PROGRAM

Dear Mr. Erbele:

Today, I submitted several water permit applications. It is very important that we have these irrigation systems operable by this irrigation system. I understand this is a very busy time of the year, regarding permit applications. I apologize, but I must appeal to you to give this all possible speed. It is really vital that these applications be considered at the May Water Management Board hearing. Thank you.

Respectively,

COMMENTS:

Mr. Hansen stopped in the Water Rights Program office on February 20th to file 12 applications. He later that week mailed one additional application. I helped him complete the application form and the map. The maps depict the area he showed me that are proposed to be irrigated. In some instances the number of acres listed on the application appears to be greater than the area portrayed on the map. Mr. Hansen obtained the estimated acres from his irrigation system supplier. Upon development of the irrigation system, the water license will be issued for the amount of irrigation actually taking place.

**RECOMMENDATION OF CHIEF ENGINEER FOR WATER PERMIT
APPLICATION NO. 6810-3, Hansen Properties**

Pursuant to SDCL 46-2A-2, the following is the recommendation of the Chief Engineer, Water Rights Program, Department of Environment and Natural Resources concerning Water Permit Application No. 6810-3, Hansen Properties, c/o Roger Hansen, Box B, Centerville SD 57014.

The Chief Engineer is recommending APPROVAL of Application No. 6810-3 because; 1) there is reasonable probability that there is unappropriated water available for the applicant's proposed use, 2) the proposed diversion can be developed without unlawful impairment of existing rights, 3) the proposed use is a beneficial use and 4) it is in the public interest with the following qualification:

1. The well approved under this Permit will be located near domestic wells and other wells which may obtain water from the same aquifer. The well owner under this Permit shall control his withdrawals so there is not a reduction of needed water supplies in adequate domestic wells or in adequate wells having prior water rights.
2. The well authorized by Permit No. 6810-3 shall be constructed by a licensed well driller and construction of the well and installation of the pump shall comply with Water Management Board Well Construction Rules, Chapter 74:02:04 with the well casing pressure grouted (bottom to top) pursuant to Section 74:02:04:28. The well shall be located at least 1320 feet from the Vermillion River.
3. Pursuant to SDCL 46-5-6 which allows a greater diversion rate if the method of irrigation, time constraints, or type of soils so requires, Permit No. 6810-3 authorizes a maximum diversion rate of 1.56 cfs for the irrigation of 71 acres with an annual volume not to exceed 2 acre-feet of water per acre per year.
4. This Permit is approved subject to the irrigation water use questionnaire being submitted each year.

See report on application for additional information.

NOTE: The proposed well construction provided by the applicant indicates the well will be completed into the Upper Vermillion:Missouri Aquifer. The well construction will need to case off the overlying Parker Centerville Aquifer. If the well is completed into the Parker Centerville Aquifer a new water right specifying that source will need to be obtained.

REPORT ON WATER PERMIT NO. 6810-3
For Hansen Properties
March 22, 2007

Application No. 6810-3 proposes to appropriate 1.56 cfs from one well approximately 100 feet deep located in the N $\frac{1}{2}$ SW $\frac{1}{4}$ of section 3 to irrigate 71 acres located in the N $\frac{1}{2}$ SW $\frac{1}{4}$ of section 3; all in T95N R52W in Clay County.

AQUIFER – UPPER VERMILLION MISSOURI (UVM)

The Upper Vermillion Missouri is a buried outwash (sand and gravel) that is under confined or artesian conditions at this site. The Upper Vermillion Missouri underlies 11,200 acres and contains an estimated 168,000 acre-feet of recoverable water in storage in Clay County (Hedges, 1982). The aquifer extends into Turner County to the north, blends into the Lower Vermillion Missouri aquifer just south of this application and is hydraulically connected to the overlying Parker Centerville aquifer just to the south of the area.

Without test holes at this site it is impossible to identify the source of water for this application. Based upon surrounding information the area may be underlain by both the Parker Centerville aquifer (generally less than 50 feet in depth) and the Upper Vermillion Missouri aquifer (generally greater than 100 feet in depth). A well at this site could be completed into either aquifer but the deeper source would be more reliable. This is because of the potential for greater saturated thickness allowing for a higher capacity well.

The Water Rights Program monitors three observation wells within three miles of this application. One of these monitor wells TU-77N (located about one-half mile north) is completed into the Parker Centerville aquifer, and the other two monitor wells CL-80K (located about three miles east of this application) and CL-66A (located about three miles south of this application) are completed into the Upper Vermillion Missouri or Lower Vermillion Missouri aquifers respectively. Water levels for these wells show good response to climatic conditions, that is, rising water levels during wet years (recharge) and gradually declining water levels during dry years. In general, the water record indicates that the aquifer is capable of sustaining additional withdrawals (Water Rights, 2007). Hydrographs for these three observation wells are included with this report.

