SOUTH DAKOTA
WATER PERMIT NO. 8132-3

Date of first receipt of application February 25, 2015.

The Water Management Board approved Water Permit No. 8132-3 on May 7, 2026 for Hamilton Family LLC., 37989 191st Street, Hitchcock SD 57348, authorizing the construction of the water use system and the placing of water to beneficial use subject to the following limitations, conditions and qualifications:

1. Water Permit No. 8132-3 appropriates 2.0 cubic feet of water per second from up to two wells to be completed into the Tulare: Western Spink Hitchcock Aquifer (approximately 100 feet deep) located in the approximate center of the SW 1/4 Section 15 for irrigation of 145 acres located in the SW 1/4 Section 15; all in T113N-R65W. This site is located approximately eleven miles southwest of Hitchcock SD.

2. The amount of the appropriation may not exceed 2 acre feet annually for each acre of land to which water is actually and beneficially applied for irrigation. The water is to be used during the following described annual period: April 1 – October 31.

3. The date from which applicant may claim right is February 25, 2015.

4. One-fifth of the construction is to be completed on or before November 7, 2028.

5. All construction is to be completed on or before May 7, 2031.

6. Water is to be put to beneficial use on or before May 7, 2035.

7. Water rights obtained in compliance with the laws of the State of South Dakota may not be unlawfully impaired by this appropriation.

QUALIFICATIONS

1. The wells approved under Water Permit No. 8132-3 are located near domestic wells and other wells which may obtain water from the same aquifer. The well owner, under this Permit must control withdrawals so there is not a reduction of needed water supplies in adequate domestic wells or in adequate wells having prior water rights.

2. The proposed wells authorized by Permit No. 8132-3 must be constructed by a licensed well driller and construction of the well and installation of the pump must comply with Water Management Board Well Construction Rules, Chapter 74:02:04 with the well casing pressure grouted (bottom to top) pursuant to Section 74:02:04:28.

3. This Permit is approved subject to the irrigation water use questionnaire being submitted each year.

Scott Hamilton
37989 191st St
Hitchcock SD 57348

Dear Mr. Hamilton:

Thank you for submitting the five *Applications for a Permit to Appropriate Water* for irrigation from the Tulare Western Spink Hitchcock. In order to complete the applications, the following is required.

- As stated in your phone conversation with Eric Gronlund, please clarify the proposed well depths for each application. The application states the depth to top of water bearing material as 90 feet. What are the proposed well depths?
- The total application fee will be $4,450.00.
- Attached is the application for Hamilton LLC as well as a copy of the Secretary of State corporation certificate which indicates the name on the application should be changed to Hamilton Family LLC and the application will need to be signed by Herbert M Hamilton.

In order to qualify and become part of the random selection process, the well depths, fee, name change and appropriate signature must be returned by March 27, 2015.

If you have any questions, please contact Eric Gronlund or me.

Sincerely,

Karen Schlaak

Water Management Board for Tulare Western Spink Aquifer

NOTICE OF WATER MANAGEMENT BOARD DETERMINATION THAT THE TULARE WESTERN SPINK HITCHCOCK AQUIFER IS FULLY APPROPRIATED AND OF 30 DAY PERIOD TO FILEWATER RIGHT APPLICATIONS

The Water Management Board (Board) has determined that the average annual withdrawal of water from the Tulare Western Spink Hitchcock aquifer is equal to the average estimated annual recharge and deems the aquifer fully appropriated. The aquifer extends west of the James River from southern Spink County into northern Beadle County and into eastern Hand County. A map showing the approximate boundary of the aquifer and a copy of this notice are available at http://denr.sd.gov/ap.

Pursuant to SDCL 46-2A-7.1 and 46-2A-7.2, the Board is providing notice of its determination that the Tulare Western Spink Hitchcock aquifer is fully appropriated and providing notice of a thirty day application period during which the Chief Engineer shall accept and hold for future consideration applications to appropriate water from the aquifer. The thirty day application period begins at noon Central Standard Time (CST) on January 26, 2015 and ends at noon CST on February 25, 2015. Completed applications shall be mailed to the Water Rights Program, 523 East Capitol Ave, Pierre, SD 57501. The date of receipt affixed to any application submitted within the thirty day application period shall be February 25, 2015. The Chief Engineer shall review each application for completeness in accordance with SDCL Chapter 46-2A and Administrative Rules of SD Chapter 74:02:01. The Chief Engineer shall also accept and hold any application submitted after the thirty day application period but such an application shall take the priority date as of the date of receipt of the application. Applications submitted prior to July 1, 2014, shall not be included in this process and must be resubmitted within the thirty day application period to be considered.

Following completion of the thirty day application period, the Board shall create a priority list of all complete applications submitted to the Chief Engineer within the thirty day application period. The priority list created by the Board determines the order of eligibility for any unappropriated water the Board may determine is available at a future date. At least every five years, the Board shall hold a public hearing to review the Tulare Western Spink Hitchcock aquifer, all permits appropriating water from the aquifer and all held applications to determine whether unappropriated water is available from the aquifer. Notice of the aquifer review will be published and provided to all applicants at the address on their application.

If you have any questions or need assistance obtaining or completing an application, please call Eric Gronlund or Ron Duvall at (605) 773-3352. Application forms and instructions are also available online at "http://denr.sd.gov/wr" by selecting the "Available forms" link. Application forms can also be requested by emailing denrinternet@state.sd.us with "Atten. NOTICE OF WATER MANAGEMENT BOARD DETERMINATION THAT THE TULARE WESTERN SPINK HITCHCOCK AQUIFER IS FULLY APPROPRIATED AND OF 30 DAY PERIOD TO FILE WATER RIGHT APPLICATIONS

The Water Management Board (Board) has determined that the average annual withdrawal of water from the Tulare Western Spink Hitchcock aquifer is equal to the average estimated annual recharge and deems the aquifer fully appropriated. The aquifer extends west of the James River from southern Spink County into northern Beadle County and into eastern Hand County. A map showing the approximate boundary of the aquifer and a copy of this notice are available at http://denr.sd.gov/ap.

Pursuant to SDCL 46-2A-7.1 and 46-2A-7.2, the Board is providing notice of its determination that the Tulare Western Spink Hitchcock aquifer is fully appropriated and providing notice of a thirty day application period during which the Chief Engineer shall accept and hold for future consideration applications to appropriate water from the aquifer. The thirty day application period begins at noon Central Standard Time (CST) on January 26, 2015 and ends at noon CST on February 25, 2015. Completed applications shall be mailed to the Water Rights Program, 523 East Capitol Ave, Pierre, SD 57501. The date of receipt affixed to any application submitted within the thirty day application period shall be February 25, 2015. The Chief Engineer shall review each application for completeness in accordance with SDCL Chapter 46-2A and Administrative Rules of SD Chapter 74.02:01. The Chief Engineer shall also accept and hold any application submitted after the thirty day application period but such an application shall take the priority date as of the date of receipt of the application. Applications submitted prior to July 1, 2014, shall not be included in this process and must be resubmitted within the thirty day application period to be considered.

Following completion of the thirty day application period, the Board shall create a priority list of all complete applications submitted to the Chief Engineer within the thirty day application period. The priority list created by the Board determines the order of eligibility for any unappropriated water the Board may determine is available at a future date. At least every five years, the Board shall hold a public hearing to review the Tulare Western Spink Hitchcock aquifer, all permits appropriating water from the aquifer and all held applications to determine whether unappropriated water is available from the aquifer. Notice of the aquifer review will be published and provided to all applicants at the address on their application.

If you have any questions or need assistance obtaining or completing an application, please call Eric Gronlund or Ron Duvall at (605) 773-3352. Application forms and instructions are also available online at "http://denr.sd.gov/wr" by selecting the "Available forms" link. Application forms can also be requested by emailing denrinternet@state.sd.us with "Atten: Water Rights Program" in the subject line, or by writing us at SD Water Rights Program, 523 E Capitol Ave, Pierre SD 57501. FROM: Jeanne Goodman, Chief Engineer
Water Rights Program

SUBJECT: Conduct Random Selection to Create a Priority List for Applications within the Tulare Western Spink Hitchcock Aquifer

The Water Management Board published notice in mid-January that the Tulare Western Spink Hitchcock Aquifer is fully appropriated and provided a 30 day period to file water right applications. The 30 day application period expired at noon on February 25, 2015, with the Department of Environment and Natural Resources receiving 28 applications. Your applications are eligible for inclusion in a random selection process to be conducted by the Water Management Board to create the priority list. The priority list created by the Board determines the order of eligibility for any unappropriated water the Board may determine is available at a future date. You have two applications (Scott Hamilton) and one application (Hamilton Family LLC) eligible for the random selection process.

At the Board's March 6th meeting, a random selection process was chosen by the Board that entails drawing index cards to create the priority list. An index card will be prepared for each application with the application number and applicant's name being placed on the index card. The order in which each index card is randomly drawn from a container will determine the priority list.

The Water Management Board will conduct the random selection to create the priority list at 8:30 AM (Central Time) on Wednesday, May 6, 2015, at the Floyd Matthew Training Center, Joe Foss Building, 523 E. Capitol Avenue, Pierre SD. Applicants are welcome to attend but you do not need to be present to have your application(s) included in the random selection drawing. After the priority list is determined by the Board, each applicant will be provided a copy of the priority list.

Please contact Eric Gronlund at (605) 773-3352 if you have questions regarding the random selection process.

Notice of Entry of Order

May 19, 2015

TO: Scott Hamilton
37989 191st St
Hitchcock SD 57348

FROM: Jeanne Goodman, Chief Engineer, SD DENR Water Rights Program

SUBJECT: Priority List for Tulare Western Spink Hitchcock Aquifer

On May 7, 2015, the Water Management Board (board) held a hearing to create a priority list of applications to appropriate water from the Tulare Western Spink Hitchcock aquifer should water become available at a future date. Please note creation of this priority ranking list by the board does NOT mean your application has been approved. You cannot begin development of your irrigation system until such time there is water available, and the board approves your application. Enclosed is the list of applications with the applicant's name and the priority ranking number assigned by the board.

The random selection process used by the board to assign a ranking number consisted of drawing index cards (one index card per application) from a container. If the board determines water is available from the aquifer at some future date, the water will first be made available to the applicant with a priority ranking of "1" on the enclosed list. If there is still water available after satisfying the number "1" ranking, water will be made available to ranking "2" and so on until all of the available water is made available for appropriation. However, the aquifer is currently fully appropriated, and no new applications are being approved. A review of water availability from the aquifer will be conducted by the board at least once every five years.

Creation of the priority list for this aquifer was a one-time event by the board, and the ranking order may not be altered. Any applications submitted in the future will be junior to all of the applications on the enclosed priority list. As an applicant included in this priority list, you may leave your application on the list or you may withdraw the application at any time and get a refund of your application fee. If the application is withdrawn it cannot be added back in at a later date and retain the original ranking established by the board; it will be junior to all other applications. If the acreage described on your application comes under new ownership, a transfer of ownership needs to be filed by the new owner. Also, the application may not be transferred from the acreage described on the application to other acreage. No later than five years from now the board will review water availability from the aquifer to see whether any additional permits can be approved. Notice of the five year review will be mailed to the address provided on your application unless we are notified of a change in your address.

If you have any questions, please contact either Eric Gronlund or Ron Duvall at (605) 773-3352.

IN THE MATTER OF)
TULARE: WESTERN)
SPINK/HITCHCOCK AQUIFER)

PRIORITY LIST

The Water Management Board, having determined the Tulare: Western Spink/Hitchcock aquifer was fully appropriated, publicly noticed its determination and provided a thirty day period for the submission of applications for the appropriation of water from this aquifer as required by SDCL § 46-2A-7.1. Twenty-eight applications for the appropriation of water from this aquifer were received. On May 7, 2015, the Water Management Board held a hearing and created a priority list for future unappropriated water from this aquifer using a random selection process pursuant to SDCL § 46-2A-7.4. The following is the resulting priority list:

Appl. No.	**Applicant** TULARE WESTERN SPINK/HITCHCOCK AQUIFER	**Priority Ranking**
8128-3	Riverside Hutterian Brethren Inc	1
8101-3	Bixler Farms	2

Notice of Hearing Regarding Five-Year Review to Determine the Availability of Unappropriated Water in the Tulare Western Spink Hitchcock Aquifer

The Water Management Board (Board) previously determined that the average annual withdrawal of water from the Tulare Western Spink Hitchcock aquifer is equal to the average estimated annual recharge and deemed the aquifer fully appropriated. A map showing the approximate boundary of the aquifer; a copy of a public notice; and a report prepared for the Board to review will be available for public viewing on September 17, 2020, at https://denr.sd.gov/ap.

Pursuant to statute, the Board held a hearing for the purpose of accepting applications for potential future appropriations from the aquifer and a creation of a priority list. That hearing was held on May 7, 2015. Twenty-eight applications were prioritized by the Board and are being held for possible future action.

Pursuant to SDCL 46-2A-7.5, the Board is required to hold a public hearing reviewing the groundwater source, all permits appropriating water from that source, and all held applications at least once every five years to determine whether unappropriated water has become available for use. The five-year review is scheduled for 10:30 AM (Central Time), on Wednesday, October 7, 2020, at the Floyd Matthew Training Center, Joe Foss Building, 523 E. Capitol Avenue, Pierre SD. The Board is authorized to 1) determine that additional water is available for appropriation, 2) determine that no additional water is available for appropriation, or 3) defer action for further study. The hearing time is an estimate and may be delayed due to prior items on the agenda. Pursuant to SDCL 46-2-9, 46-2-11, and 46-2A-7.5, the Board has legal authority and jurisdiction to conduct this hearing.

Notice is given to individuals with disabilities that this hearing is being held in a physically accessible place. Please notify the Department of Environment and Natural Resources at least 48 hours before the hearing if you have a disability for which special arrangements must be made at the hearing. The telephone number for making arrangements is (605) 773-3352.

Questions regarding the hearing may be directed to Ron Duvall, Water Rights Program at (605) 773-3352 or ron.duvall@state.sd.us.

Tulare Western Spink Hitchcock Aquifer report to be reviewed

Notice of Hearing Regarding Five-Year Review to Determine the Availability of Unappropriated Water in the Tulare Western Spink Hitchcock Aquifer

The Water Management Board (Board) previously determined that the average annual withdrawal of water from the Tulare Western Spink Hitchcock aquifer is equal to the average estimated annual recharge and deemed the aquifer fully appropriated. A map showing the approximate boundary of the aquifer; a copy of a public notice; and a report prepared for the Board to review will be available for public viewing on September 17, 2020, at https://denr.sd.gov/ap.

Pursuant to statute, the Board held a hearing for the purpose of accepting applications for potential future appropriations from the aquifer and a creation of a priority list. That hearing was held on May 7, 2015. Twenty-eight applications were prioritized by the Board and are being held for possible future action.

Pursuant to SDCL 46-2A-7.5, the Board is required to hold a public hearing reviewing the groundwater source, all permits appropriating water from that source, and all held applications at least once every five years to determine whether unappropriated water has become available for use. The five-year review is scheduled for 10:30 AM (Central Time), on Wednesday, October 7, 2020, at the Floyd Matthew Training Center, Joe Foss Building, 523 E. Capitol Avenue, Pierre SD. The Board is authorized to 1) determine that additional water is available for appropriation, 2) determine that no additional water is available for appropriation, or 3) defer action for further study. The hearing time is an estimate and may be delayed due to prior items on the agenda. Pursuant to SDCL 46-2-9, 46-2-11, and 46-2A-7.5, the Board has legal authority and jurisdiction to conduct this hearing.

Notice is given to individuals with disabilities that this hearing is being held in a physically accessible place. Please notify the Department of Environment and Natural Resources at least 48 hours before the hearing if you have a disability for which special arrangements must be made at the hearing. The telephone number for making arrangements is (605) 773-3352.

Questions regarding the hearing may be directed to Ron Duvall, Water Rights Program at (605) 773-3352 or ron.duvall@state.sd.us. Published Sept. 5, 2020 at approximate cost of $24.67

First Report on the Five Year Review of Water Availability
Western Spink Hitchcock Management Unit of the Tulare Aquifer
September 17, 2020

The Water Management Board deemed the Western Spink Hitchcock management unit of the Tulare aquifer as fully appropriated in 2013. In 2014, the South Dakota Legislature provided a process for administering fully appropriated aquifers by placing into law SDCL 46-2A-7 through 46-2A-7.7. These laws provide a process to 1.) notice a determination that a groundwater source is fully appropriated; 2.) accept and hold applications for future consideration; 3.) create a priority list for future appropriations if unappropriated water becomes available; and 4.) conduct a review at least once every five years to determine whether unappropriated water is available. At the time of this report, there are 28 applications to appropriate water on hold for this aquifer management unit and they total 72.79 cubic feet per second (cfs) for the irrigation of 5,374 acres. This report is an assessment of the availability of unappropriated water in the Western Spink Hitchcock management unit of the Tulare aquifer to satisfy the five-year review requirements for fully appropriated aquifers.

AQUIFER: Western Spink Hitchcock management unit of the Tulare aquifer (T:WSH)

HYDROGEOLOGY

The Tulare aquifer is a Quaternary aged system of interconnected sand and gravel layers that were deposited as outwash by meltwater from receding glaciers (Howells and Stephens, 1968). The Western Spink Hitchcock management unit of the Tulare aquifer is a buried aquifer generally lying immediately above the bedrock (basal) (Hedges et al., 1982). The glacial deposits that created the Tulare aquifer were deposited on top of an existing erosional surface that had exposed the Cretaceous aged Pierre Shale, Niobrara Formation, and in the buried deeply incised bedrock valleys, the Codell Sandstone member of the Carlisle Shale (Howells and Stephens, 1968). The areal extent of the Western Spink Hitchcock management unit has undergone several revisions and they are described in detail by Buhler (Buhler, 2012a). The current areal extent has been delineated as covering an area of 263,016 acres (Buhler, 2012a). Buhler (2013) later notes that this areal extent may have been optimistic. This review did not investigate revising the boundaries of the Tulare: Western Spink Hitchcock management unit, however, there have been over 100 additional test holes or wells drilled within the boundaries of the management unit since 2012 (Water Rights, 2020d).

Buhler's (2013) analysis determined that approximately 76,978 acres of the Tulare: Western Spink Hitchcock aquifer were under unconfined conditions in October 2012, and showed that at that time, the majority of the Tulare: Western Spink Hitchcock aquifer was under confined conditions. The static water level in the Tulare: Western Spink Hitchcock aquifer has ranged from 63 feet below ground surface to rising above ground surface (Water Rights, 2020b). The direction of groundwater flow in the Tulare: Western Spink Hitchcock management unit is generally from the west to the east, towards the James River.

