RE: Twelve applications filed by Hansen Properties

COMMENTS:

Mr. Hansen stopped in the Water Rights Program office on February 20th to file 12 applications. He later that week mailed one additional application. I helped him complete the application form and the map. The maps depict the area he showed me that are proposed to be irrigated. In some instances the number of acres listed on the application appears to be greater than the area portrayed on the map. Mr. Hansen obtained the estimated acres from his irrigation system supplier. Upon development of the irrigation system, the water license will be issued for the amount of irrigation actually taking place.

**RECOMMENDATION OF CHIEF ENGINEER FOR WATER PERMIT
APPLICATION NO. 6816-3, Hansen Properties**

Pursuant to SDCL 46-2A-2, the following is the recommendation of the Chief Engineer, Water Rights Program, Department of Environment and Natural Resources concerning Water Permit Application No. 6816-3, Hansen Properties, c/o Roger Hansen, Box B, Centerville SD 57014.

The Chief Engineer is recommending APPROVAL of Application No. 6816-3 because; 1) there is reasonable probability that there is unappropriated water available for the applicant's proposed use, 2) the proposed diversion can be developed without unlawful impairment of existing rights, 3) the proposed use is a beneficial use and 4) it is in the public interest with the following qualification:

1. The well approved under this Permit will be located near domestic wells and other wells which may obtain water from the same aquifer. The well owner under this Permit shall control his withdrawals so there is not a reduction of needed water supplies in adequate domestic wells or in adequate wells having prior water rights.
2. The well authorized by Permit No. 6816-3 shall be constructed by a licensed well driller and construction of the well and installation of the pump shall comply with Water Management Board Well Construction Rules, Chapter 74:02:04 with the well casing pressure grouted (bottom to top) pursuant to Section 74:02:04:28.
3. Pursuant to SDCL 46-5-6 which allows a greater diversion rate if the method of irrigation, time constraints, or type of soils so requires, Permit No. 6816-3 authorizes a maximum diversion rate of 1.56 cfs for the irrigation of 96 acres with an annual volume not to exceed 2 acre-feet of water per acre per year.
4. This Permit is approved subject to the irrigation water use questionnaire being submitted each year.

REPORT ON WATER PERMIT NO. 6816-3
For Hansen Properties
March 28, 2007

Application No. 6816-3 proposes to appropriate 1.56 cfs from one well approximately 100 feet deep located in the N $\frac{1}{2}$ SE $\frac{1}{4}$ of section 21 to irrigate 96 acres located in the N $\frac{1}{2}$ SW $\frac{1}{4}$ and the N $\frac{1}{2}$ SE $\frac{1}{4}$ of section 21; all in T95N R52W in Clay County. The applicant is requesting a diversion rate greater than the statutory limit of one cfs per 70 acres.

AQUIFER – LOWER VERMILLION MISSOURI (LVM)

The Lower Vermillion Missouri is a buried outwash (sand and gravel) that appears to be under water table conditions at this site. The Lower Vermillion Missouri underlies 100,800 acres and contains an estimated 1.5 million acre-feet of recoverable water in storage in Clay County (Hedges, 1982). The aquifer extends into Union County to the southeast, blends into the Upper Vermillion Missouri aquifer to the north, and blends into the Missouri Elk Point aquifer to the south. Just to the northeast of this application the Lower Vermillion Missouri aquifer appears to be hydraulically connected to the overlying Parker Centerville aquifer and is also hydraulically connected to the Vermillion River. Ground water movement has a basic component of northwest to southeast in Clay County with locally movement toward the Vermillion River (Christensen, 1967). This would mean most of the time the aquifer is discharging to the river.

No test well was drilled for this application. At this site a well would probably encounter 150 to 175 feet of saturated sands and gravels (Christensen, 1967). The well should be completed as deep as possible into the source for a more reliable well. This is because the greater saturated thickness allows for a higher capacity well. Test holes and irrigation wells drilled in section 22 (next section to the east) indicate existing irrigation wells ranging from a depth of about 45 feet to 175 feet. There may or may not be a clay layer in the 45 to 50 feet range. At this site it may be possible to complete the irrigation well at a depth of about 50 feet. This depends mostly on how far up the hill the well is drilled or how far above the floodplain the well is located.

There is no major concern with the location of this well in relation to the Vermillion River. This location is sufficiently far enough from the river to minimize any potential impacts on river flows resulting from pumping.

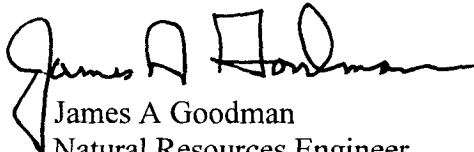

The Water Rights Program monitors an observation well CL-66A (located about one-half mile northeast of this application and completed into the Lower Vermillion Missouri aquifer. Water levels for this well shows good response to climatic conditions, that is rising water levels during wet years (recharge) and gradually declining water levels during dry years. In general, the water record indicates that the aquifer is capable of sustaining additional withdrawals (Water Rights, 2007). A hydrograph for this observation well is included with this report.

