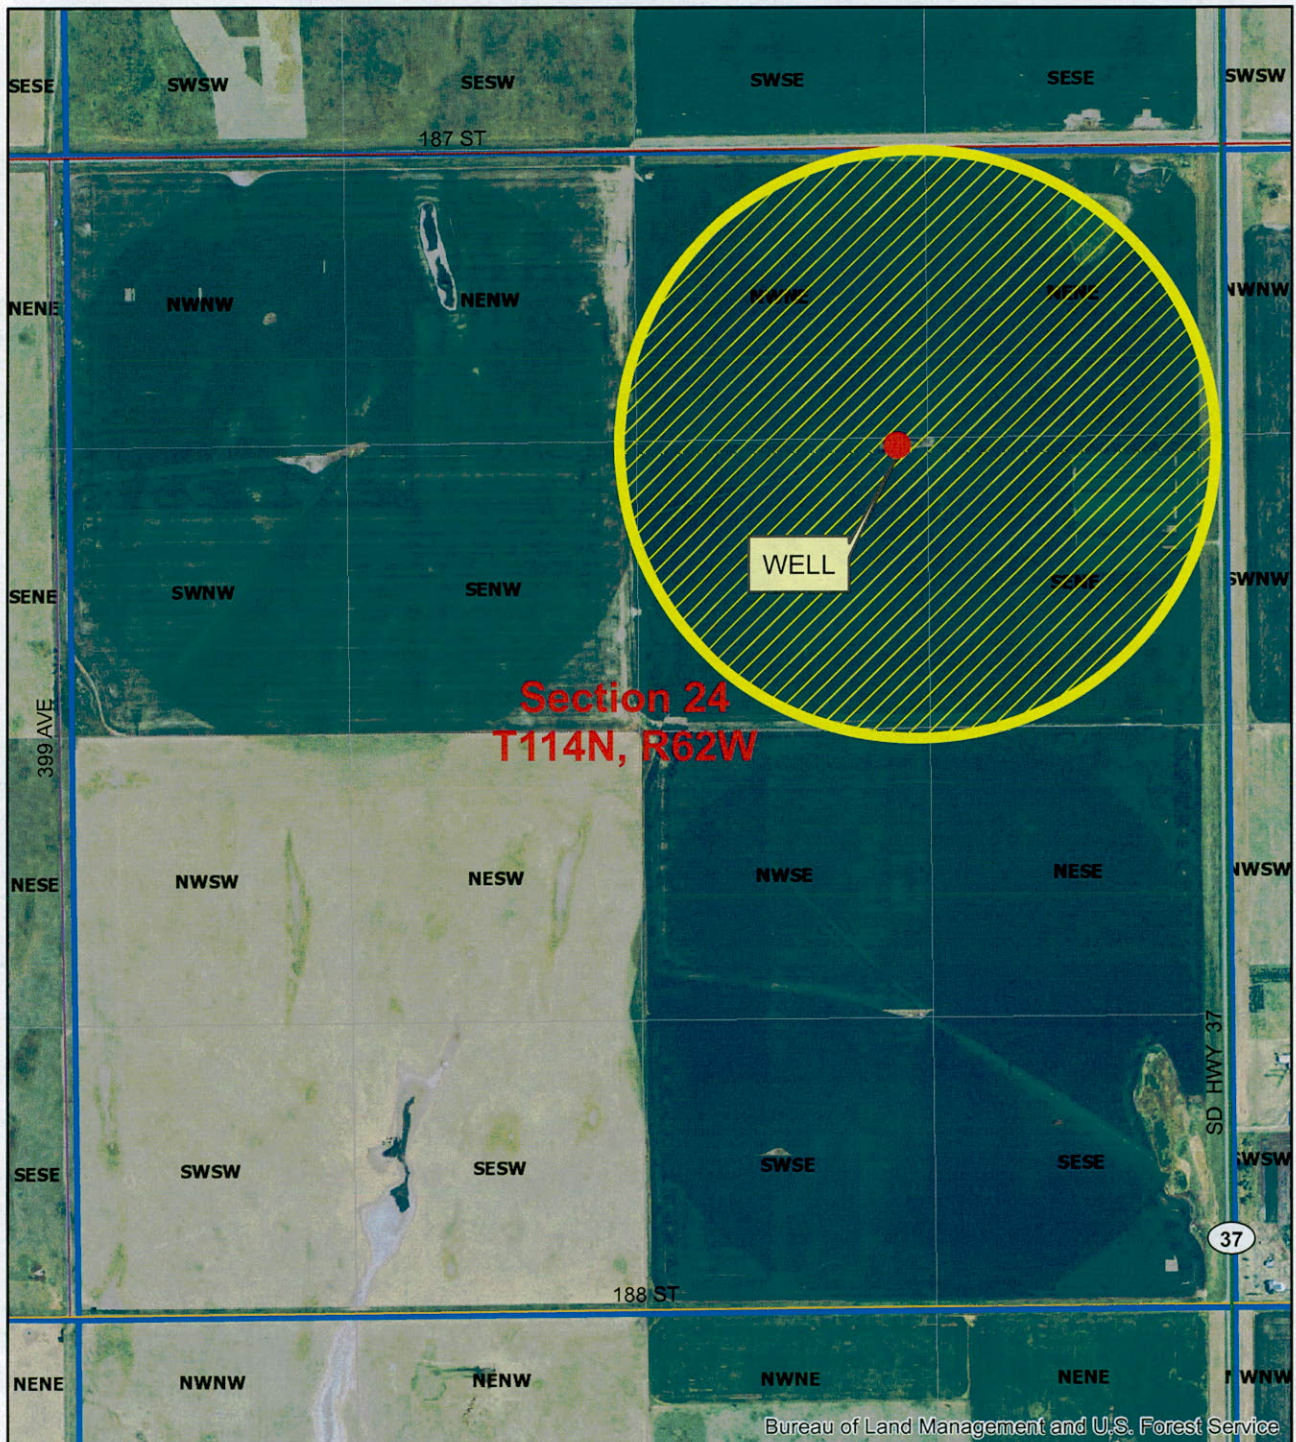

- System capacity is based largely on what Mr. Peterson stated the pivot produces which is (1.78 cfs) 800 gpm.
- Using ArcMap and map.google.com to arrive at 135 acres being irrigated.
- Water Permit No. 6712-3 should be incorporated into No. 6712A-3 during licensing since it provides the foundation for the priority date. It was not incorporated into Permit No. 6712A-3 during the permitting stage. The Water Right database for No. 6712-3 should be changed to insure that the diversion rate and irrigated acres are not double counted.

Dear Mr. Peterson:

Enclosed is Water License No. 6712A-3. This is the final water right document completing your process of obtaining a Water Right. Included with your license is a map prepared by the staff engineer who conducted the field investigation.

For your information SDCL 46-6-27 requires that if the owner of an existing well, such as the wells authorized by Water Right No. 6712A-3, constructs a replacement well and does not plan to use the old well, the old well is considered abandoned and must be plugged. Also, any well that is being used or is not considered abandoned must be valved and controlled, if flowing, or sealed and capped so that no leaking occurs either underground or at the surface.

Upon licensing, the applicable portions of Water Permit No. 6712-3 were incorporated into Water License No. 6712A-3. As long as you use the water beneficially, as stated in the Water License, the State Water Laws provide that you have a continuing right to use the water. If you have any questions, please contact our office.