South Dakota Codified Law 46-2A-9

Pursuant to SDCL 46-2A-9, a permit to appropriate water may be issued only if there is a reasonable probability that there is unappropriated water available for the applicant's proposed

use, that the proposed diversion can be developed without unlawful impairment of existing rights and that the proposed use is a beneficial use and in the public interest.

WATER AVAILABILITY

The probability of unappropriated water available from an aquifer can be evaluated by considering SDCL 46-6-3.1, which requires "No application to appropriate groundwater may be approved if, according to the best information reasonably available, it is probable that the quantity of water withdrawn annually from a groundwater source will exceed the quantity of the average estimated annual recharge of water to the groundwater source."

The availability of unappropriated water from the Tulare: Western Spink Hitchcock aquifer was last evaluated in 2013 and was based upon observation well data and through consideration of a hydrologic budget for the aquifer (Buhler, 2013). This report will reevaluate the availability of unappropriated water from the Tulare: Western Spink Hitchcock aquifer based upon additional years of observation well data and the development of a hydrologic budget for the aquifer.

Observation Well Data

In determining the availability of unappropriated water, South Dakota Administrative Rule 74:02:05:07 requires the Water Management Board to rely on the record of observation well measurements in addition to other data, to determine that the quantity of water withdrawn annually from the aquifer does not exceed the estimated average annual recharge to the aquifer. The analysis of observation well data provides a means of assessing the aquifer and provides the best reasonably available information to evaluate the balance between withdrawals from and recharge to the Tulare: Western Spink Hitchcock aquifer.

The Water Rights Program monitors 50 observation wells completed in the Tulare: Western Spink Hitchcock aquifer (Water Rights, 2020b). Hydrographs for five of these observation wells are shown in Figures 2-6 and hydrographs for all 50 are included in Appendix B. The five selected hydrographs are representative of the Tulare: Western Spink Hitchcock aquifer and show that the aquifer readily responds to climatic conditions, with rising water levels during wet years and declining water levels during dry years.

The response of the aquifer as recorded by the observation well measurements can provide insight into the balance of withdrawals to recharge for an aquifer. If discharge (natural and from well withdrawals) from an aquifer is exceeding the recharge to an aquifer, a steady, continual decline of the water level or artesian pressure is expected. In observation wells that show the influence of well withdrawals, a seasonal decline should be observed followed by a return to the pre-pumping water level. If the withdrawals across the entirety of the aquifer are unevenly distributed, the configuration of the potentiometric surface may change to show the effect of these withdrawals. The effects of climate can mask some of these signals for how the aquifer responds to pumping.

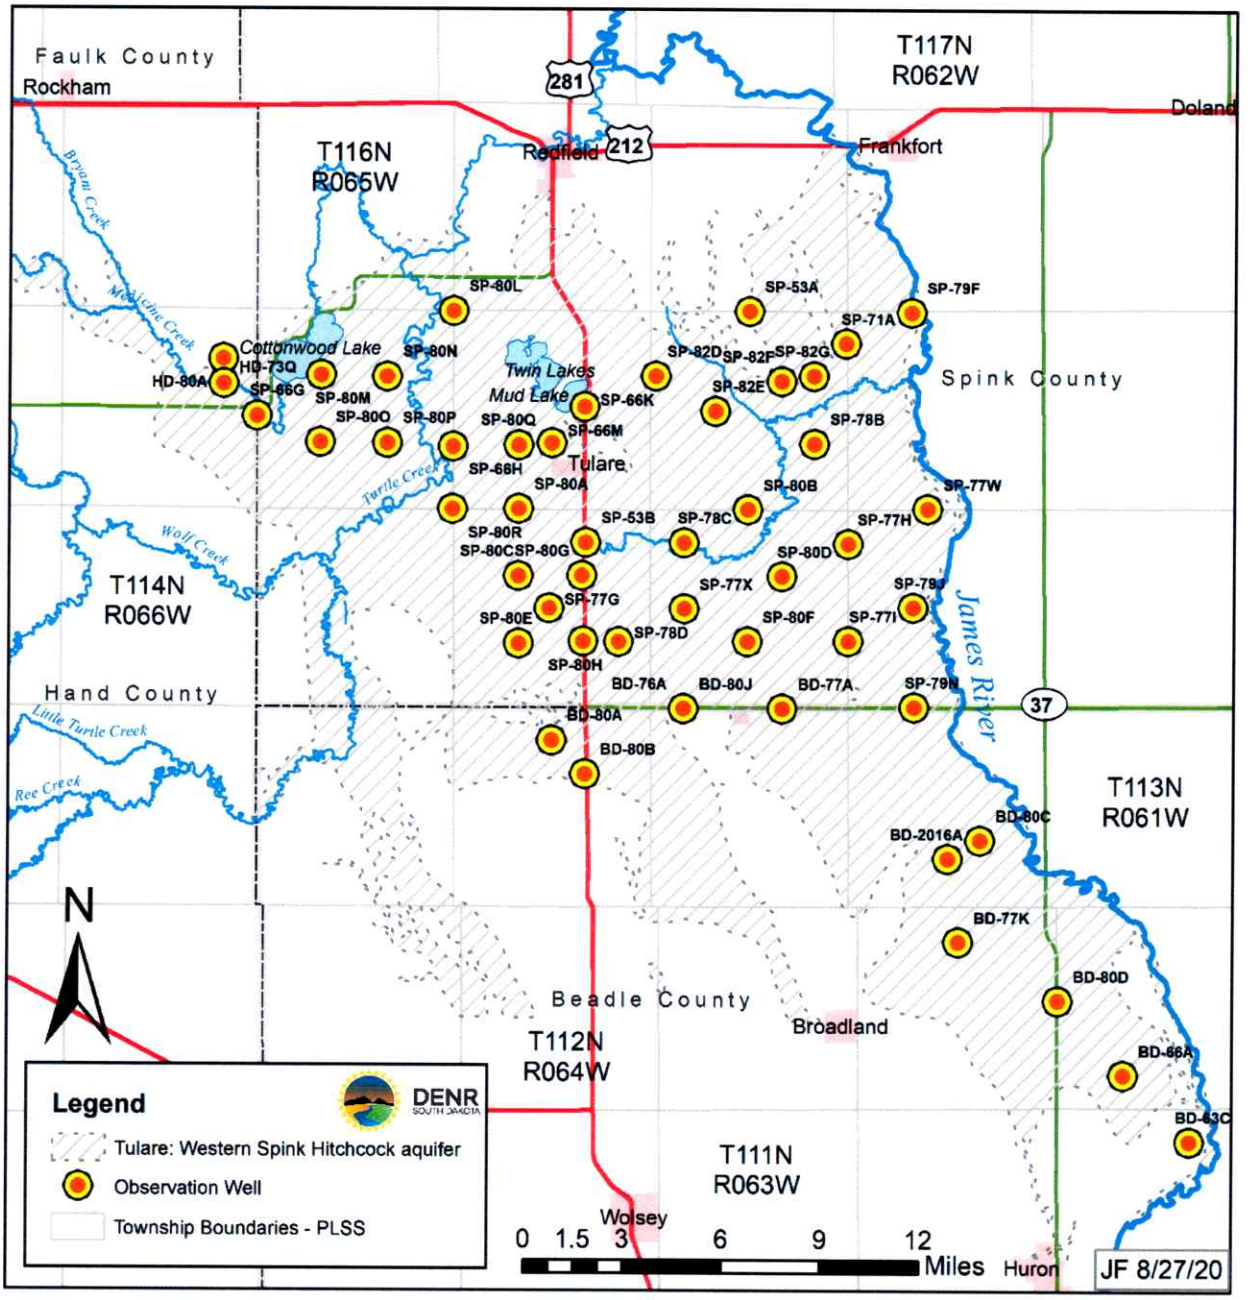

Figure 1. Map of the Western Spink Hitchcock management unit of the Tulare Aquifer showing the location of observation wells in the Tulare: Western Spink Hitchcock aquifer (Modified from Buhler, 2012a; Water Rights, 2020b)

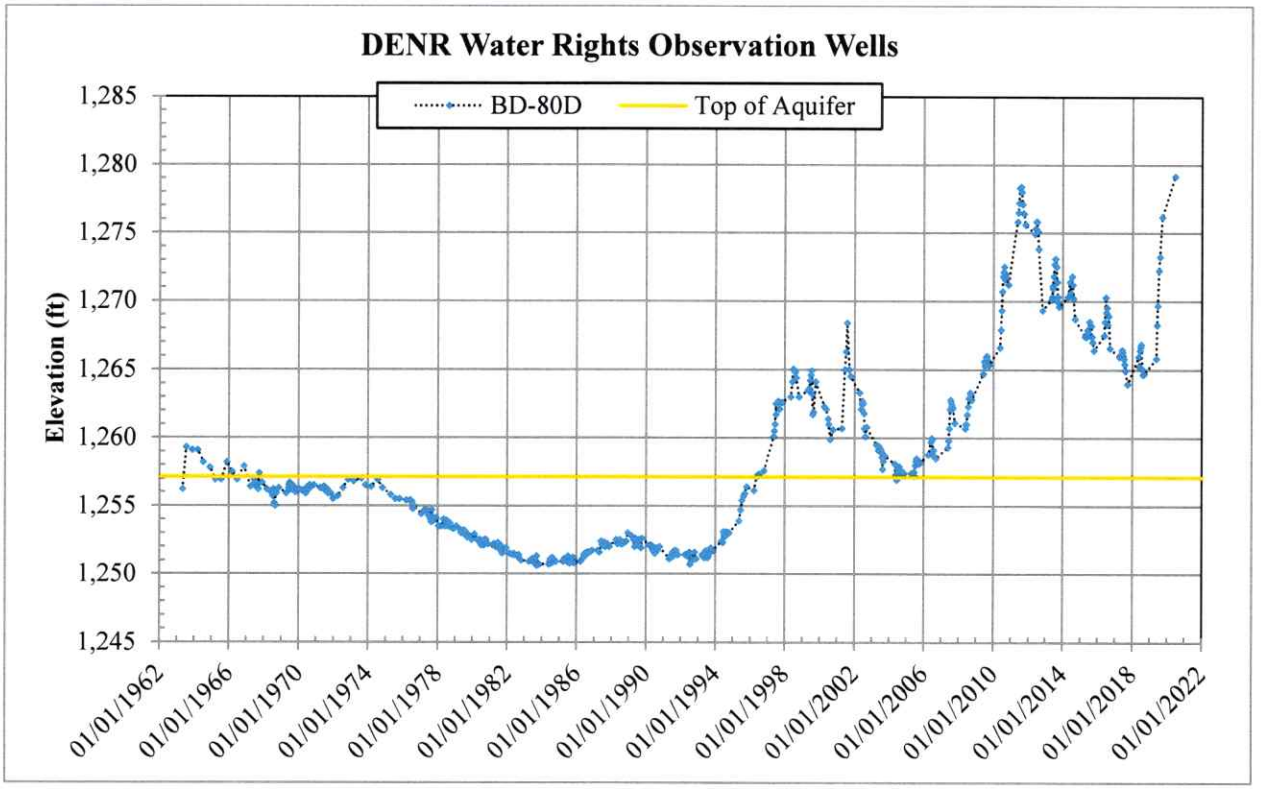

Figure 2. Hydrograph of DENR-Water Rights' observation well BD-80D (see Figure 1 for location). Ground surface elevation is approximately 1292 ft.

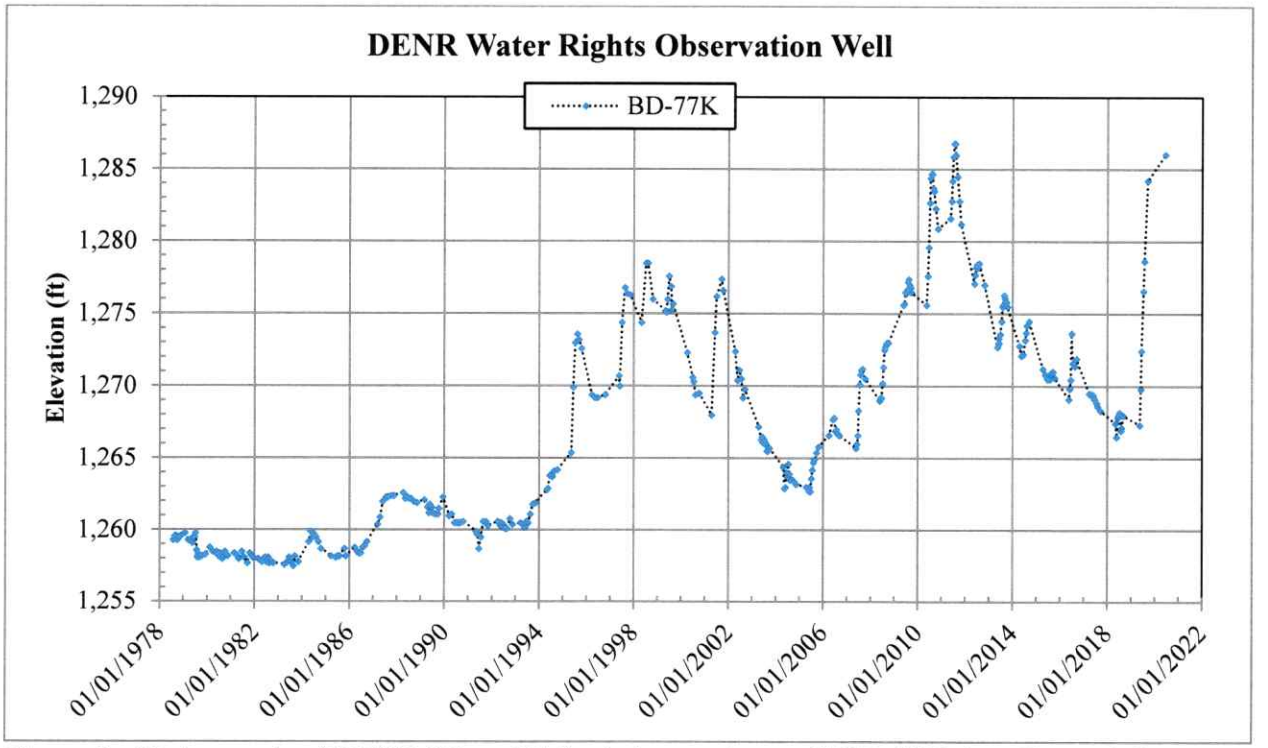

Figure 3. Hydrograph of DENR-Water Rights' observation well BD-77K (see Figure 1 for location). Top of aquifer elevation is approximately 1239 ft, ground surface elevation is approximately 1313 ft.

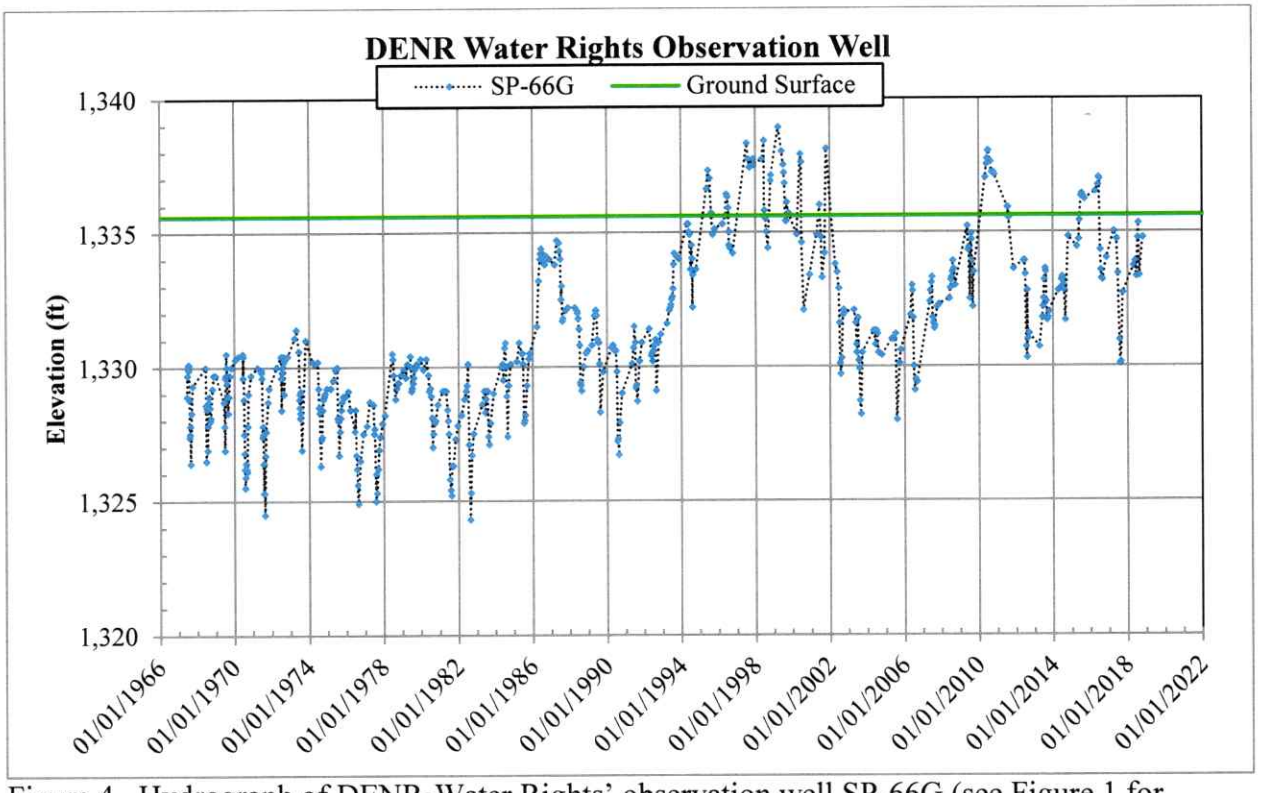

Figure 4. Hydrograph of DENR-Water Rights' observation well SP-66G (see Figure 1 for location). Top of aquifer elevation is approximately 1264 ft.

