The Chief Engineer, on behalf of the Water Management Board, issues Water Permit No. 6987-3 to JFR-INV-LTD, LLC, c/o John Roost, PO Box 1877, North Sioux City SD 57049 authorizing the construction of the water use system and the placing of water to beneficial use subject to the following limitations, conditions and qualifications:

1. Water Permit No. 6987-3 appropriates an additional 0.45 cubic feet of water per second (cfs) and changes the location of the irrigated acreage authorized by Water Permit No. 5990-3. Water Permit No. 5990-3 appropriates 1.22 cfs from one well completed into the Missouri:Elk Point Aquifer (100 feet deep) located in NE $\frac{1}{4}$ NW $\frac{1}{4}$ Section 26 to irrigate 86 acres located in the NW $\frac{1}{4}$ Section 26; all in T91N-R50W. The system is capable of diverting more than the 1.22 cfs from the existing well to irrigate 86 acres located in the S $\frac{1}{2}$ SW $\frac{1}{4}$ Section 23 and NW $\frac{1}{4}$ NE $\frac{1}{4}$, N $\frac{1}{2}$ NW $\frac{1}{4}$, SE $\frac{1}{4}$ NW $\frac{1}{4}$ Section 26; all in T91N-R50W. This permit and Water Permit No. 5990-3 will authorize a total diversion rate of 1.67 cfs for irrigation of 86 acres.
2. The amount of the appropriation may not exceed 2 acre feet annually for each acre of land to which water is actually and beneficially applied for irrigation. The water is to be used during the following described annual period: March 1 – October 31.
3. The date from which applicant may claim right is February 25, 2008.
4. The date of approval of Permit No. 6987-3 is June 9, 2008.
5. Water rights obtained in compliance with the laws of the State of South Dakota may not be unlawfully impaired by this appropriation.

QUALIFICATIONS

1. The well approved under this Permit will be located near domestic wells and other wells which may obtain water from the same aquifer. The well owner under this Permit shall control his withdrawals so there is not a reduction of needed water supplies in adequate domestic wells or in adequate wells having prior water rights.
2. Pursuant to SDCL 46-5-6 which allows a greater diversion rate if the method of irrigation, time constraints, or type of soils so require, Permit Nos. 5990-3 and 6987-3, combined authorizes a maximum diversion rate of 1.67 cfs (750 gpm) for the irrigation of 86 acres with an annual volume not to exceed 2 acre-feet of water per acre per year.
3. This Permit is approved subject to the irrigation water use questionnaire being submitted each year.

Dear Mr. Roost:

On October 30, 2007, you were sent applications forms for a permit to appropriate water based on an investigation of Water Permit No. 5990-3, by Lynn Beck, an engineer with this office. Enclosed is a copy of that letter. The investigation showed that your system was not developed as originally permitted. This application is necessary to obtain a permit which will reflect your water use. To date, we have not received a response regarding this application.

Obtaining a water permit that accurately reflects your water use ultimately benefits you by protecting your right to use water. Except for domestic use, any water user without a water right is not entitled to receive protection in the event of interference by a new or future user who has a water right.

Pursuant to South Dakota Codified Laws 46-1-15, 46-5-9, 46-5-10 and 46-2-18, you must have a water permit prior to using water.

If you have any questions, please contact Lynn Beck or me.

Dear Mr. Roost:

Enclosed is a partially completed application form and instruction sheet. You will not have to provide a map as stated in item 2.) on the instruction sheet. I have already prepared one. The enclosed copy is yours to keep or to make any corrections/additions and return with the application.

An inspection of Permit No. 5990-3 found additional water use to what is authorized. Permit No. 5990-3 authorizes 1.22 cubic feet per second (cfs) or 550 gallons per minute (gpm) to irrigate 86 acres. The developed irrigation consists of a center pivot which operates at 2.0 cfs (900 gpm) to irrigate 86 acres of land. The additional water use requires a new application.

This application is for an additional 0.78 cfs (350 gpm) above the 1.22 cfs authorized by Permit No. 5990-3. A \$200.00 fee is required for the application/licensing of the additional 0.78 cfs. If approved, the new permit will be licensed with 5990-3.

If you have any questions, please feel free to contact me at (605)773-3352.

Sincerely,

Lynn Beck

**RECOMMENDATION OF CHIEF ENGINEER FOR WATER PERMIT
APPLICATION NO. 6987-3, JFR-INV-LTD, LLC**

Pursuant to SDCL 46-2A-2, the following is the recommendation of the Chief Engineer, Water Rights Program, Department of Environment and Natural Resources concerning Water Permit Application No. 6987-3, JFR-INV-LTD, LLC, c/o John Roost, PO Box 1877, North Sioux City SD 57049.

The Chief Engineer is recommending APPROVAL of Application No. 6987-3 for an additional 0.45 cfs because 1) there is reasonable probability that there is unappropriated water available for the applicant's proposed use, 2) the proposed diversion can be developed without unlawful impairment of existing rights, 3) the proposed use is a beneficial use and 4) it is in the public interest with the following qualifications:

1. The well approved under this Permit will be located near domestic wells and other wells which may obtain water from the same aquifer. The well owner under this Permit shall control his withdrawals so there is not a reduction of needed water supplies in adequate domestic wells or in adequate wells having prior water rights.
2. Pursuant to SDCL 46-5-6 which allows a greater diversion rate if the method of irrigation, time constraints, or type of soils so require, Permit Nos. 5990-3 and 6986-3, combined authorizes a maximum diversion rate of 1.67 cfs (750 gpm) for the irrigation of 86 acres with an annual volume not to exceed 2 acre-feet of water per acre per year.
3. This Permit is approved subject to the irrigation water use questionnaire being submitted each year.

