RE: Twelve applications filed by Hansen Properties

COMMENTS:

Mr. Hansen stopped in the Water Rights Program office on February 20th to file 12 applications. He later that week mailed one additional application. I helped him complete the application form and the map. The maps depict the area he showed me that are proposed to be irrigated. In some instances the number of acres listed on the application appears to be greater than the area portrayed on the map. Mr. Hansen obtained the estimated acres from his irrigation system supplier. Upon development of the irrigation system, the water license will be issued for the amount of irrigation actually taking place.

**RECOMMENDATION OF CHIEF ENGINEER FOR WATER PERMIT
APPLICATION NO. 6815-3, Hansen Properties**

Pursuant to SDCL 46-2A-2, the following is the recommendation of the Chief Engineer, Water Rights Program, Department of Environment and Natural Resources concerning Water Permit Application No. 6815-3, Hansen Properties, c/o Roger Hansen, Box B, Centerville SD 57014.

The Chief Engineer is recommending APPROVAL of Application No. 6815-3 because; 1) there is reasonable probability that there is unappropriated water available for the applicant's proposed use, 2) the proposed diversion can be developed without unlawful impairment of existing rights, 3) the proposed use is a beneficial use and 4) it is in the public interest with the following qualification:

1. The well approved under this Water Permit No. 6815-3 will be located near domestic wells and other wells which may obtain water from the same aquifer. The well owner under this Permit shall control his withdrawals so there is not a reduction of needed water supplies in adequate domestic wells or in adequate wells having prior water rights.
2. The well authorized by Permit No. 6815-3 shall be constructed by a licensed well driller and construction of the well and installation of the pump shall comply with Water Management Board Well Construction Rules, Chapter 74:02:04 with the well casing pressure grouted (bottom to top) pursuant to Section 74:02:04:28.

REPORT ON WATER PERMIT NO. 6815-3
For Hansen Properties
March 27, 2007

Application No. 6815-3 proposes to appropriate 1.78 cfs from one well approximately 150 feet deep located in the center of the SW $\frac{1}{4}$ of section 15, T95N R52W to irrigate 147 acres located in the S $\frac{1}{2}$, S $\frac{1}{2}$ NE $\frac{1}{4}$, of section 15, T95N R52W in Clay County. This well will also be utilized to irrigate 127 acres already authorized by Water Permit No. 6563-3 and located in the SE $\frac{1}{4}$ of section 15, T95N R52W. If approved, this application will authorize a total diversion of 1.78 cfs to irrigate 274 acres.

AQUIFER – LOWER VERMILLION MISSOURI (LVM)

The Lower Vermillion Missouri is a buried outwash (sand and gravel) that appears to be under artesian conditions at this site. The Lower Vermillion Missouri underlies 100,800 acres and contains an estimated 1.5 million acre-feet of recoverable water in storage in Clay County (Hedges, 1982). The aquifer extends into Union County to the southeast, blends into the Upper Vermillion Missouri aquifer to the north, and blends into the Missouri Elk Point aquifer to the south. Just to the northeast of this application the Lower Vermillion Missouri aquifer appears to be hydraulically connected to the overlying Parker Centerville aquifer and is also hydraulically connected to the Vermillion River. Ground water movement has a basic component of northwest to southeast in Clay County with locally movement toward the Vermillion River (Christensen, 1967). This would mean most of the time the aquifer is discharging to the river.

A production well located about 1,900 feet northwest of this site indicates clay to a depth of 92 feet, followed by sand and gravel from 92 feet to 158 feet. The completed well had a static water level of 60 feet below land surface and was capable of producing 800 gpm with 25 feet of drawdown. This equates to a specific capacity of 32 gpm/ft of drawdown. This is a relatively small specific capacity for this aquifer. At this site a well would probably encounter 125 to 150 feet of saturated sands and gravels (Christensen, 1967). The well should be completed as deep as possible into the source for a more reliable well. This is because the greater saturated thickness allows for a higher capacity well.

The Water Rights Program monitors three observation wells within three miles of this application. One of these monitor wells TU-77N (located about three miles north) is completed into the Parker Centerville aquifer, and the other two monitor wells CL-80K (located about three miles northeast of this application) and CL-66A (located about one-half mile southeast of this application) are completed into the Upper Vermillion Missouri or Lower Vermillion Missouri aquifers respectively. Water levels for these wells show good response to climatic conditions, that is, rising water levels during wet years (recharge) and gradually declining water levels during dry years. In general, the water record indicates that the aquifer is capable of sustaining additional withdrawals (Water Rights, 2007). Hydrographs for these three observation wells are included with this report.

REVIEW OF EXISTING WATER PERMITS/RIGHTS

There is an existing irrigation well authorized by water permit No. 6563-3 located about 1,900 feet northwest of this site. Interference will occur however this is not expected to be adverse. At this distance between wells drawdown is not expected to be significant. This is shown by the observation well record.

CONCLUSIONS

1. Water is available from the Lower Vermillion Missouri aquifer.
2. Interference is not expected to be a concern. The observation well records indicate drawdown is not significant in this area (see hydrograph for observation well CL-66A). The aquifer appears to be under artesian conditions at the well site but is under water table conditions over much of this area.
3. The well authorized by this application must be constructed in accordance with SD Well Construction Standards and will be more than likely deeper than 150 feet. The applicant will need to do testing to evaluate the aquifer thickness in this area.
4. This is a new application but only the additional lands (147 acres) will get a new priority date. This permit appropriates an additional 294 acre-feet annually.

Dear Mr. Hansen:

Enclosed is Water License No. 6815A-3. This is the final water right document completing your process of obtaining a Water Right. Included with your license is a map prepared by the staff engineer who conducted the field investigation.

For your information SDCL 46-6-27 requires that if the owner of an existing well, such as the well authorized by Water Right No. 6815A-3, constructs a replacement well and does not plan to use the old well, the old well is considered abandoned and must be plugged. Also, any well that is being used or is not considered abandoned must be valved and controlled, if flowing, or sealed and capped so that no leaking occurs either underground or at the surface.

The applicable portions of Water Permit No. 6815-3 were incorporated into Water License No. 6815A-3. As long as you use the water beneficially, as stated in the Water License, the State Water Laws provide that you have a continuing right to use the water. If you have any questions, please contact our office.

Sincerely,

Jeanne Goodman, Chief Engineer