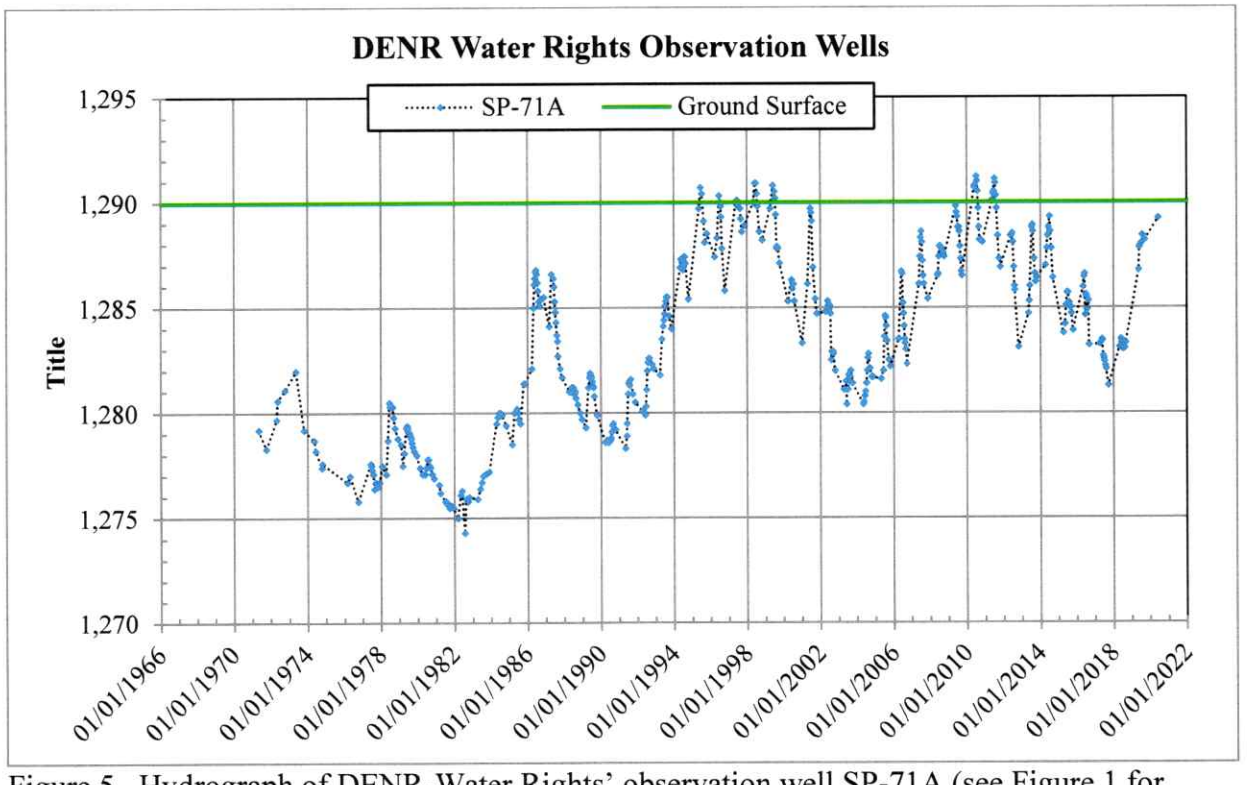

Figure 5. Hydrograph of DENR-Water Rights' observation well SP-71A (see Figure 1 for location). Top of aquifer elevation is approximately 1245 ft.

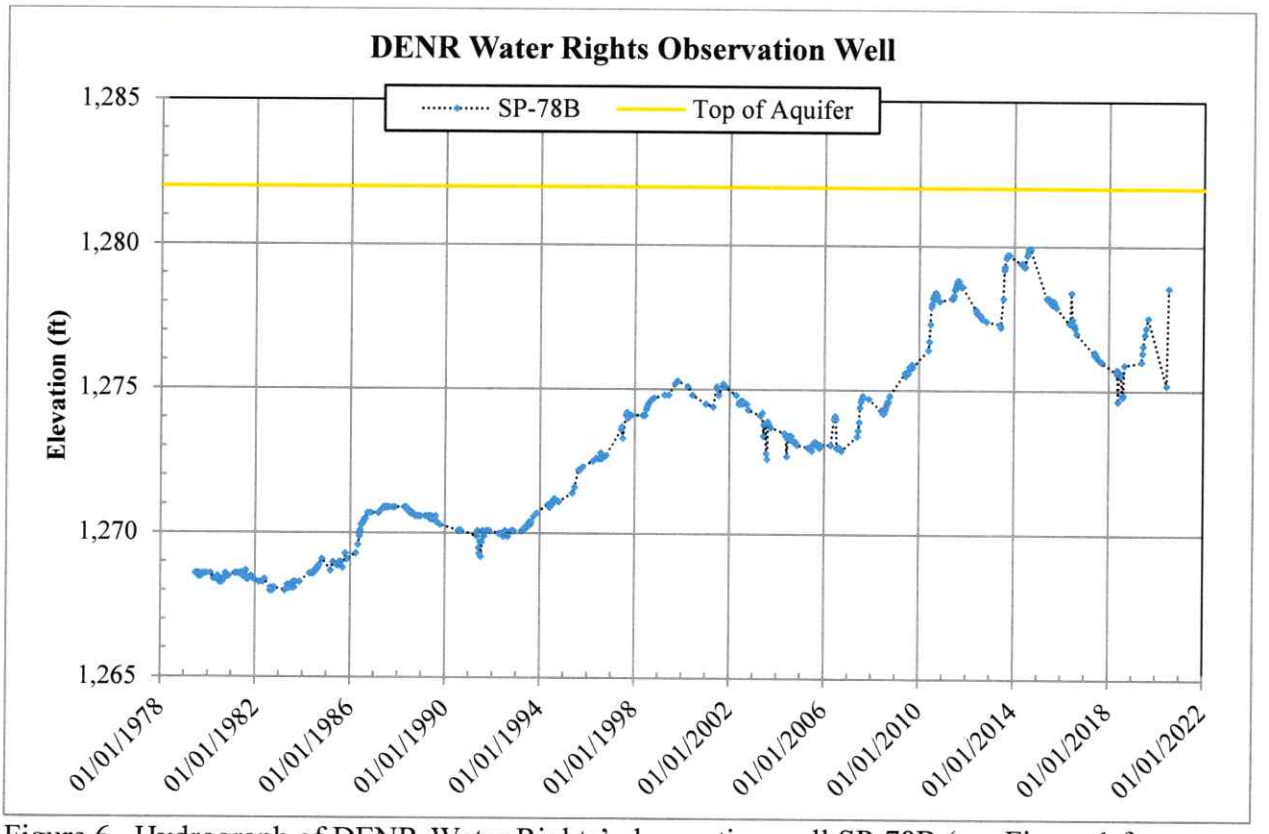

Figure 6. Hydrograph of DENR-Water Rights' observation well SP-78B (see Figure 1 for location). Ground surface elevation is approximately 1296 ft.

Observation well water level trends:
When the discharge (natural and from well withdrawals) exceeds the recharge of an aquifer, a declining water level is an indicator. Conversely, a rising water level in an aquifer is an indicator that the recharge is exceeding the discharge (natural and well withdrawals) of an aquifer. An equation for this relationship is:

$$\Delta S = R - D$$

Where: ΔS = change in the volume of water in storage in the aquifer
R= Recharge
D= Discharge

The observation well data for the Tulare: Western Spink Hitchcock aquifer has documented upward trending water levels throughout the aquifer (Water Rights, 2020b). The average slope of linear trend lines for the 48 observation well hydrographs from the initial measurement in 1983 up to the last measurement of 2019 has been +0.000571 feet per day (+0.209 feet per year). Observation well BD-80B was removed from this analysis due to the well having several periods of missing data and observation well BD-2016A was removed due to having a short period of record. Buhler's analysis (2013) refined the period of analysis to encompass January 2003 through October 2012 due to no additional appropriations being made over this time period. This time period did not account for the time it took for the appropriations approved in 2002 to place water to beneficial use. All permitted and licensed water rights had placed water to beneficial use starting with the 2008 irrigation season. Analysis of the observation wells over the January 2003 through October 2012 period found the average slope of the linear trend line for

the 48 observation well hydrographs to be +0.003607 feet per day (+1.317 feet per year). Including the time prior to Buhler's analysis, 1983 through October 2012, the average slope of the linear trend line for the 48 observation well hydrographs was found to be +0.000751 feet per day (+0.274 feet per year). In the time since Buhler's analysis up to the end of 2019 (November 2012 through 2019), the average slope of the linear trend line for the 48 observation well hydrographs has been -0.001187 feet per day (-0.433 feet per year). This type of analysis does not account for any errors introduced by including data from observation wells that are influenced by well withdrawals and the year to year variability of those withdrawals or an observation well changing between unconfined and confined behaviors. Observation wells that are under unconfined conditions show the change in storage within the aquifer, while observation wells that are under confined conditions show the change in hydrostatic pressure.

Over the period of record, the upward trend of the water levels indicates recharge to the Tulare: Western Spink Hitchcock aquifer has been greater than the total of the discharges from the aquifer. However, given the decrease in the average slope of the linear trend line since Buhler's analysis (November 2012-end of 2019), consideration of appropriations that have started placing water to beneficial use since November 2012, and the decrease in the long term average slope from the period of 1983 through October 2012 (+0.274 feet per year) to the period of 1983 through 2019 (+0.209 feet per year), the observation well water level trend is indicating that discharge may have exceeded the recharge of the aquifer over the November 2012 through 2019 time period.

Quantifying the change in volume of water stored in the Tulare: Western Spink Hitchcock aquifer is possible through analysis of observation wells that have remained unconfined throughout their period of record. The response of the aquifer when an observation well is under confined conditions is only reflective of the head pressure at that location and does not directly show changes in the volume of water in the aquifer. The hydrograph for observation well BD-80D as shown in Figure 2, visually shows how the observed water level changes between unconfined and confined conditions. The aquifer at observation well BD-80D was under unconfined conditions between 1966 and 1996, and then transitioned to confined conditions when the water level started rising above the top of the aquifer in 1997.

Continuing the methodology used by Buhler (2013), the same five observation wells were used to analyze the Tulare: Western Spink Hitchcock aquifer. These wells were chosen by Buhler because they are located in portions of the aquifer that remained unconfined for their entire period of record and the wells were determined to accurately reflect aquifer conditions. The time period used for this updated analysis was 1983-2019 to allow each observation well to have the same number of water years on record. The water year runs from October 1st through September 30th and the values used in this analysis are interpolated values for October 1st that were obtained using the two adjacent readings on the observation well hydrograph, unless a reading was recorded on October 1st. For example, the 1983 water year water level change is the interpolated Oct. 1, 1983 reading minus the interpolated Oct. 1, 1982 reading. The results of the analysis are shown in Table 1.

Buhler (2012a) analyzed the average annual water level change from 1983-2011. Buhler's (2012a) analysis showed an increase in average annual water level of 0.34 feet per year. However, Buhler's 2012 analysis and his subsequent 2013 analysis omitted the last month for

water year 2011 by only factoring in observation well readings from October 2010 through August 2011. The following water year, water year 2012, was calculated correctly from October 1, 2011 to October 1, 2012. The consequence of omitting September 2011 in these calculations is that there are unaccounted for drops in the observation well hydrographs of 3.5 feet for SP-79F, 0.2 ft for SP-78B, 1.2 ft for SP-80B, 1.1 ft for SP-82E, and 1.2 ft for SP-82G. Including September 2011 in the calculations for the annual water level change for 2011 reduces the average annual water level change in Buhler's 2012 analysis from 0.34 feet per year to 0.30 feet per year and for Buhler's 2013 analysis from 0.3152 feet per year to 0.21 feet per year. Buhler's 2013 analysis determined that by using the 0.3152 feet per year of average annual water level change over an unconfined area of 76,978 acres, the recharge exceeded the discharge by an average of 3,640 acre-feet per year. The availability of 3,640 acre-feet per year of unappropriated water applied at an application rate of 9.32 inches would allow the irrigation of 4,686 acres (Buhler, 2013). The Water Management Board approved permits authorizing the irrigation of 4,706 acres. If water year 2011 had included the observation well readings of September 2011, the amount of unappropriated water available would have been reduced by 1,215 acre-feet per year, to 2,425 acre-feet per year. This volume of unappropriated water would have only allowed the irrigation of an additional 3,122 acres, a reduction of 1,564 acres from Buhler's analysis (Buhler, 2013).

In the time since Buhler's report (2013), the average annual water level change has been an increase of 0.47 feet per year (2013-2019), resulting in the long-term average annual water level change being raised from +0.22 feet per year (1983-2012) to + 0.27 feet per year from 1983 to 2019. Given the short period of time since the last appropriations were approved in 2013, anomalously wet or dry years can skew the analysis of short time periods. One such anomalous year is the wet year of 2019, as evidenced in Table 2 by having the smallest amount of reported irrigation, the fewest irrigated acres, and the lowest application rate over the period of record. Excluding the anomalously wet year of 2019, the period of 2013-2018 saw a decrease of 0.02 feet per year, and the long-term period of 1983-2018 saw the average annual water level change lowered to +0.18 feet per year.

This method of estimating a volume of water is approximate as the unconfined area of the aquifer is not static and changes as the elevation of the water changes. This method also assumes that all variables relating to the use of the water are static and does not take into consideration any recent changes that would affect the use of water going into the future. Over the period of record, the observation well data indicates that the average annual recharge to the aquifer has exceeded the average annual discharge from the aquifer. This increase in annual water level change prior to Buhler's report was accounted for in Buhler's report (2013) and appropriations resulting from the report. In the time since Buhler's report and excluding the anomalously wet year of 2019 (2013-2018), the observation well data indicates that the average annual recharge to the aquifer has been nearly adequate to supply the average annual discharge from the aquifer with an average decline of 0.02 feet per year. This small decline, coupled with the time it took for approved appropriations to place their water to beneficial use (Table 5), suggests that additional data from future years is needed to determine if the appropriations made in 2013 from the Tulare: Western Spink Hitchcock aquifer brought the aquifer up to being fully appropriated. Based upon the existing data, the observation well analysis does not show that unappropriated water is available from the Tulare: Western Spink Hitchcock aquifer.

Potentiometric Surface:

The potentiometric surface of an aquifer is a snapshot of the water level in the aquifer at a selected time. The potentiometric surface will show higher water levels as a result of wetter periods of time and lower water levels during drier times and/or increased periods of withdrawals. An analysis of the potentiometric surface does not provide a clear indication of whether there is unappropriated water available or how much may be available. The potentiometric surface data can show whether there are significant stressors on the aquifer, in other words, if the recharge is able to keep up with the withdrawals from the aquifer. These stressors would show up as a significant change in the general shape/configuration of the potentiometric surface. If there are areas of the aquifer that are showing signs of stress, it is an indicator that the aquifer is over-appropriated. The stressors may be caused by very significant increases in withdrawals in an area over a short period of time, or may be more subtle, such as a slight increase in the withdrawals that cumulatively over the course of 10, 15, 20 years exceed the recharge to the local area. The potentiometric surface of the aquifer would be able to show these stressors because the area that is being stressed is creating a steeper hill for the groundwater to flow down.

The potentiometric surface of the Tulare: Western Spink Hitchcock aquifer was estimated from observation well data for three time periods (Magstadt, 2020). These time periods are May 1988, May 2013, and June 2020. These dates were chosen for comparison of the configuration of the potentiometric surface with the potentiometric surfaces calculated by Buhler (2013). Maps showing the contour lines for these potentiometric surfaces are shown in Figures 6-8.

The potentiometric surface contours shown in Figure 6 show that water levels were generally lower in May 1988 than they were in May 2013. The potentiometric surface contours also show that the water levels were similar in May 2013 and June 2020. The potentiometric surface contour lines generally follow the same shapes for all three dates, indicating that the configuration of the potentiometric surface has not changed significantly over time. The configuration of the potentiometric surface of the aquifer over time is showing that the well withdrawals have not been affecting the general direction of groundwater flow, indicating that the aquifer has not been significantly stressed by withdrawals. The pre-development configuration of the potentiometric surface is unknown.

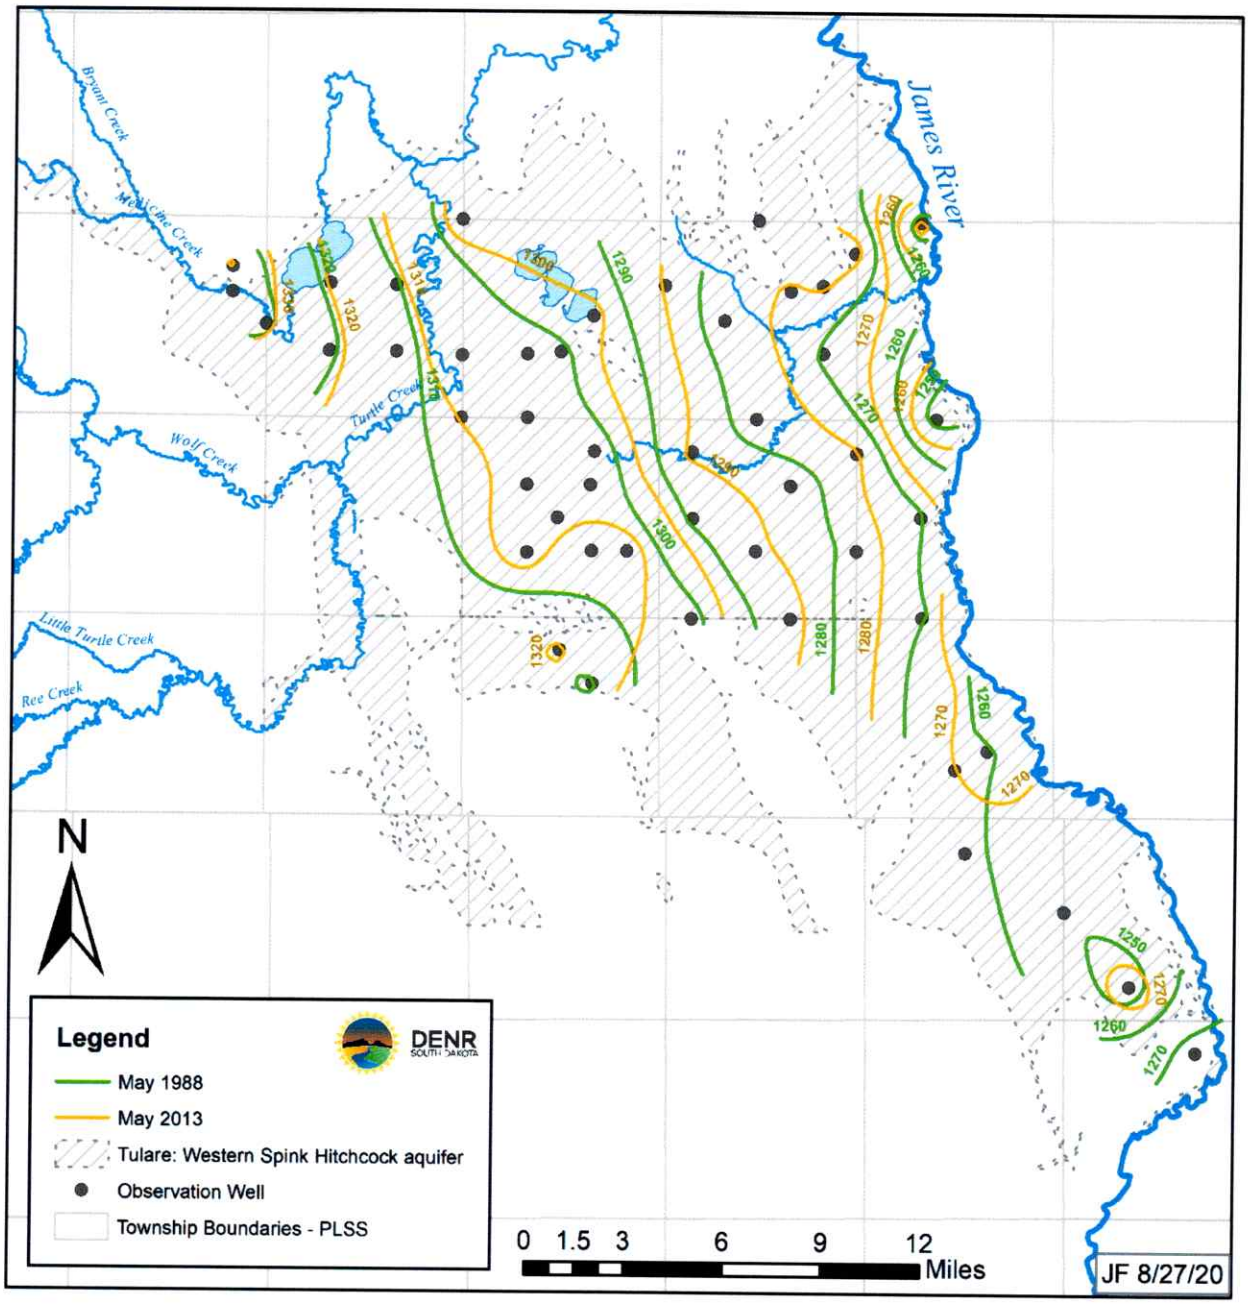

Figure 6. Potentiometric surface contours of the Tulare: Western Spink Hitchcock aquifer for May 1988 (Green) and May 2013 (Yellow)