REVIEW OF EXISTING WATER PERMITS/RIGHTS

There is an existing irrigation well authorized by Water Right No. 973-3 located about one-half mile east of this site. Interference is not expected to be a concern. At this distance between wells drawdown is not expected to be significant. This is shown by the observation well record. There is also a water permit No. 6565-3 (located over one-half mile northwest) and water permit No. 6569-3 (located over one-half mile northeast) of this proposed well. Neither of these proposed sites is near enough to this application to cause concern over interference.

CONCLUSIONS

1. Water is available from the Lower Vermillion Missouri aquifer.
2. Interference is not expected to be a concern. The observation well records indicate drawdown is not significant in this area (see hydrograph for observation well CL-66A). The aquifer appears to be under water table conditions at the well site.
3. The well authorized by this application must be constructed in accordance with SD Well Construction Standards and will be more than likely shallower than 100 feet. The applicant will need to do testing to evaluate the aquifer thickness in this area.
4. The applicant is requesting a diversion rate greater than one cfs per 70 acres. Because of the design of this system (small center pivots doing only half of a circle) this diversion rate may be necessary.

TO: Chief Engineer, Water Rights Program, DENR, Foss Bldg., Pierre, SD 57501

I have this day, July 25, 2012, made a thorough examination of the water use system constructed by Roger A. Hansen, dba Hansen Properties of Centerville, SD holder of Permit No. 6816-3, bearing the priority of February 20, 2007 authorizing the diversion of 1.56 cu. ft. per second of the waters of Lower Vermillion Missouri aquifer for irrigation purposes, in Clay County.

I have to report on the conditions of the same as follows:

A. Works used to divert the water:

One well is in place with a submersible pump that is capable of producing 1.39 cfs (625 gpm)

B. Works used to transport water to place of use:

Well head is 10 ft from the pivot point. Water from the well is conveyed to the pivot point in an above ground PVC pipeline. The systems are powered by an electric 30 hp Franklin submersible motor.

C. Works used to apply water to beneficial use: **Center Pivot**

One, seven-tower Zimmatic center pivot

The system is in the following condition good. The point of diversion is located as follows:

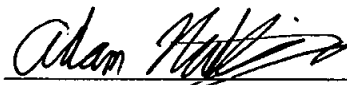

Measurements made from the SE corner of Sec 21 T95N-R52W: 1,976 ft. north and 1,270 ft. west; 43.03113° N, 96.98773° W; NE ¼ SE ¼ Sec 21 T95N-R52W

The works are capable of diverting and conveying to the place of use 1.39 cu. ft. per second of water which is to be used for irrigation. Water has been put to beneficial use to the maximum extent as follows all in Sec. 21 T95N-R52W:

NW ¼ SE ¼ -	11.5	NE ¼ SE ¼ -	21	SE ¼ SE ¼ -	8	SW ¼ SE ¼ -	7
-------------	------	-------------	----	-------------	---	-------------	---

comprising a total of 47.5 acres of land and the license should be issued for 1.39 cfs. Applicable permit qualifications have been complied with Yes. Exceptions to compliance are: none.

AUTHORITY

Pursuant to SDCL 46-5-30.5, acreage developed for irrigation outside of the area described on the permit may be licensed provided the following conditions are met:

NO INCREASE IN PERMITTED ACREAGE OR WATER APPROPRIATED:

The acreage developed for irrigation is 47.5 acres as compared to 96 acres authorized by the permit to be located in the N $\frac{1}{2}$ SE $\frac{1}{4}$ and N $\frac{1}{2}$ SE $\frac{1}{4}$ Section 21, T95N-R52W. Licensing of the permit will result in a reduction in the amount of water appropriated.

UNPERMITTED ACREAGE:

- **Contiguous to Permitted Acreage**

Yes, the developed unpermitted 15 acres, located in S $\frac{1}{2}$ SE $\frac{1}{4}$ Section 21, are contiguous with the developed permitted acreage, located in the N $\frac{1}{2}$ SE $\frac{1}{4}$ Section 21; all in T95N-R52W.

- **Owned by Same Property Owner**

Yes, the developed unpermitted acreage is owned by Hansen Properties.

- **Developed Prior to Expiration of Construction Period**

Yes, the developed unpermitted acreage was developed before May 14, 2012.

RECOMMENDED ACTION

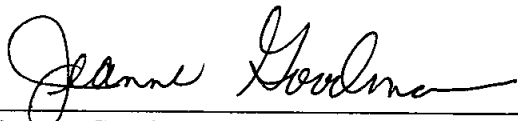

Based on the above criteria, it is recommended that the 15 acre area that was developed but not originally permitted be included in the water license.