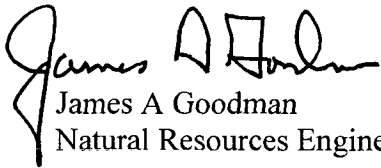

REVIEW OF EXISTING WATER PERMITS/RIGHTS

There was an existing water permit No. 3545-3 on this land that was cancelled because of forfeiture (system had not been constructed). There was a qualification on the original permit No. 3545-3 that required a 660 feet spacing from the Vermillion River. At that time the Water Rights staff was recommending to the Water Management Board a 1,320 feet minimum distance between wells to minimize potential impacts for wells completed in shallow water table aquifer. The purpose of this qualification was to minimize any potential impacts on flows in the river. The original permit also requested water from the

Parker Centerville aquifer which is in direct communication with the Vermillion River in this area. The nearest existing Parker Centerville aquifer well is located about three-fourths mile to the northeast and the nearest Upper Vermillion Missouri aquifer well is located about three-fourths mile northwest of this proposed well. This well should be moved 1,320 feet from the river. Also the water source needs to be identified. The site can be moved about 1,320 feet north of the proposed site and should not affect either of the existing water permits/rights. Interference should not be a concern.

CONCLUSIONS

1. Water is available from either the Parker Centerville or the Upper Vermillion Missouri aquifers.
2. This application because of the proposed well depth requests water from the Upper Vermillion Missouri aquifer. At this site the aquifer is probably under artesian conditions. Interference is not a concern. The observation well records indicate drawdown is not a concern.
3. The well authorized by this application must be constructed in accordance with SD Well Construction Standards. In this case the overlying Parker Centerville aquifer will have to be cased off.
4. Every effort should be made to space this proposed well at least 1,320 feet from Vermillion River even if the well is not completed into the Parker Centerville aquifer. This would minimize any potential impact upon the river flows.
5. The applicant is requesting a rate greater than one cfs per 70 acres. Because this system will be a full size center pivot, this rate will be necessary. The system will be limited to 142 acre feet annually.

Dear Mr. Hansen:

Enclosed are Water License Nos. 6810-3, 6812-3 and 6821-3. They are the final water right documents completing your process of obtaining Water Rights. Included with each license is a map prepared by the staff engineer who conducted the field investigation.

The investigation of your water use systems found the following:

Permit No.	Authorized under Permit (limited to 2 acre feet per acre per year)	Investigation findings	License issued
6810-3	1.56 cfs (700 gpm) 71 acres 142 acre feet per year	1.78 cfs (800 gpm) 65 acres	1.56 cfs (700 gpm) 65 acres 130 acre feet per year
6812-3	1.78 cfs (800 gpm) 117 acres 234 acre feet per year	1.78 cfs (800 gpm) 66 acres	1.78 cfs (800 gpm) 66 acres 132 acre feet per year
6821-3	2.00 cfs (900 gpm) 95 acres 190 acre feet per year	1.78 cfs (800 gpm) 83 acres	1.78 cfs (800 gpm) 83 acres 166 acre feet per year

Investigations are conducted for the purpose of issuing a water license for the project as constructed. Water Licenses cannot be issued over and above what was permitted. In each case, you are limited to the diversion rate, acreage and an annual acre feet limitation of 2 acre feet per acre as outlined in the water license.

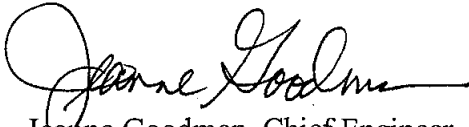

Information reported on your 2012 irrigation questionnaires indicate the authorized acre foot limitation was exceeded under No. 6810-3 and 6812-3. Reported water use for No. 6810-3 was 202.4 acre feet. The water license is limited to 130 acre feet. The water use reported for No. 6812-3 was 198.86 acre feet and the water license is limited to 132 acre feet. The Upper Vermillion Missouri Aquifer is currently under study by the SD Geological Survey. Please be aware that water use from all irrigators in the aquifer is being monitored and must be kept to authorized limits.

Page 2
Hansen Properties

For your information SDCL 46-6-27 requires that if the owner of an existing well, such as the wells authorized by Water Right Nos. 6810-3, 6812-3 and 6821-3, constructs a replacement well and does not plan to use the old well, the old well is considered abandoned and must be plugged. Also, any well that is being used or is not considered abandoned must be valved and controlled, if flowing, or sealed and capped so that no leaking occurs either underground or at the surface.

As long as you use the water beneficially, as stated in the Water License, the State Water Laws provide that you have a continuing right to use the water. If you have any questions, please contact our office.

Sincerely,

Re: Aquifer management unit redesignation for selected water rights/permits on Clay and Turner Counties

COMMENTS:

Review of a request to change diversion point for Water Permit No. 8790-3, authorized to withdraw water from the Upper Vermillion Missouri: South aquifer (UVM:S), determined the well they wished to use is authorized under authorized by Water Right No. 7384-3 Water Right No. 7384-3 does not currently have a management unit designated for withdrawal from the Upper Vermillion Missouri aquifer (Water Rights, 2025). In reviewing the best information currently available for aquifer and management unit naming conventions, the best aquifer and management unit designation for Water Right No. 7384-3 is the Southern management unit of the Upper Vermillion Missouri aquifer (UVM:S) as shown in Figure 1. Furthermore, there are an additional 25 other water rights/permits, see Table 1, which should have the UVM:S management unit assigned (Water Rights, 2025).

This addition of the management unit designation, to the Southern management unit of the Upper Vermillion Missouri aquifer, does not represent a physical change in the water source. It is an update to the naming convention to reflect the currently best available information for aquifer and management unit extents. This update to the aquifer management unit name does not authorize any increase in the amount of water appropriated by any of these water rights/permits, change in diversion rate, relocation of existing wells, completion of additional wells into the aquifer, or change of acres permitted for irrigation. Going forward, issuance of any pertinent documents will reflect the updated aquifer and management unit designation.