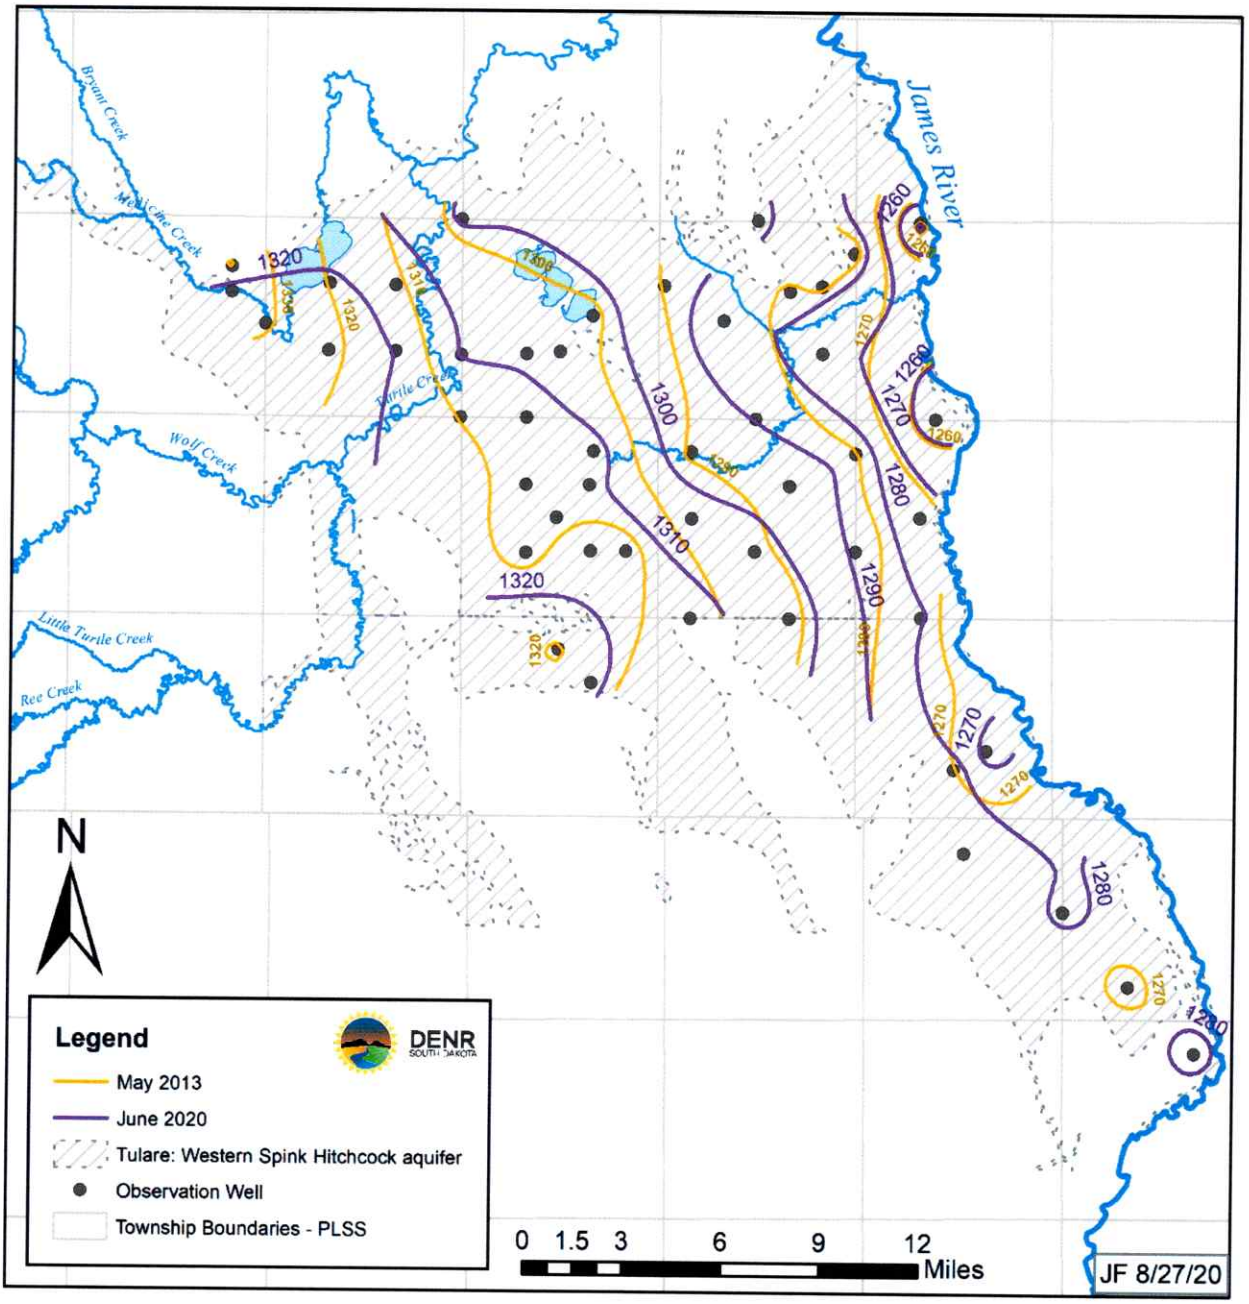

Figure 7. Potentiometric surface contours of the Tulare: Western Spink Hitchcock aquifer for May 2013 (Yellow) and June 2020 (Purple)

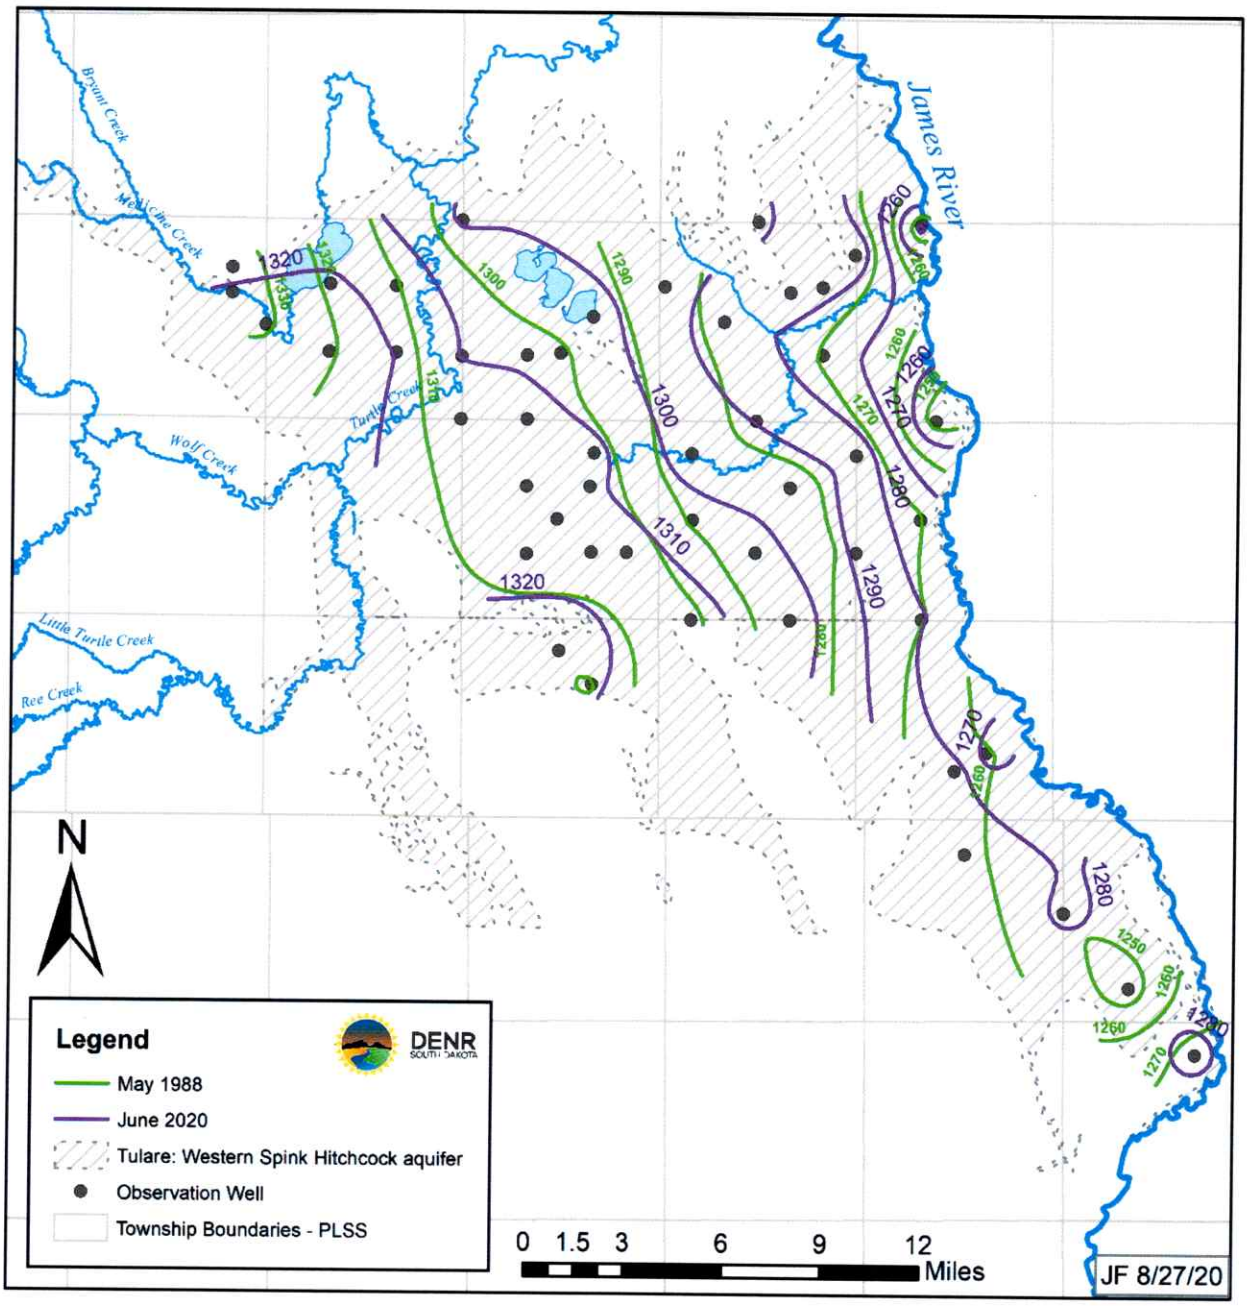

Figure 8. Potentiometric surface contours of the Tulare: Western Spink Hitchcock aquifer for May 1988 (Green) and June 2020 (Purple)

The observation well analysis provides a quantitative analysis based upon measured observations of the aquifer for the determination of the availability of unappropriated water. The annual water level change for the period of 2012-2018 shows that the water level has declined 0.02 feet per year on average. The increase in the annual water level change over the period of 1983-2011 was already accounted for in appropriations made in 2011 and 2012. The observation well analysis does not show that unappropriated water is available from the Tulare: Western Spink Hitchcock aquifer

Hydrologic Budget

Recharge

Recharge to the Tulare: Western Spink Hitchcock aquifer occurs primarily through infiltration of precipitation where the aquifer is at or near the surface. Recharge from precipitation varies by season, by year, and by location (Hamilton and Howells, 1996). Recharge could also occur from rivers and streams if they are hydraulically connected to the aquifer and if the potentiometric surface of the aquifer was lower than the stage of streams and rivers.

Recharge Estimates:

Previous Estimates:

Recharge to the Tulare: Western Spink Hitchcock has been estimated through a variety of methods. Prior to 2002 the Western Spink and Hitchcock management units were considered separately, and the recharge studies may account for one or both management units. Hedges et al. (1985) used data from 17 observation wells to determine the recharge rate to the unconfined portion of the Tulare: Hitchcock is 2.0 inches per year. A regional flow-net analysis of the Tulare: Hitchcock aquifer was also performed by Hedges et al. (1985) and found the estimated recharge rate to the aquifer was 0.24 inches per year. It is unknown what the confined and unconfined areas were for these analyses.

A numerical groundwater flow model (Kuiper, 1984) estimated that the average recharge rate to the Tulare: Western Spink Hitchcock is 0.83 inches per year. Applying the estimated average recharge rate of 0.83 inches across the 527 square miles (337,280 acres) of the model, results in an estimated average annual recharge rate of 23,000 acre-feet per year (Kuiper, 1984). This model used cells that measured 1 mile by 1 mile and compared the response of the aquifer in the model to observation well data from 1968 to 1978 and irrigation questionnaire data from 1978. Estimated recharge in the model was varied throughout the model domain, including 37 square miles around Twin and Mud lakes where the recharge to the aquifer was estimated as being higher than the rest of the model. The model domain did include Beadle, Hand, and Spink Counties and 13 square miles along the James River were included in both model areas A (Tulare: Western Spink Hitchcock) and B (Tulare: East James).

In previous Water Management Board decisions, the Water Management Board has relied upon the 0.83 inches of recharge per year from Kuiper's (1984) results. This recharge rate has been applied over the entirety of Tulare: Western Spink Hitchcock aquifer (263,016 acres), resulting in an estimated average annual recharge of 18,192 acre-feet per year (Buhler, 2012a). There are differences between the modeled area and the area currently delineated as the Tulare: Western Spink Hitchcock aquifer, it is unknown if the modeled recharge rate is reflective of the current area of the aquifer. The boundaries that were used in the development of the model are mostly

consistent with the currently accepted boundaries of the Tulare: Western Spink Hitchcock aquifer, however there are several areas where the model extends the aquifer boundaries to the north and south. The difference in area between Kuiper's model (1984) and Buhler's delineation (2012a) is approximately 74,264 acres (~116 square miles). Most of this extra area, the area not included in Buhler's (2012a) delineation, in Kuiper's model was estimated as having an average recharge rate of 0.8 inches per year, and approximately 1 square mile was estimated as having an average recharge rate of 1.2 inches per year. A simple subtraction of the extra cells from Kuiper's model does not affect the estimated average recharge rate of 0.83 inches per year. It is not clear if a reduction in the area of the model would have affected the estimated recharge rates that Kuiper found to be a best fit for the model area. As part of the modeling process, Kuiper was able to adjust the estimated recharge rate for each cell in order to best fit the model output to the observed water levels in the observation wells that data was available for. As each cell in the model had several input values, changing the extent of the model and adding or removing cells would result in the adjustment of values in other cells to best fit the model output to the observed water elevation data. To account for a change in the model extent, it is unknown if the estimated average recharge rate would increase, stay the same, or decrease.

Buhler (2013) performed a simple regional flow net analysis. This analysis was used to confirm the reasonableness of the average annual recharge estimate from Kuiper (1984). This simple regional flow net analysis is only applicable to the year 2012 and does not provide an estimated average annual recharge rate. The simple regional flow net analysis estimated the recharge rate for 2012 was 0.39 inches per year and showed that Kuiper's average annual recharge estimate was reasonable (Buhler, 2013).

Given the uncertainty involved with applying Kuiper's estimated average annual recharge to the current extent of the Tulare: Western Spink Hitchcock aquifer, it is difficult to determine the estimated average annual recharge to aquifer. The 18,192 acre-feet of recharge per year as calculated by Buhler (2012a) is the best information reasonably available for quantifying the estimated average annual recharge to the Tulare: Western Spink Hitchcock aquifer.

Discharge

Discharge from the Tulare: Western Spink Hitchcock aquifer occurs through well withdrawals, evapotranspiration from areas where the aquifer is near the land surface, outflow to the James River, and possible outflow to other surface waters.

Domestic water use:

There are currently 216 domestic water supply wells on file with the DENR-Water Rights Program that appear to be completed into the Tulare: Western Spink Hitchcock aquifer (Water Rights, 2020d). The volume of water used by domestic wells has not been estimated previously for this management unit, however the use can be estimated using the average rural use for the rural water system in the area as done for the Tulare: East James aquifer (Buhler, 2012b). The 2012 estimated domestic use was 7,000 gallons per tap per month, which equates to an estimated average annual use from domestic wells of 56 acre-feet per year. The actual quantity of water these domestic wells withdraw is unknown; this is the best available and reasonable estimate of domestic water use from the Tulare: Western Spink Hitchcock aquifer.