See report on application for additional information.

Garland Erbele, Chief Engineer
April 23, 2008

REPORT ON WATER PERMIT APPLICATION NO. 6987-3
For JFR-INV-LTD, LLC.
April 9, 2008

Application No. 6987-3 proposes to appropriate 0.78 cfs (350 gpm) and change the location of the irrigated acreage authorized by Water Permit No. 5990-3. Water Permit No. 5990-3 appropriates 1.22 cfs from one well approximately 100 feet deep located in the NE $\frac{1}{4}$ NW $\frac{1}{4}$ of section 26 to irrigate 86 acres located in the NW $\frac{1}{4}$ of section 26; all in T91N R50W in Union County. An investigation of the permit found the system capable of diverting an additional 0.78 cfs from the existing well to irrigate 86 acres located in the S $\frac{1}{2}$ SW $\frac{1}{4}$ of section 23 and the NW $\frac{1}{4}$ NE $\frac{1}{4}$, N $\frac{1}{2}$, NW $\frac{1}{4}$, SE $\frac{1}{4}$ NW $\frac{1}{4}$ of section 26; all in T91N R50W. The applicant is requesting a diversion rate greater than the statutory limit of one cfs per 70 acres. This application if approved combined with Water Permit No. 5990-3 would authorize a total diversion rate of 2.0 cfs for irrigation of 86 acres.

AQUIFER – MISSOURI ELK POINT (M-EP)

The Missouri Elk Point is a surficial outwash (sand and gravel) under water table conditions in the area of this application. The aquifer can be buried and under artesian conditions a few miles to the north and east. The aquifer underlies 180 square miles and contains an estimated 1.5 million acre-feet of water in storage in Union County (Niehus, 1994). The Missouri aquifer as described by Niehus closely mirrors the Missouri Elk Point as described in the Hedges report (Hedges, 1982). The aquifer blends into the Lower Vermillion Missouri aquifer to the northwest, into the Big Sioux South aquifer to the northeast, extends into Clay County to the west and is hydraulically connected to both the Big Sioux and Missouri Rivers. Ground water movement is from northwest to southeast in the area of this application (Niehus, 1994).

The irrigation well completion report indicates fine sand from 1 to 53 feet and sand and gravel from 53 to 100 feet below land surface. The completed well had a static water level of 20 feet below land surface and was capable of producing 800 gpm with nine feet of drawdown. This would result in a specific capacity of about 89 gpm/ft of drawdown. This is a highly prolific well but then so are most of the wells completed into the Missouri Elk Point aquifer. The well is completed in accordance with SD Well Construction Standards.

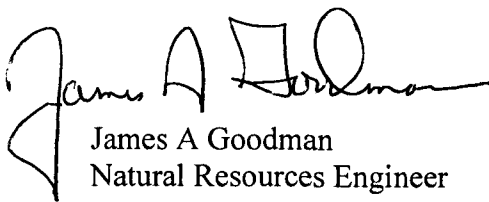

The Water Rights Program does monitor two observation wells within two miles of this site. These are observation well UN-77L which is located about two miles to the northwest, and UN-78A which is located about two miles to the east both from this site. Water levels for these wells show good response to climatic conditions. Water levels decline during dry years and rise during wet years (recharge). Overall the water level record indicates that the aquifer is capable of sustaining additional withdrawals (Water Rights, 2008). One interesting note from the water level data is the fact that water levels near the Missouri River appear to exhibit a slight decline over the period of record. This can be attributed to entrenching of the Missouri River this creating a situation near the river where ground water levels are controlled by the level of the river. Since that head or level of the river is a little lower the ground water discharges to the river and consequently lowers the ground water level. The result over a long time period is the general downward trend in ground water levels near to the river. This trend is not readily apparent at farther distances from the river.

REVIEW OF EXISTING WATER PERMITS/RIGHTS

There are three existing water right Nos. 2357-3, 2358-3, and 1374-3 located within one half mile to the north of this application. This existing irrigation well is located one-half mile from nearest of these existing sites. Interference is not a concern. Drawdown created by pumping is not significant in this area. This is shown by the observation well hydrographs included with this report.

CONCLUSIONS

1. Water is available from the Missouri Elk Point aquifer.
2. The aquifer should be under water table conditions at this site. Drawdown created by pumping is not expected to be significant. The distance between production wells is sufficient to minimize any potential impacts. Interference is not a concern.
3. This existing well appears to have been constructed in accordance with SD Well Construction Standards.
4. This amount of water requested seems large for a system of this size. The 2007 irrigation questionnaire filed for water permit No. 6990-3 indicates a diversion rate of 750 gpm (1.67 cfs). Even this rate is greater than the maximum of 1.23 cfs for 86 acres but would seem reasonable. Unless the applicant can show a reason, this permit should not be granted for more than 0.45 cfs for a total of 1.67 cfs.

Dear Mr. Roost:

Enclosed are Water Permit and License No. 6987-3. These are the final water right documents completing your process of obtaining a Water Right. Also, included with your license is a map prepared by the staff engineer who conducted the investigation.

For your information SDCL 46-6-27 requires that if the owner of an existing well, such as the well authorized by Water Right No. 6987-3, constructs a replacement well and does not plan to use the old well, the old well is considered abandoned and must be plugged. Also, any well that is being used or is not considered abandoned must be valved and controlled, if flowing, or sealed and capped so that no leaking occurs either underground or at the surface.

As long as you use the water beneficially, as stated in the Water License, the State Water Laws provide that you have a continuing right to use the water. If you have any questions, please contact our office.

Sincerely,

Garland Erbele, Chief Engineer