Adam Mathiowetz, Natural Resources Engineer
Water Rights Program

The Chief Engineer makes a finding pursuant to SDCL 46-5-30.5 that:

This acreage change does not impair existing water rights and the overall project, as developed, is consistent with the original application. Licensing of the unpermitted acreage may occur without application or publication pursuant to SDCL 46-2A-4.

**STATE OF SOUTH DAKOTA
WATER LICENSE NO. 6816-3**

(1) Hansen Properties % Roger Hansen, PO Box B, Centerville SD 57014 made Application No. 6816-3, February 20, 2007 for a water permit to divert 1.56 cubic feet of water per second (cfs) from ground water (one well – Lower Vermillion Missouri Aquifer), Clay County, South Dakota for irrigation purposes. Permit No. 6816-3, with a priority date of February 20, 2007 was approved May 14, 2007 and issued to the applicant for diversion of water with construction of the described water supply system to be completed on or before May 14, 2012 and for the application to beneficial use of said water on or before May 14, 2016.

Water Permit No. 6816-3 authorizes irrigation of 96 acres in the N ½ SW ¼ and N ½ SE ¼ Section 21, T95N, R52W. The investigation of the water use system as it was constructed found the system to have been developed only in the SE ¼ Section 21. Pursuant to SDCL 46-5-30.5, the Chief Engineer made a finding that shift in acreage does not impair existing water rights and the overall project as developed is consistent with the original application.

(2) It is certified that the permit holder has complied with the provisions of South Dakota State Law relating to completion of the construction of the water supply system and is entitled to divert 1.39 cubic feet of water per second for beneficial use. The location of the diversion point is 1,976 feet north and 1,270 feet west of the SE corner of Section 21, T95N, R52W (NE ¼ SE ¼).

(3) The permit holder has complied with the provisions of South Dakota State Law relating to the application of water to beneficial use to irrigate the following land:

Section 21, T95N, R52W	NW ¼ SE ¼	11.5 acres
	NE ¼ SE ¼	21.0 acres
	SE ¼ SE ¼	8.0 acres
	SW ¼ SE ¼	7.0 acres
	Total	47.5 acres

(4) Pursuant to South Dakota Water Law 46-5-30.1 Hansen Properties, % Roger Hansen, PO Box B, Centerville SD 57014 the holder and/or owner of Water Right No. 6816-3 is issued a license to appropriate water, the right to use 1.39 cubic feet of water per second from ground water (one well – Lower Vermillion Missouri Aquifer) with a priority date of February 20, 2007 from the location specified in (2) of this license for irrigation purposes.

This license is subject to South Dakota Water Law, any limitations or conditions listed in Water Right No. 6816-3 and subject to the following qualifications:

- The well approved under this Permit will be located near domestic wells and other wells which may obtain water from the same aquifer. The well owner under this Permit shall control his withdrawals so there is not a reduction of needed water supplies in adequate domestic wells or in adequate wells having prior water rights.
- The wells authorized by Permit No. 6816-3 shall be constructed by a licensed well driller and construction shall comply with Water Management Board Well Construction Rules, Chapter 74:02:04 with the well casing pressure grouted (bottom to top) from the producing formation to the surface pursuant to Section 74:02:04:28. **The well was completed in February, 2008 by Hammond-Wetmore Drilling. A copy of the well log is on file with the Water Rights Program.**

- Pursuant to SDCL 46-5-6 which allows a greater diversion rate if the method of irrigation, time constraints or type of soils so requires, No. 6816-3 authorizes a maximum diversion of 1.39 cfs for the irrigation of 47.5 acres with an annual volume not to exceed 2 acre feet of water per acre per year. **Permit originally specified a maximum diversion of 1.56 cfs for irrigation of 96 acres; investigation found only 1.39 cfs and 47.5 acres developed.**
- This Permit is approved subject to the irrigation water use questionnaire being submitted each year.

Dear Mr. Hansen:

Enclosed are Water License Nos. 6816-3 and 6819-3. They are the final water right documents completing your process of obtaining water rights. Included with each license is a map prepared by the staff engineer who conducted the field investigation.

For your information SDCL 46-6-27 requires that if the owner of an existing well, such as the wells authorized by Water Right Nos. 6816-3 and 6819-3, constructs a replacement well and does not plan to use the old well, the old well is considered abandoned and must be plugged. Also, any well that is being used or is not considered abandoned must be valved and controlled, if flowing, or sealed and capped so that no leaking occurs either underground or at the surface.

As long as you use the water beneficially, as stated in the Water Licenses, State Water Laws provide that you have a continuing right to use the water. If you have any questions, please contact our office.

Sincerely,

Jeanne Goodman, Chief Engineer