Appropriative water use:

As of June 17, 2020, there is a total of 159 Licensed or Permitted Water Rights appropriating water from the Tulare: Western Spink Hitchcock aquifer (Water Rights, 2020c). The appropriative water use from the Tulare: Western Spink Hitchcock aquifer is entirely for the irrigation of crops, except for two water rights for commercial use. The total diversion rate for the two commercial use water rights is 0.134 cubic feet per second (60 gallons per minute). If these two water rights were to pump 60% of the year at their maximum diversion rate, they would withdraw 58.1 acre-feet from the aquifer. The estimate of 60% pumping time is commonly used by the Water Rights Program and has been previously accepted by the Water Management Board (Water Rights, 2020c). The remaining 157 water rights are for irrigation. Figure 9 shows how the number of acres authorized for irrigation at the start of each irrigation season (April 1) has changed from 1979 to 2020 and the reported irrigation data for 1979 and 1983 through 2019. The irrigation questionnaires from 1980 through 1982 could not be located, so those years were not included in any calculations. Authorized acres are the acres approved to be irrigated under an existing water right, and the status of the water right could be permitted or licensed. Irrigated acres are the acres indicated as irrigated on the irrigation questionnaire by the irrigator. The annual irrigation summaries have the reported use for the 1980-1982 time period, however the number of acres that were irrigated are not included on the summaries, and it is impossible to investigate any anomalous data.

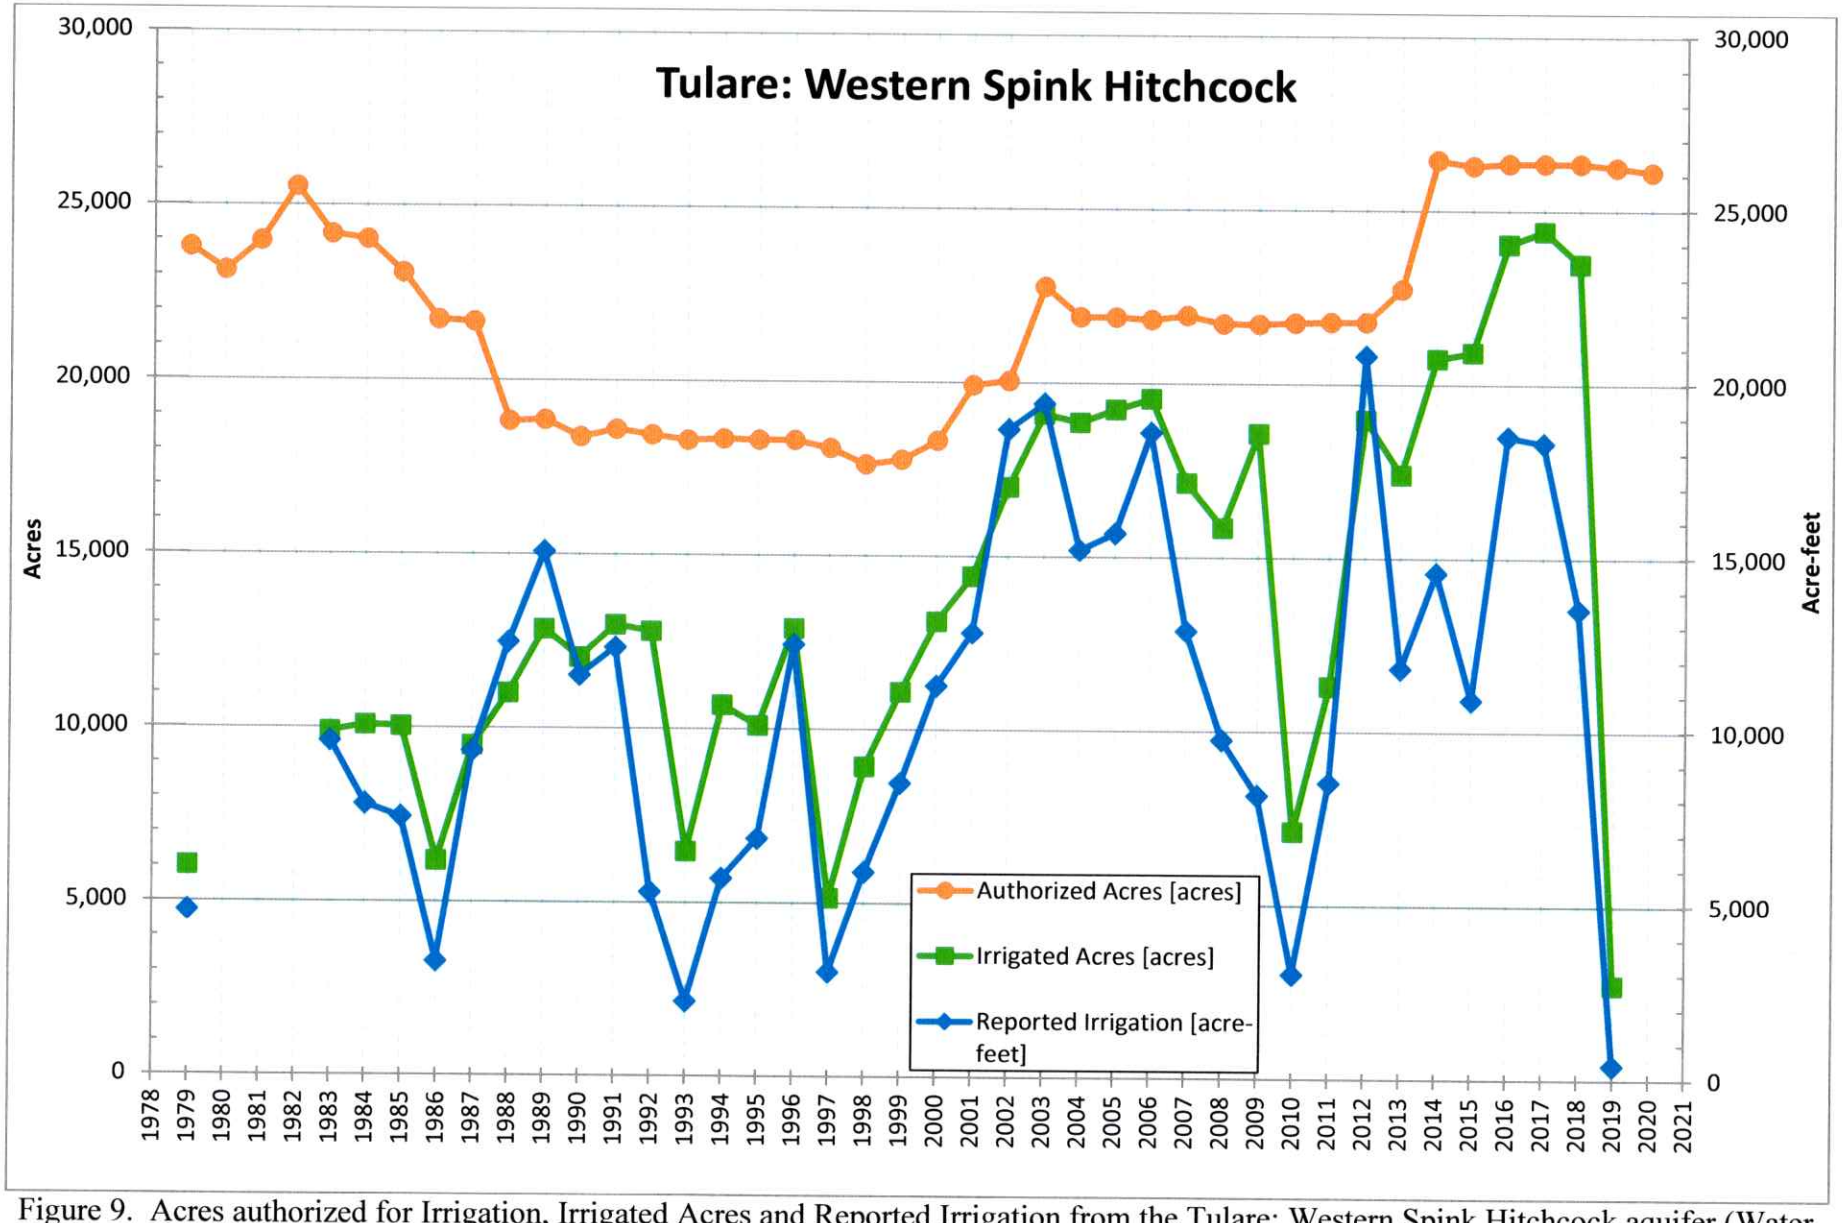

Figure 9. Acres authorized for Irrigation, Irrigated Acres and Reported Irrigation from the Tulare: Western Spink Hitchcock aquifer (Water Rights, 2020c)

Table 2. Irrigation development from the Tulare: Western Spink Hitchcock aquifer (* data not available), (modified from Buhler, 2012a; Mathiowetz, 2012; Water Rights, 2020a; Water Rights, 2020c)

Year	Permits with Acres	Authorized Acres [acres]	Irrigated Acres [acres]	Utilization Rate (Irrigated Acres/Authorized Acres Percentage)	Reported Irrigation [acre-feet]	Average Application Rate for Irrigated Acres [inches]

Using the available reported pumping data from 1979 through 2019, the estimated annual domestic use, and the estimated commercial use, the total well withdrawal from the aquifer is expected to average less than 10,800 acre-feet/year. This total withdrawal from the Tulare: Western Spink Hitchcock aquifer due to pumping is around 0.89% of the estimated recoverable water in storage in the aquifer (10,800 acre-feet pumped per year versus 1,212,330+ acre-feet of recoverable water in storage (Hedges et al., 1982)).

In light of the considerable development that occurred as a result of appropriations made in 2012 and 2013, it is no longer appropriate to consider the entire period of record for determining the estimated average annual withdrawals. Table 3 shows the averages of Table 2 for many different periods of time to include data for comparison from previous reports and methodologies, the effect of a dry year (2012) and the effect of a very wet year (2019). The time periods that have the break between the years of 1979 and 1983 are effectively continuous time periods for all columns, except for the average authorized acres, as demonstrated in the first two rows of data.

Table 3. Averages of data in Table 2 for select time periods.

Period	Average Authorized Acres [acres]	Average Irrigated Acres [acres]	Average Utilization Rate	Average Reported Irrigation [acre-feet]	Average Application Rate for Irrigated Acres [inches]
1979-2019	21,672.06	13,688.28	63.37	10,681.26	9.06
1979, 1983-2019	21,473.25	13,688.28	63.37	10,681.26	9.06
1979-2011	20,791.31	12,250.03	60.09	9,901.47	9.38
1979, 1983-2012	20,494.01	12,466.77	60.96	10,253.30	9.50
1979, 1983-2018	21,344.56	13,984.39	64.80	10,958.55	9.25
2003-2011	21,911.58	16,148.30	73.62	12,346.12	8.80
2003-2018	23,338.16	18,453.51	78.58	13,721.09	8.77
2003-2019	23,508.55	17,528.74	74.57	12,938.76	8.37
2012-2018	25,172.33	21,417.34	84.97	15,488.91	8.74
2012-2019	25,305.15	19,081.73	75.65	13,605.49	7.88
2013-2018	25,739.07	21,825.40	84.61	14,602.34	8.00
2013-2019	25,809.90	19,097.83	74.01	12,576.50	7.12
2014-2018	26,343.30	22,710.64	86.21	15,160.42	7.97
2014-2019	26,325.23	19,380.93	73.58	12,703.93	6.95
2015-2018	26,321.65	23,204.48	88.15	15,307.84	7.85
2015-2019	26,304.30	19,110.06	72.61	12,330.57	6.65

Examination of the average application rate for the time period of Buhler's (2013) report, 1979-2011, shows that the average application rate has been adjusted slightly from Buhler's calculated 9.32 inches to 9.38 inches. This is due to corrections of the underlying water right and irrigation questionnaire data, either from data entry errors, missing irrigation questionnaire data that was not included in Buhler's (2012a) dataset, and resolving instances where the irrigator submitted

data for multiple permits and some values were double counted or not counted at all. The application rate could still change slightly due to corrections in the water right data, locating missing irrigation questionnaire files, identifying when systems were constructed, considering suspensions, and upon further review of the irrigation questionnaires that cover several pivots and/or have been amended, incorporated, or reissued.

In the time since Buhler's report (2012a), the average application rate has varied due to climatic conditions. The time period of 2012-2018 has an average application rate of 8.74 inches, but with the wet year of 2019, the average application rate dropped to 7.88 inches for the time period of 2012-2019. The year of 2012 was dry and saw a high average application rate, the effect of this can be seen by comparing the average application rates between the time periods of 1979-2011 and 1979, 1983-2012; 2012-2018 and 2013-2018; and 2012-2019 and 2013-2019. For the entire period of record, 1979 through 2019, the average application rate has been 9.06 inches.

In Buhler's (2012a) report, the average annual withdrawals were calculated by averaging the irrigation questionnaire summary reports for the years 1979-2011 and adding the estimated domestic use. Table 4 shows the data from the irrigation questionnaire summary reports. The data from the irrigation questionnaire summary reports is currently the best information reasonably available to easily determine how much water has been used by irrigation from an aquifer. These summaries have never been revised to reflect updated data or to correct water sources. There are minor differences between the values in Table 2 and Table 4 for the number of permits and the reported irrigation due to more recent data being represented in Table 2.

Table 4. Annual Summary of Reported Irrigation from the Tulare: Western Spink Hitchcock aquifer (Water Rights, 1980-2020)

Year	Number of Permits Reported	Reported Irrigation [acre-feet]
1979	133	5,265.00

Balance of Recharge to Discharge

At the December 4th, 2002 meeting of the South Dakota Water Management Board, the Western Spink management unit and Hitchcock management unit were combined into a single management unit of the Tulare aquifer. The Tulare: Western Spink Hitchcock management unit was estimated as underlying 288,700 acres, containing 1.212 million acre-feet of recoverable water in storage, and 19,960 acre-feet of annual recharge (Goodman, 2002). Based upon the maximum water use and undeveloped permits, 3,400 acre-ft of water was found to be available. Assuming an application rate of 16 inches, 11 water right permits were issued for the irrigation of 2,654.4 acres as a result of combining management units. The remaining applications were deferred for a period of five years.

In applying SDCL 46-6-3.1, the Sixth Judicial Circuit Court of South Dakota ruled in 2005 that if the Water Management Board uses average annual recharge, then it should also use average annual withdrawals to determine if unappropriated water is available from an aquifer (Hines, Phillip W. v. Department of Environment and Natural Resources, 2005).

At the December 7, 2007 meeting of the South Dakota Water Management Board, the board heard testimony regarding a report on 33 deferred and 4 new water permit applications from the Tulare: Western Spink Hitchcock aquifer management unit (Goodman, 2007). This report used the previous five years of data, 2002-2006, and determined that the reported water use over the 5 years averaged 17,495 acre-feet per year. However, there was "not reported or undeveloped acreage" that were then accounted for by estimating their water use (Goodman, 2007). This estimation brought the estimated average annual use to 19,927 acre-feet per year. The estimated average annual recharge rate was 19,960 acre-feet per year. The 37 water permit applications were denied, and the aquifer management unit was declared fully appropriated.

A set of six new water permit applications were to be brought before the South Dakota Water Management Board on May 2, 2012 in response to the applicants contesting the Chief Engineer's recommendation of denial. As part of this process, a staff engineer reevaluated the availability of unappropriated water. The areal extent of the Tulare: Western Spink Hitchcock aquifer management unit was revised to be 263,016 acres (Buhler, 2012a). The recharge rate as determined by Kuiper (1984) was applied over this areal extent to determine that the estimated average annual recharge is 18,192 acre-feet per year. The average application rate on irrigated acres was 9.32 inches for the period of 1979 through 2011, excluding 1980-1982 due to a lack of data. Applying 18,192 acre-feet of water at a rate of 9.32 inches would allow the irrigation of 23,423 acres. At the time of the report there were 22,838.8 acres authorized for irrigation, the hydrologic budget showed that an additional 584.2 acres could be irrigated without exceeding the average annual recharge. The observation well analysis as calculated by Buhler (2012a) over the years of 1983 to 2011 showed an average rise of 0.34 feet in the unconfined portions of the management unit. The unconfined area was estimated to be 11,149 acres, using a specific yield for the aquifer of 0.15, results in the average annual recharge exceeding average annual withdrawals by 569 acre-feet which, applied at a rate of 9.32 inches allows the irrigation of an additional 733 acres. The applicants entered a stipulation with the Chief Engineer and the Chief Engineer approved 5 of the 6 applications for 810 acres of irrigation. As discussed earlier in the report, the 2011 water year was calculated for only a partial year, if the entire year was used in the calculation, the average observation well rise would change from 0.34 feet per year to 0.30 feet per year. This would reduce the amount recharge exceeds withdrawals from 569 acre-feet per year to 502 acre-feet per year and would have allowed the irrigation of 646 acres.

After a review was conducted on the Tulare: East James aquifer management unit (Buhler, 2012b), it was realized that the previous analysis on the Tulare: Western Spink Hitchcock aquifer management unit was overly conservative (Buhler, 2013). The recharge to acres method that Buhler used in the 2012 and 2013 reports calculated the number of acres that could be irrigated given the total amount of recharge. The difference in the recharge to acres method between the 2012 and 2013 reports is that the 2013 report factors in the number of acres that were irrigated vs the number of acres that were authorized for irrigation, or the utilization rate. The 2012 report assumed 100% of the acres were being irrigated every year, resulting in an additional 584.4 acres that could be irrigated. The 2013 report calculated that on average 69.02% of acres were utilized over the 2003 to 2011 period. The estimated average annual recharge was 18,192 acre-feet per year, which would allow the irrigation of 23,423 acres. At the time of Buhler's report there were 23,648.8 acres authorized for irrigation, applying the utilization rate of 69.02%, Buhler calculated that the expected irrigation acreage would be 16,322.4 acres and that an additional

7,100 acres could be irrigated annually. The Water Management Board did not want to speculate on the future usage of any recently approved acres and did not find the recharge to acres method useful (SD Water Management Board, 2013).

Buhler (2013) delineated a new unconfined area of the aquifer using 3D representations of the October 2012 potentiometric surface and the top of the aquifer. This resulted in an increase in the unconfined area from 11,149 acres to 76,978 acres. The observation well analysis was also recalculated to only include water years that were considered fully developed (water year 2003 through water year 2012). This observation well analysis still included the partial calculation of the water year 2011. The period of water year 2003 to water year 2012 is a period when no additional acres were permitted, it was not a period of being fully developed as the water right permits issued in 2002 were still constructing their systems and placing water to beneficial use. Of the 11 water right permits issued in 2002, the last permits to first place their water to beneficial use occurred during the 2008 irrigation season. The observation well analysis as calculated in Buhler's report (2013) for the period of 2003 to 2012 produced an average rise of 0.3152 feet per year. If the complete water year for 2011 is used in the calculations, the average rise from 2003 to 2012 changes to 0.21 feet per year. If the fully developed period of 2008 through 2012 was used for the calculations, the average rise would be 0.14 feet per year. Using a specific yield of 0.15, the average annual exceedance of recharge to withdrawals would change from 3,640 acre-feet to 2,425 acre-feet for the 0.21 feet per year rise, and 1,617 acre-feet for the 0.14 feet per year rise. Using the average irrigation application rate of 9.32 inches per year, Buhler's report (2013) showed that an additional 4,686 acres could have been irrigated. The number of additional acres that could have been irrigated is reduced to 3,122 acres for the 0.21 feet per year rise, and 2,081 acres for the 0.14 feet per year rise. 810 acres should be subtracted from these estimates as there were 5 water right applications for a total of 810 acres approved for irrigation in 2012. Twelve water right applications were approved to irrigate 2,131 acres on May 2, 2013 and 11 water right applications were approved to irrigate 1,765 acres on July 11, 2013, for a total of 4,706 acres of irrigation approved in 2012 and 2013.

There is no mention in Buhler's 2013 report of how the recently developed permits that were approved in 2002 affected the average annual use over the period of 2003-2011 or if the withdrawals due to the recent permits would be accurately reflected in a calculation for that period. Table 5 shows the permits that have been approved since 2002 for the irrigation of "new" acres, acres that were not previously authorized under an existing water right, and when they placed their appropriated water to beneficial use.

Table 5. Water right permits approving new acres since 2002 (Water Rights, 2020c)

Permit No.	Year Approved	Year water placed to beneficial use
6330-3	2002	2008

7723-3	2013	2014
7724-3	2013	2016
7725-3	2013	2015

A metric other than the total withdrawals over the entire period of record should be utilized to prevent over-appropriation of water from the Tulare: Western Spink Hitchcock aquifer as a result of the 5-year reviews. For example, using Buhler's (2012b) hydrologic budget methodology repeatedly, if the existing data from 1979-2019 is used, with the average withdrawal of 10,681 acre-feet per year, and the years of 2020 through 2024 (5 years) pump an average of 15,000 acre-feet per year, the estimated average annual use over the entire period would rise to 11,183 acre-feet per year. At the end of that 5-year period, there would be an additional 7,000 acre-feet of water which could be appropriated as a result of the 5-year review because the estimated average

annual use is still below the estimated average annual recharge of 18,192 acre-feet. If the next 5-year period pumps an average of 20,000 acre-feet per year, the estimated average annual use over the entire period would rise to 12,101 acre-feet per year. At the end of this 5-year period, there would be an additional 6,000 acre-feet of water which could be appropriated. If the next 5-year period pumps an average of 25,000 acre-feet per year, the estimated average annual use over the entire period of record would rise to 13,318 acre-feet per year. If withdrawals continued to average 25,000 acre-feet per year with no additional appropriations, it would take fewer than 50 years for the average annual withdrawal over the entire period of record, to exceed the average annual recharge to the aquifer. By the time the average annual withdrawals reach the average annual recharge, the aquifer will be well over-appropriated, and the average annual withdrawals will continue to increase into the future. Repeated use of this methodology will result in the aquifer being over-appropriated in the future.

Figure 9 shows the number of irrigated acres approaching the number of authorized acres, indicating that irrigation practices have changed in the area of the Tulare: Western Spink Hitchcock aquifer. These changes may be due to climate, modern farming practices, crop prices, the production of ethanol, and the consolidation, relocation, and transference of irrigation water rights. Appendix A contains an approximate timeline of events regarding Water Rights in the Tulare: Western Spink Hitchcock aquifer, including the amending and transferring of acres to other lands.

Use of the average application rate and the utilization of acres would be a better determination of the estimated average annual use when the number of authorized acres has not remained constant. The application rate is the reported use divided by the number of irrigated acres and the utilization of acres is the number of irrigated acres divided by the number of authorized acres. The average application rate would account for factors regarding the climate over time, allowing for consideration of both dry and wet periods. The average utilization of acres would account for factors regarding farming practices, this could be looked at on a shorter period to allow for recent changes to be in effect.

As of the beginning of the 2020 irrigation season, there are 26,104.9 acres authorized for irrigation. Applying the average application rate (1979, 1983-2019) of 9.06 inches over the authorized acres results in an estimated average annual use of 19,709 acre-feet of water. While it is impossible for the average percentage of irrigated acres to authorized acres to ever reach 100% over the entire period of record, 4 out of the 8 years (2012-2019) since Buhler's (2013) report have exceeded 87% utilization of authorized acres with the maximum utilization reaching 92.7% in 2017. The utilization rate of authorized acres and the estimated average annual use using the average application rate of 9.06 inches for authorized acres is calculated in Table 6.

Table 6. Utilization Rate of Authorized Acres and Estimated Average Annual Use calculated using 26,104.9 authorized acres and the application rate of 9.06 inches

Average Utilization Rate of Authorized Acres	Estimated Average Annual Use [acre-feet per year]
100%	19,709
60.1% (1979-2011)	11,845
63.4% (1979-2019)	12,496

73.6% (2003-2011)	14,506
87% (exceeded by 4 out of 8 previous years)	17,147
92.7% (2017)	18,270
85% (2012-2018)	16,753
75.6% (2012-2019)	14,900
88.2% (2015-2018)	17,384
72.6% (2015-2019)	14,309

Kuiper's model estimated the recharge to the aquifer to best simulate the observed observation well hydrographs over the period of 1968 to 1978. It is unknown how well this model fits the last 42 years of observation well data. Kuiper's model estimated the average annual recharge to the Tulare: Western Spink Hitchcock aquifer to be 23,000 acre-feet per year, within the boundaries of the model. Given the currently identified boundaries of the Tulare: Western Spink Hitchcock aquifer and the mismatch to the model boundaries, it is improper to assume that a spatially variable recharge rate can be averaged out across the model area and then applied to a significantly reduced aquifer area. The estimated average annual recharge is unknown for the currently identified boundaries of the Tulare: Western Spink Hitchcock aquifer, and while improper, use of the 0.83 inches per year of recharge as calculated from Kuiper's model across the entire area of the aquifer (263,016 acres) is the best reasonably available estimate of the average annual recharge to the Tulare: Western Spink Hitchcock aquifer. The estimated average annual recharge to the Tulare: Western Spink Hitchcock aquifer is 18,192 acre-feet per year.

Given the uncertainties involved with the estimated average annual recharge model, it is unknown if the estimated average annual recharge rate of 18,192 acre-feet per year as used in past reports is above or below the actual recharge rate. Using the average application rate of 9.06 inches over the period of record and the current authorized acreage, the estimated average annual use for irrigation withdrawals using the average utilization rate (72.6%) for the time period of 2015-2019 is 14,309 acre-feet per year. Excluding the abnormally wet year of 2019, the average utilization rate for the time period of 2015-2018 better reflects the expected usage of the Tulare: Western Spink Hitchcock for the current authorized acreage. Assuming recent irrigation practices continue, the best reasonable estimated withdrawals from irrigation use is the 17,384 acre-feet per year as calculated using the utilization rate from 2015-2018 of 88.2%, the total of 26,104.9 authorized acres, and the average application rate of 9.06 inches on irrigated acres over the period of record. However, during the time period of 2015-2019, permitted appropriations were still being constructed and placed to beneficial use.

With the continual increase in placing water to beneficial use through 2018, it is currently unknown what an average utilization rate may be over a longer period, and it may be more appropriate to estimate the usage from irrigated acres at full utilization. In addition to the new appropriations placing their water to beneficial use, there has been ongoing transferring and moving of acres and diversion points across the management unit (see Appendix A), resulting in existing appropriations being placed to better use. If the authorized acres were fully utilized, with an application rate of 9.06 inches, the estimated average annual use for irrigation is 19,709 acre-feet per year.

The hydrologic budget provides a quantitative approach to the availability of unappropriated water. Within the hydrologic budget, the estimated average annual use for domestic use is 56 acre-feet per year, and the estimated average annual use for commercial use is 58 acre-feet per year. The hydrologic budget also estimates that the estimated average annual use from irrigation is 17,384 acre-feet per year assuming current irrigation trends continue, or 19,709 acre-feet per year assuming that all acres are fully utilized. If the current irrigation trend (2015-2018 time period) continues, the hydrologic budget estimates that there is an average of 17,498 acre-feet of water used per year. If the current irrigation trend does not continue and authorized acres continue to see increasing use, assuming full use of the authorized acres would result in the hydrologic budget estimating that the average annual use is 19,823 acre-feet of water per year. The estimated average annual recharge is 18,192 acre-feet per year. If current irrigation trends continue, there were would be 694 acre-feet of water available for appropriation from the hydrologic budget. If current irrigation trends do not continue and there is an increase in the usage of the authorized acres, the maximum estimated average annual use is the full utilization of authorized acres and would exceed the estimated average annual recharge by 1,631 acre-feet per year. In order for the recently developed systems and recently moved systems to be properly reflected in application rate and utilization rate data, it would be reasonable to estimate the average annual use by assuming full utilization of the authorized acres. Based upon the full utilization of acres for irrigation, the hydrologic budget shows that there is no unappropriated water available from the Tulare: Western Spink Hitchcock aquifer.

CONCLUSIONS

1. The Tulare: Western Spink Hitchcock aquifer is a glacial outwash aquifer that is generally found under confined conditions and buried under a layer of glacial till.

2. The best information currently available indicates that the Tulare: Western Spink Hitchcock aquifer underlies approximately 263,016 acres of Spink, Beadle, and Hand Counties.

3. The SD DENR-Water Rights Program observation well data documents that over the period of 1983 through 2018, the water level in the unconfined portions of the Tulare: Western Spink Hitchcock aquifer has increased an average of 0.18 feet per year.

4. Appropriations made in 2012 and 2013 relied upon the water level increase in the unconfined portions of the Tulare: Western Spink Hitchcock aquifer. There is no water available for appropriation from the 0.18 feet per year rise calculated over the period of 1983-2018 as it was already accounted for in prior appropriations.

5. The SD DENR-Water Rights Program observation well data documents that over the period of 2013 through 2018, the water level in the unconfined portions of the Tulare: Western Spink Hitchcock aquifer has decreased an average of 0.02 feet per year.

6. The SD DENR-Water Rights Program observation well data documents that over the period of record the configuration of the potentiometric surface of the Tulare: Western Spink Hitchcock aquifer has not changed significantly with time or increased development. The elevation of the potentiometric surface has changed throughout time,

however the direction of groundwater flow has not been significantly affected by withdrawals.

7. The estimated average annual recharge to the Tulare: Western Spink Hitchcock aquifer was estimated as 23,000 acre-feet per year by Kuiper's model. The estimated average annual recharge is 18,192 acre-feet per year due to a reduction in the areal extent of the aquifer since the development of Kuiper's model.

8. Kuiper's recharge rate was based upon 11 years of observation well data between 1968 and 1978. Thirty-two observation wells have been drilled into the Tulare: Western Spink Hitchcock aquifer since 1978 and there are 42 additional years of observation well data since 1978.

9. It is improper to assume the spatially variable recharge rate found in Kuiper's model can be averaged across the model domain and then applied to a significantly reduced area. Although it is unknown what the effects of a reduced area are, the current best estimated average annual recharge to the Tulare: Western Spink Hitchcock aquifer is 18,192 acre-feet per year.

10. The Tulare: Western Spink Hitchcock aquifer currently has 159 permitted or licensed water rights appropriating water. Of these, 157 water rights currently authorize the irrigation of 26,104.9 acres. The other 2 water rights are for commercial use for 0.096 cubic feet per second of water.

11. All water right permits approved since 2012 have placed their water to beneficial use as of the 2018 irrigation season.

12. There is one water year over the period of record that would show the balance of recharge to withdrawals from the observation well data at the current level of appropriations, and that year (water year 2019) was an anomalously wet year.

13. The continued moving of authorized acres and diversion points to other lands is increasing the usage of authorized acres over time by placing water to a better beneficial use.

14. Excluding the anomalously wet year of 2019, the authorized acres saw a utilization rate of 88.2% over the years of 2015-2018. Including the anomalously wet year of 2019, the authorized acres saw a utilization rate of 72.6% over the years of 2015-2019.

15. The application rate on irrigated acres over the period of record (1979,1983-2019) is 9.06 inches.

16. Assuming current irrigation trends continue, the estimated average annual use from the Tulare: Western Spink Hitchcock aquifer is 17,384 acre-feet per year at 88.2% utilization of authorized acres.

17. If all acres that are authorized for irrigation (26,104.9 acres) apply the average application rate of 9.06 inches, the estimated average annual use from the Tulare: Western Spink Hitchcock aquifer is 19,709 acre-feet per year.

18. Based upon the downward trend observed in the observation well analysis over the time period of 2013-2018, the hydrologic budget, and the lack of a stable period of development, there is not a reasonable probability that unappropriated water is available from the Tulare: Western Spink Hitchcock aquifer.

Notice of Hearing

August 24, 2020

TO: Hamilton Family LLC, c/o Scott Hamilton
37987 191th St
Hitchcock SD 57348

FROM: Eric Gronlund, Chief Engineer Eric Gronlund

SUBJECT: Five-Year Review to Determine the Availability of Unappropriated Water in the Tulare Western Spink Hitchcock Aquifer concerning held Application No(s). 8132-3.

IMPORTANT: Your written response is required within 30 days notifying the Chief Engineer whether you want Application No(s). 8132-3 to retain eligibility for any water that may become available from the aquifer. Failure to provide a written response results in withdrawal of your held application(s).

The Water Management Board (Board) has determined that the average annual withdrawal of water from the Tulare Western Spink Hitchcock aquifer is equal to the average estimated annual recharge and deemed the aquifer fully appropriated. A map showing the approximate boundary of the aquifer; a copy of a public notice; and a report prepared for the Board to review will be available for public viewing on September 17, 2020, at https://denr.sd.gov/ap.

Pursuant to statute, the Board held a hearing for the purpose of accepting applications for potential future appropriations from the aquifer and a creation of a priority list. That hearing was held on May 7, 2015. Twenty-eight applications were prioritized and are being held by the Board for possible future action. Included in the twenty-eight applications, is/are the application(s) submitted by Hamilton Family LLC, c/o Scott Hamilton: 8132-3 - SW 1/4 Sec 15-T113N-R65W.

Pursuant to SDCL 46-2A-7.5, the Board is required to hold a public hearing reviewing the groundwater source, all permits appropriating water from that source, and all held applications (such as yours) at least once every five years to determine whether unappropriated water has become available for use. Also, SDCL 46-2A-7.5 requires any applicant, such as yourself, to notify the chief engineer in writing within thirty days of receipt of this notice whether you desire to retain eligibility to appropriate any water that the board may determine is available through its review of the aquifer. Failure to respond in writing within 30 days constitutes withdrawal of the application(s).

The five-year review is scheduled for Board consideration at 10:30 AM (Central Time), on Wednesday, October 7, 2020, at the Floyd Matthew Training Center, Joe Foss Building, 523 E. Capitol Avenue, Pierre SD. You do NOT need to be present at the hearing for your application(s) to retain eligibility.

The Board is authorized to 1) determine that additional water is available for appropriation, 2) determine that no additional water is available for appropriation, or 3) defer action for further study. The hearing time is an estimate and may be delayed due to prior items on the agenda. Pursuant to SDCL 46-2-9, 46-2-11, and 46-2A-7.5, the Board has legal authority and jurisdiction to conduct this hearing. After the hearing is conducted by the Board, you will be notified of the Board's decision.

Notice is given to individuals with disabilities that this hearing is being held in a physically accessible place. Please notify the Department of Environment and Natural Resources at least 48 hours before the hearing if you have a disability for which special arrangements must be made at the hearing. The telephone number for making arrangements is (605) 773-3352.

Questions regarding the hearing process may be directed to Ron Duvall, Water Rights Program at (605) 773-3352 or ron.duvall@state.sd.us.

Notice

October 13, 2020

TO: Hamilton Family LLC, c/o Scott Hamilton
37987 191th St
Hitchcock SD 57348

FROM: Eric Gronlund, Chief Engineer Eric Gronlund

SUBJECT: Board Action Concerning Five-Year Review to Determine the Availability of Unappropriated Water in the Tulare Western Spink Hitchcock Aquifer and Fee Submittal Concerning held Application No(s). 8132-3.

On October 7, 2020, the Board did not find sufficient water available to allow processing of held Application No(s). 8132-3. If you wish No(s). 8132-3 to continue to be held by the Board in the event water becomes available at some future date, then a fee equal to ten percent of your original application fee needs to be submitted to the Chief Engineer by November 20, 2020. Ten percent of your original application fee(s) is/are: 8132-3 - $85.00.

Pursuant to South Dakota Codified Law 46-2A-7.5, failure to remit the fee(s) constitutes withdrawal of Application No(s). 8132-3. If the fee(s) is/are not remitted by November 20, 2020, you will be notified of withdrawal of the application(s). Once withdrawn, an application will no longer be in line for an appropriation should it be determined at a future date that unappropriated water is available.

If you have any questions, please contact Ron Duvall, Water Rights Program at (605) 773-3352 or ron.duvall@state.sd.us. The fee(s) is/are payable to the Water Rights Program and should be sent to:

NOTICE OF HEARING

To: Hamilton Family LLC, c/o Scott Hamilton
37987 191th St
Hitchcock SD 57348

From: Mark Mayer, PE
Acting Chief Engineer

Subject: Five-Year Review to Determine the Availability of Unappropriated Water in the Tulare: Western Spink Hitchcock Aquifer concerning held Application No(s). 8132-3

Important: Your written response is required within 30 days, notifying the acting Chief Engineer whether you wish for Application No(s). 8132-3 to retain eligibility for any water that may become available from the aquifer. Failure to provide a written response results in withdrawal of your held application(s). Send response to: Atten. Amanda Dewell, Water Rights Program, 523 E. Capitol Ave., Pierre SD 57501.

The Water Management Board (Board) previously determined the average annual withdrawal of water from the Tulare: Western Spink Hitchcock Aquifer is equal to the average estimated annual recharge and deemed the aquifer fully appropriated. Pursuant to South Dakota Codified Law (SDCL) 46-2A-7.1, the Board held a hearing for the purpose of accepting applications for potential future appropriations from the aquifer and created a priority list. The hearing was held on May 7, 2015. Twenty-eight applications were prioritized and held by the Board for possible future action.

Pursuant to SDCL 46-2A-7.5, the Board is required to hold a public hearing reviewing the groundwater source, all permits appropriating water from that source, and all held applications (such as yours) at least once every five years, to determine whether unappropriated water has become available for use. On October 7, 2020, the first five-year review was conducted by the Board. During the review, the Board decided water was not available for appropriation. Currently, twenty-seven applications remain in held status since one application was withdrawn. Included in the twenty-seven applications, is/are the application(s) submitted by Hamilton Family LLC, c/o Scott Hamilton: 8132-3 - SW 1/4 Sec 15-T113N-R65W.

The next five-year review by the Board is scheduled for 10:15 AM (Central Time), on Wednesday, October 1, 2025, at the Floyd Matthew Training Center, Joe Foss Building, 523 E Capitol Ave, Pierre SD 57501. You do NOT need to be present at the hearing for your application(s) to retain eligibility. However, SDCL 46-2A-7.5 requires any applicant, such as yourself, to notify the Chief Engineer in writing within thirty days of receipt of this notice, whether you desire to retain eligibility to appropriate any water the Board may determine is available. Failure to respond in writing within 30 days constitutes withdrawal of your application(s).

A 2025 aquifer status report has been prepared for the Board's consideration. The 2025 aquifer status report and a copy of a public notice to be published concerning the October 1, 2025, hearing are both available online at https://danr.sd.gov/OfficeOfWater/WaterRights/aquifer/ or a hard copy will be provided upon request.

At the October 1, 2025, hearing, the Board is authorized to 1) determine that additional water is available for appropriation, 2) determine that no additional water is available for appropriation, or 2) defer action for further study. The hearing time is an estimate and may be delayed due to prior items on the agenda. Pursuant to SDCL 46-2-9, 46-2-11, and 46-2A-7.5, the Board has legal authority and jurisdiction to conduct this hearing. After the hearing is conducted by the Board, you will be notified of the Board's decision.

Notice is given to individuals with disabilities that the meeting is being held in a physically accessible location. Individuals requiring assistive technology or other services in order to participate in the meeting or materials in an alternate format should contact Brian Walsh, Nondiscrimination Coordinator, by calling (605) 773-5559 or by email at Brian.Walsh@state.sd.us as soon as possible but no later than two business days prior to the meeting in order to ensure accommodations are available.

Questions regarding the hearing process, or a copy of the report and public notice, may be directed to Amanda Dewell (Amanda.Dewell@state.sd.us) or Ron Duvall (Ron.Duvall@state.sd.us), Water Rights Program at (605) 773-3352.

NOTICE OF HEARING

To: Hamilton Family LLC, c/o Scott Hamilton
37987 191th St
Hitchcock SD 57348

From: Mark Mayer, PE
Acting Chief Engineer

Subject: **Re-Scheduled** Five-Year Review to Determine the Availability of Unappropriated Water in the Tulare: Western Spink Hitchcock Aquifer concerning held Application No(s). 8132-3

The Water Management Board (Board) previously determined the average annual withdrawal of water from the Tulare: Western Spink Hitchcock Aquifer is equal to the average estimated annual recharge and deemed the aquifer fully appropriated. Pursuant to South Dakota Codified Law (SDCL) 46-2A-7.1, the Board held a hearing for the purpose of accepting applications for potential future appropriations from the aquifer and created a priority list. The hearing was held on May 7, 2015. Twenty-eight applications were prioritized and held by the Board for possible future action.

Pursuant to SDCL 46-2A-7.5, the Board is required to hold a public hearing reviewing the groundwater source, all permits appropriating water from that source, and all held applications (such as yours) at least once every five years, to determine whether unappropriated water has become available for use. On October 7, 2020, the first five-year review was conducted by the Board. During the review, the Board decided water was not available for appropriation. Currently, twenty-seven applications remain in held status since one application was withdrawn. Included in the twenty-seven applications, is/are the application(s) submitted by Hamilton Family LLC, c/o Scott Hamilton: 8132-3 - SW 1/4 Sec 15-T113N-R65W.

The next five-year review by the Board is scheduled for **9:45 AM (Central Time), on Wednesday, December 3, 2025, at the Floyd Matthew Training Center, Joe Foss Building, 523 E Capitol Ave, Pierre SD 57501**. You do NOT need to be present at the hearing for your application(s) to retain eligibility.

A 2025 aquifer status report has been prepared for the Board's consideration. The 2025 aquifer status report and a copy of a public notice to be published concerning the December 3, 2025, hearing will both be available online at https://danr.sd.gov/OfficeOfWater/WaterRights/aquifer/ or a hard copy will be provided upon request. At the December 3, 2025, hearing, the Board is authorized to 1) determine that additional water is available for appropriation, 2) determine that no additional water is available for appropriation, or 2) defer action for further study. The hearing time is an estimate and may be delayed due to prior items on the agenda. Pursuant to SDCL 46-2-9, 46-2-11, and 46-2A-7.5, the Board has legal authority and jurisdiction to conduct this hearing. After the hearing is conducted by the Board, you will be notified of the Board's decision.

Notice is given to individuals with disabilities that the meeting is being held in a physically accessible location. Individuals requiring assistive technology or other services in order to participate in the meeting or materials in an alternate format should contact Brian Walsh, Nondiscrimination Coordinator, by calling (605) 773-5559 or

by email at Brian.Walsh@state.sd.us as soon as possible but no later than two business days prior to the meeting in order to ensure accommodations are available.

Questions regarding the hearing process, or a copy of the report and public notice, may be directed to Amanda Dewell (Amanda.Dewell@state.sd.us) or Ron Duvall (Ron.Duvall@state.sd.us), Water Rights Program at (605) 773-3352.

CERTIFICATION

Notice of Entry of Order

December 5, 2025

TO: Hamilton Family LLC, c/o Scott Hamilton
37987 191th St
Hitchcock SD 57348

FROM: for Mark Mayer, Acting Chief Engineer
SD DANR, Water Rights Program

SUBJECT: Water Management Board Action Concerning Five-Year Review to Determine the Availability of Unappropriated Water in the Tulare Western Spink Hitchcock Aquifer Concerning held Application No(s). 8132-3.

On December 3, 2025, the Water Management Board found sufficient water available to allow processing of your held Application(s) pursuant to South Dakota Codified Law 46-2A-7.6. Consequently, please respond no later than December 22, 2025, whether you wish to proceed with processing of your held Application No(s). 8132-3 - SW 1/4 Sec 15-T113N-R65W or whether you want to withdraw the application(s). If you have multiple held applications, please identify for each application whether you wish to proceed with processing of the application or withdraw the application. Responses postmarked on or before Tuesday, December 22, 2025, may be mailed to:

Atten. Amanda Dewell
SD DANR, Water Rights Program
523 E. Capitol Ave.
Pierre SD 57501

Or responses may be sent via email to amanda.dewell@state.sd.us by 5:00 PM Central Time, Tuesday, December 22, 2025.

If no response is received by the deadline, or you decide to withdraw your application(s), you will be notified of a hearing for the Water Management Board to withdraw the application(s). Once withdrawn, an application will no longer be in line for an appropriation. Upon a Board decision to withdraw the application(s), your application fee(s) will be refunded.

If you opt to have your application(s) processed, a staff report and chief engineer's recommendation will be prepared, and then publication of a notice of hearing before the Water Management Board. You will be provided the staff report, chief engineer's recommendation, and given instructions concerning publication of the notice of hearing. It may take up to 60 days for this to be provided to you.

If you have any questions, please contact Amanda Dewell, Water Rights Program at (605) 773-3352 or amanda.dewell@state.sd.us.

CERTIFICATION

The undersigned hereby certifies under the penalty of perjury that a true and correct copy of a **Notice of Entry of Order** dated December 5, 2025, regarding Water Management Board action following the 2025 Five-Year Review of the **Tulare: Western Spink Hitchcock Aquifer** was served upon the following applicants by enclosing the same in an envelope and sent via certified United States mail on December 5, 2025.

RECOMMENDATION OF ACTING CHIEF ENGINEER FOR WATER PERMIT APPLICATION NO. 8132-3, Hamilton Family LLC

Pursuant to SDCL 46-2A-2, the following is the recommendation of the Acting Chief Engineer, Water Rights Program, Department of Agriculture and Natural Resources concerning Water Permit Application No. 8132-3, Hamilton Family LLC, 37989 191st Street, Hitchcock SD 57348.

The Acting Chief Engineer is recommending APPROVAL of Application No. 8132-3 because 1) there is reasonable probability that there is unappropriated water available for the applicant's proposed use, 2) the proposed diversion can be developed without unlawful impairment of existing domestic water uses and water rights, 3) the proposed use is a beneficial use and 4) it is in the public interest as it pertains to matters of public interest within the regulatory authority of the Water Management Board with the following qualifications:

1. The well approved under Water Permit No. 8132-3 is located near domestic wells and other wells which may obtain water from the same aquifer. The well owner, under this Permit must control withdrawals so there is not a reduction of needed water supplies in adequate domestic wells or in adequate wells having prior water rights.

2. The proposed well authorized by Permit No. 8132-3 must be constructed by a licensed well driller and construction of the well and installation of the pump must comply with Water Management Board Well Construction Rules, Chapter 74:02:04 with the well casing pressure grouted (bottom to top) pursuant to Section 74:02:04:28.

3. This Permit is approved subject to the irrigation water use questionnaire being submitted each year.

See report on application for additional information.

Adam Mathiowetz, PE
Acting Chief Engineer
March 20, 2026

Report to the Chief Engineer on
Water Permit App. Nos. 8131-3, 8132-3, and 8133-3
Scott Hamilton or Hamilton Family, LLC
2026 March 4

The applications discussed in this report have the same signatory, Scott Hamilton. In October 2013, the Water Management Board declared the Tulare: Western Spink-Hitchcock aquifer was fully appropriated. Following legislation in 2014, a procedure was established for prioritizing waitlisted applications in aquifers that are fully appropriated. These applications have a priority date of February 25, 2015, but a separate rank assigned by lottery at the May 7, 2015, Board meeting. Figure 1 below is a map of the held applications in this report and , nearby water rights [1], and Water Rights Program observation wells [2]. Table 1 provides details of the water right permits and applications in Figure 1 [1].

Water Permit Application No. 8131-3 (Scott Hamilton) proposes to appropriate 2.00 cubic feet of water per second (cfs) from up to two wells to be completed in the approximate center of the SE ¼ Section 10 for irrigation of 290 acres in the E ½ Section 10; all in T113N-R65W. This application is priority of 6 out of 27 on the waitlist and is in Beadle County approximately 11 miles west-southwest of Hitchcock, South Dakota.

Water Permit Application No. 8132-3 (Hamilton Family, LLC) proposes to appropriate 2.00 cfs from up to two wells to be completed into the Tulare: Western Spink-Hitchcock aquifer in the approximate center of the SW ¼ Section 15 for irrigation of 145 acres located in the SW ¼ Section 15; all in T113N-R65W. This application is priority of 27 out of the 27 on the waitlist and is in Beadle County, approximately 11 miles southwest of Hitchcock, South Dakota.

Water Permit Application No. 8133-3 (Scott Hamilton) proposes to appropriate 2.00 cfs from up to two wells to be completed in the Tulare: Western Spink-Hitchcock aquifer, located in the NE ¼ NE ¼ Section 11 for irrigation of 145 acres in the NE ¼ Section 11; all in T113N-R65W. This application is priority of 15 out of 27 on the waitlist and is in Beadle County, approximately 10 miles west of Hitchcock, South Dakota.

Aquifer: Tulare: Western Spink-Hitchcock

Hydrogeologic Characteristics

The Tulare aquifer is a Quaternary-aged system of sand and gravel layers that were deposited as outwash by meltwater from receding glaciers. The Western Spink-Hitchcock management unit of the Tulare aquifer is a buried aquifer generally lying immediately above the bedrock (a.k.a. basal) [3] [4]. The bedrock is composed of an erosional surface of exposed Cretaceous-aged Pierre Shale and Niobrara Formation, with the lowest erosional surface possibly incising into the Carlile Shale, which contains the Codell Sandstone member [5]. The Niobrara Formation and Codell Sandstone can also be aquifers in portions of South Dakota [2] [1]. The Tulare: Western Spink-Hitchcock aquifer underlies approximately 260,000 acres of Hand, Spink, and Beadle Counties [6] [7]. The Tulare aquifer has an average thickness of 37 feet [8]. Assuming a porosity of 0.15 [9], the estimated recoverable water in storage in the Tulare: Western Spink-Hitchcock aquifer is approximately 1.4 million acre-feet. The Tulare: Western Spink-Hitchcock aquifer is hydrologically connected to several Quaternary and Cretaceous aged aquifers in physical contact with it. Buhler [10] estimated that approximately 77,000 acres of the Tulare: Western Spink-Hitchcock aquifer were under unconfined conditions in October 2012, and showed that at the time, a majority of the aquifer was under confined conditions. The area of the aquifer under confined conditions fluctuates with the amount of water in the aquifer. Since water is essentially incompressible, when the aquifer has more water in storage, more area becomes confined and vice-versa for when there is less water in the aquifer.

The applicant did not submit any well completion reports with these applications, but sufficient information is available to complete the technical review. A South Dakota Geologic Survey (SDGS) lithologic log approximately a third of a mile south of the proposed well for App. No. 8132-3 indicates the driller encountered yellow-brown sand and gravel from 5 to 6 feet below grade, light-brown sand from 6 to 13 feet, and coarse, light-gray sand from 13 to 16 feet [3]. A well completion report, completed on October 26, 1977, in the SW ¼ SW ¼ of the same section as App. No. 8132-3 indicates the driller encountered fine gravel from 8 to 27 feet below grade

[4]. A lithologic log drilled using an auger in the Section 10 T113N-R65W, which is 0.6 miles southwest of App. No. 8131-3 indicates the driller encountered sand from 3 to 11 feet, gravel from 11 to 31 feet, no sample from 31 to 72 feet, and Pierre Shale from 72 to 92 feet [3]. The geologist on site, L. Howells, indicated the interval between 31 to 72 feet was likely clayey gravel and sand, with harder zones that are clay or have greater clay content [3]. A well completion report in the SE ¼ SE ¼ Section 2 T113N-R65W dated April 9, 1979, which is approximately a 0.6 mile north of App. No. 8133-3, indicates the driller encountered sand from 2 to 54 feet below grade and the well had a static water level of 18 feet below grade at the time the well was completed. This data and available mapping [11] indicate the aquifer is likely to be thin and narrow in the southwest, thickening up to the northeast.

Applicable South Dakota Codified Law (SDCL)

Pursuant to SDCL 46-2A-9, a permit to appropriate water may be issued if there is reasonable probability that there is unappropriated water available for the applicant's proposed use, that the proposed diversion can be developed without unlawful impairment of existing domestic water uses and water rights, and that the proposed use is a beneficial use and in the public interest as it pertains to matters of public interest within the regulatory authority of the Water Management Board. This report will only assess the availability of water and possibility of developing these applications without unlawful impairment of existing domestic water uses and water rights.

Pursuant to SDCL 46-6-3.1, no application to appropriate groundwater may be approved if, according to the best information reasonably available, it is probable that the quantity of water withdrawn annually from a groundwater source will exceed the quantity of the average estimated annual recharge of the water to the groundwater source. An exception allows water distribution systems to withdraw from groundwater sources older or stratigraphically lower than the Greenhorn Formation regardless of the results of a hydrologic budget. The applicant is not a water distribution system as defined in SDCL 46-1-6(17) and the Tulare: Western Spink-Hitchcock aquifer is younger and stratigraphically higher than the Greenhorn Formation [12]. Therefore, the Water Management Board must find that recharge to the aquifer exceeds withdrawals to approve these applications.

Following the October of 2013 Board hearing, the Board determined that the Tulare: Western Spink-Hitchcock aquifer was fully appropriated. In 2014, the South Dakota Legislature established procedure in SDCL 46-2A-7 through 7.1 for holding applications and establishing priority when the Water Management Board declares an aquifer is fully appropriated. These applications were submitted prior to February 25, 2015, pursuant to that procedure. The applicant retained eligibility through the first and second five-year reviews. After the second five-year review on December 3, 2025, the Board determined that unappropriated water was available and the permits on hold were to be processed as established by State administrative rule and State law.

Availability of Water

Hydrologic Budget

The current hydrologic budget of the Tulare: Western Spink-Hitchcock aquifer was presented before the Water Management Board in December of 2025 [11] and is summarized below. The estimated average annual recharge to the aquifer is approximately 0.83 inches per acre [13], which equates to 18,000 ac-ft/yr over the currently estimated extent of the aquifer. Withdrawals from the aquifer are mainly by irrigation from appropriative users. By taking the sum of the average irrigation reported for each permit, Drennon [11] estimated the average annual withdrawal from the aquifer was between 12,000 and 13,000 ac-ft/yr depending on the range of data used. Irrigators have been applying fewer inches per acre as time goes on but irrigating a higher proportion of their permitted acreage in any given year. The estimated average annual withdrawal from irrigation was approximately 12,000 ac-ft/yr for the period of record of 2015 through 2024, which is the last ten years of reports. Based on this hydrologic budget, there is approximately 6,000 ac-ft/yr of unappropriated water available. At the meeting, members of the Water Management Board expressed discomfort at approving the entire 6,000 acre-feet of unappropriated water but did not issue an order specifying an exact amount to which they would limit withdrawals.

For the last ten years of record, the average irrigation per reported acre was 6.63 inches per year and permit holders irrigated 79% of their permitted acres [11]. For the period of record of 1979 through 2024, the average irrigation per reported acre was 8.89 inches per year and permit holders irrigated on average 65% of their permitted acres [11]. The applications in this report request a combined total appropriation of 6.00 cfs for 580 acres of irrigation. Using the above values, their estimated average annual withdrawal is likely to be between 253 and 279 ac-ft/yr. The total withdrawal of the 27 held applications is likely to range between approximately 2,300 and 2,500 ac-ft/yr. Therefore, based on the hydrologic budget, there is reasonable probability that unappropriated water is available for all three of these applications.

Table 2: Estimated withdrawals for the 27 held applications. Several applicants hold multiple applications [11].

Applicant with Held Permit(s)	Total Requested CFS	Total Requested Acres	Est. Withdrawal (ac-ft/yr)	
			6.63 in/yr @ 79% acreage utilization	8.89 in/yr @ 65% acreage utilization

Observation Wells

Administrative Rule of South Dakota (ARSD) 74:02:05:07 requires the Water Management Board to rely upon the record of observation well analysis in addition to other information to ensure that recharge to the aquifer exceeds withdrawals. The Water Rights Program maintains 55 observation wells completed into the Tulare: Western Spink-Hitchcock aquifer. The nearest observation wells to the proposed wells for these applications are Observation Wells BD-80A, BD-80B, and BD-80BR. The locations of those wells with respect to these applications are shown in Figure 1 (page 2). They are all approximately 6 to 8 miles east of the proposed wells for the applications addressed in this report and are representative of the general behavior of the aquifer near those observation wells. Given the distance between the proposed wells for the applications in this report and the nearest observation wells, conditions may be slightly different near the proposed wells in this report. Figure 2 shows the water elevations in the three nearest observation wells to these applications. In general, water levels rise during periods of higher-than-average precipitation and decline during periods of lower-than-average precipitation. There is a general trend of springtime water levels increasing with time, consistent with the increased precipitation over time in the area [14]. There are also seasonal declines during the irrigation season. The tendency of the water levels in the aquifer to be primarily influenced by climate and precipitation rather than well withdrawals indicates natural discharge is occurring, which the Water Management Board considers available for capture. Therefore, based on the record of observation wells, there is reasonable probability that unappropriated water is available for these applications.

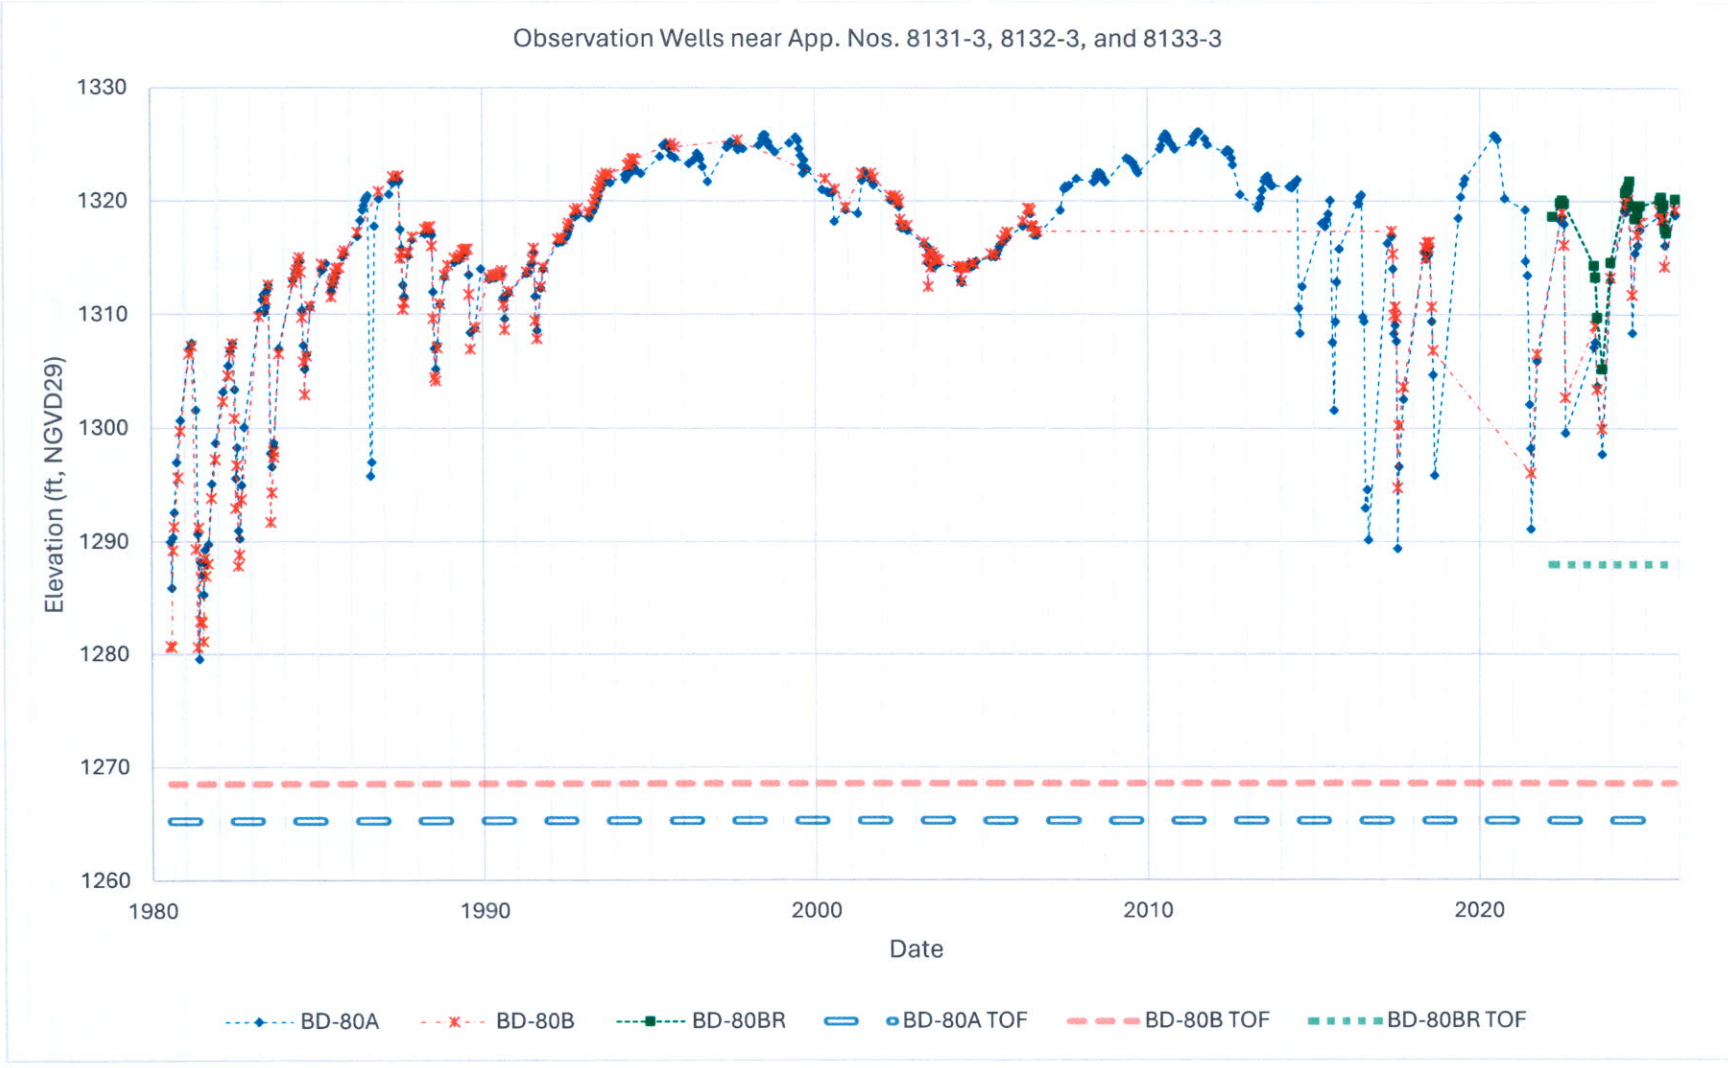

Figure 2: Observation water elevations near App. Nos. 8131-3, 8132-3, and 8133-3. TOF – Top of Formation [2]

Possibility of Unlawful Impairment of Existing Water Rights

The nearest domestic well to any of these applications on file with the Water Rights Program is approximately 0.4 miles south of App. No. 8132-3, based on the location reported by the well driller. The nearest water right permit to any of these applications is Water Right No. 5634-3, located approximately 0.4 miles north of App. No. 8133-3, 1.4 miles northeast of App. No. 8131-3, and 2.5 miles northeast of App. No. 8132-3 (Figure 1) [1]. The Water Rights Program has historically interpreted an unlawful impairment of existing water rights to occur if a junior water right/permit causes a nearby adequate well with a senior water right/permit to become unable to withdraw at the rate it is entitled to or, if a domestic well is impacted, a water right/permit causes an adequate domestic well to be unable to withdraw at the rate needed to supply reasonable domestic use of water. ARSD 74:02:04:20(6) defines an adequate well as:

> *...a well constructed or rehabilitated to allow various withdrawal methods to be used, to allow the inlet to the pump to be placed not less than 20 feet into the saturated aquifer or formation material when the well is constructed, or to allow the pump to be placed as near to the bottom of the aquifer as is practical if the aquifer thickness is less than 20 feet*

There are no complaints on file with the Water Rights Program involving possible well interference in the Tulare: Western Spink-Hitchcock aquifer in Beadle County despite the large number of wells in relatively close proximity throughout the Tulare: Western Spink Hitchcock aquifer [15]. Therefore, based on the lack of complaints, there is reasonable probability these applications can be developed without unlawful impairment of existing domestic wells or senior water rights.

Conclusions

1. Water Permit Application No. 8131-3 (Scott Hamilton) proposes to appropriate 2.00 cfs from up to two wells to be completed into the Tulare: Western Spink-Hitchcock aquifer in the approximate center of the SE ¼ Section 10 for irrigation of 290 acres in the E ½ Section 10; all in T113N-R65W. This application is priority of 6 out of 27 held in 2015.
2. Water Permit Application No. 8132-3 proposes to appropriate 2.00 cfs up to two wells to be completed into the Tulare: Western Spink-Hitchcock aquifer in the approximate center of the SW ¼ Section 15 for irrigation of 145 acres located in the SW ¼ Section 15; all in T113N-R65W. This application is priority of 27 out of 27 held in 2015.
3. Water Permit Application No. 8133-3 (Scott Hamilton) proposes to appropriate 2.00 cfs from up to two wells completed into the Tulare: Western Spink-Hitchcock aquifer in the aNE ¼ NE ¼ Section 11 for irrigation of 145 acres in the NE ¼ Section 11; all in T113N-R65W. This application is priority of 15 out of 27 held in 2015.
4. The Water Management Board determined in December of 2025 that based on the hydrologic budget and observation well analysis, there is reasonable probability unappropriated water is available for all these applications.
5. There is reasonable probability these applications can be developed without unlawful impairment of existing water rights.

Hitchcock SD 57348

Dear Mr. Hamilton:

Water Permit Application No. 8132-3 for irrigation use have been examined and found to comply with the South Dakota Water Laws and applicable rules. A notice has been sent to the Plainsman printed in Huron (Ph # 605 353-7418) and the American News printed in Aberdeen (see attachment for contact number). You will need to contact the newspapers and authorize publication of this notice. For your information, a copy of the notice, and recommendation of the Acting Chief Engineer are enclosed. Please review the notice prior to publication and notify this office, if you have any corrections or questions.

Be sure to contact the above newspapers to authorize publication of your Notice and to arrange for payment. Early contact with the papers can eliminate delays. Upon receiving authorization from you, the publishers have been instructed to publish your notice. The newspapers have also been instructed to send us the Proof of Publication. We must receive Proof of Publication before action can be taken on the application.

Sincerely,

Rachel Rodriguez

Rachel Rodriguez
Water Rights Program

enclosures

NOTE: If you plan to contest any part of the Acting Chief Engineer's recommendation, you must file a petition pursuant to the procedures outlined in the attached notice of hearing. The Water Management Board will then consider your concerns during a hearing on the application.

Instruction to Newspaper – Publish the Notice on March 25, 2026. The applicant is responsible for payment.

NOTICE OF HEARING on Application No. 8132-3 to Appropriate Water

Notice is given that Hamilton Family LLC., 37989 191st Street, Hitchcock SD 57348, has filed an application for a water permit to appropriate 2.0 cubic feet of water per second from up to two wells to be completed into the Tulare: Western Spink Hitchcock Aquifer (approximately 100 feet deep) located in the approximate center of the SW 1/4 Section 15 for irrigation of 145 acres located in the SW 1/4 Section 15; all in T113N-R65W. This site is located approximately eleven miles southwest of Hitchcock SD.

South Dakota Codified Law (SDCL) 46-2A-4(10) provides that "if the applicant does not contest the recommendation of the Acting Chief Engineer and no petition to oppose the application is received, the Acting Chief Engineer shall act on the application pursuant to the Acting Chief Engineer's recommendation and no hearing may be held before the board, unless the Acting Chief Engineer makes a finding that an application, even if uncontested, presents important issues of public policy or public interest that should be heard by the board." In this case, the Acting Chief Engineer finds that this application presents important issues of public interest that should be heard by the Water Management Board.

Pursuant to SDCL 46-2A-2, the Acting Chief Engineer recommends APPROVAL of Application No. 8132-3 with qualifications because 1) unappropriated water is available, 2) existing domestic water uses and water rights will not be unlawfully impaired, 3) it is a beneficial use of water, and 4) it is in the public interest as it pertains to matters within the regulatory authority of the Water Management Board. The Acting Chief Engineer's recommendation with qualifications, the application, and staff report are available at https://danr.sd.gov/public or contact Amanda Dewell for this information, or other information, at the Water Rights Program address provided below.

The Water Management Board will consider this application at 1:30 PM (Central Time) on May 6, 2026, in the Matthew Training Center, Joe Foss Bldg, 523 E. Capitol Ave., Pierre SD. The Acting Chief Engineer's recommendation is not final or binding upon the Board. The Board is authorized to 1) approve, 2) approve with qualifications, 3) defer, or 4) deny this application based on the facts presented at the public hearing.

Any person who intends to participate in the hearing shall allege that the application, upon approval, will cause injury to the person that is unique from any injury suffered by the public in general. The injury must concern a matter either within the regulatory authority found in SDCL 46-2A-9 for approval or denial of the application, or other matter concerning the application within the regulatory authority of the board to act upon as defined by SDCL 46-2-9 and 46-2-11, or both. Any person meeting the petitioner requirements and wishing to be a party of record in a contested case hearing shall file a written petition to oppose the application with BOTH the applicant and Acting Chief Engineer. A petition opposing the application shall be filed on a form provided by the Acting Chief Engineer. The petition form is available online at https://danr.sd.gov/public or by contacting the Acting Chief Engineer. The Acting Chief Engineer's address is "Water Rights Program, Foss Building, 523 E Capitol, Pierre SD 57501" or call (605) 773-3352. The applicant's mailing address is given above. If contesting the Acting Chief Engineer's recommendation, the applicant shall also file a petition. A petition filed by either an interested person or the applicant must be filed by April 7, 2026.

The petition shall be in writing and shall include a statement describing the unique injury upon approval of the application on the petitioner, the petitioner's reasons for opposing the application, and the name and mailing address of the petitioner or the petitioner's legal counsel, if legal counsel is obtained. The hearing is an adversary proceeding and any party has the right to be present at the hearing and to be represented by a lawyer. These and other due process rights will be forfeited if they are not exercised at the hearing and decisions of the Board may be appealed to the Circuit Court and State Supreme Court as provided by law.

The May hearing date will be automatically delayed for at least 20 days upon written request to the Acting Chief Engineer from the applicant or any person who has filed a petition to oppose the application. The request for an automatic delay must be filed by April 7, 2026. If an automatic delay is requested, the hearing will be rescheduled for a future Board meeting and personal notice will be provided to the applicant and all petitioners regarding the time, date, and location.

Any interested person may file a comment on the application with the Acting Chief Engineer. The comment shall be filed on a form provided by the Acting Chief Engineer and is available online at https://danr.sd.gov/public or by calling (605) 773-3352 or writing the Acting Chief Engineer at the address provided above. Filing a comment does not make the commenter a party of record or a participant in any hearing that may be held. Any comment must be filed by April 7, 2026.

Notice is given to individuals with disabilities that the meeting is being held in a physically accessible location. Individuals requiring assistive technology or other services in order to participate in the meeting or materials in an alternate format should contact Brian Walsh, Nondiscrimination Coordinator, by calling (605) 773-5559 or by email at Brian.Walsh@state.sd.us as soon as possible but no later than two business days prior to the meeting in order to ensure accommodations are available.

Under SDCL 1-26-17(7) notices must state that "if the amount in controversy exceeds $2,500.00 or if a property right may be terminated, any party to the contested case may require the agency to use the Office of Hearing Examiners by giving notice of the request to the agency no later than ten days after service of a notice of hearing issued pursuant to SDCL 1-26-17." This is a Notice of Hearing, service is being provided by publication, and the applicable date to give notice to the Acting Chief Engineer is April 7, 2026. However, since this particular matter is a water permit application and not a monetary controversy in excess of $2,500.00 or termination of a property right the Acting Chief Engineer disputes the applicability of this provision and maintains that the hearing must be conducted by the Board.

As applicable, the following provides the legal authority and jurisdiction under which the hearing will be held and the particular statutes and rules pertaining to this application: SDCL 1-26-16 thru 1-26-28; SDCL 46-1-1 thru 46-1-9, 46-1-13 thru 46-1-16; 46-2-3.1, 46-2-9, 46-2-11, 46-2-17; 46-2A-1 thru 46-2A-12, 46-2A-14, 46-2A-15, 46-2A-20, 46-2A-21, 46-2A-23; 46-5-1.1, 46-5-2 thru 46-5-26, 46-5-30.2 thru 46-5-30.4, 46-5-31, 46-5-32 thru 46-5-34.1, 46-5-38 thru 46-5-39, 46-5-46, 46-5-47, 46-5-49; 46-6-1 thru 46-6-3.1, 46-6-6.1, 46-6-10, 46-6-13, 46-6-14, 46-6-21, 46-6-26; and Board Rules ARSD 74:02:01:01 thru 74:02:01:25.02; 74:02:01:35.01.

Published once at an approximate cost of_____.

NOTICE OF HEARING on Application No. 8132-3 to Appropriate Water
Notice is given that Hamilton Family LLC., 37989 191st Street, Hitchcock SD 57348, has filed an application for a water permit to appropriate 2.0 cubic feet of water per second from up to two wells to be completed into the Tulare: Western Spink Hitchcock Aquifer (approximately 100 feet deep) located in the approximate center of the SW 1/4 Section 15 for irrigation of 145 acres located in the SW 1/4 Section 15; all in T113N-R65W. This site is located approximately eleven miles southwest of Hitchcock SD.
South Dakota Codified Law (SDCL) 46-2A-4(10) provides that "if the applicant does not contest the recommendation of the Acting Chief Engineer and no petition to oppose the application is received, the Acting Chief Engineer shall act on the application pursuant to the Acting Chief Engineer's recommendation and no hearing may be held before the board, unless the Acting Chief Engineer makes a finding that an application, even if uncontested, presents important issues of public policy or public interest that should be heard by the board." In this case, the Acting Chief Engineer finds that this application presents important issues of public interest that should be heard by the Water Management Board.
Pursuant to SDCL 46-2A-2, the Acting Chief Engineer recommends APPROVAL of Application No. 8132-3 with qualifications because 1) unappropriated water is available, 2) existing domestic water uses and water rights will not be unlawfully impaired, 3) it is a beneficial use of water, and 4) it is in the public interest as it pertains to matters within the regulatory authority of the Water Management Board. The Acting Chief Engineer's recommendation with qualifications, the application, and staff report are available at https://danr.sd.gov/public or contact Amanda Dewell for this information, or other information, at the Water Rights Program address provided below.
The Water Management Board will consider this application at 1:30 PM (Central Time) on May 6, 2026, in the Matthew Training Center, Joe Foss Bldg, 523 E. Capitol Ave., Pierre SD. The Acting Chief Engineer's recommendation is not final or binding upon the Board. The Board is authorized to 1) approve, 2) approve with qualifications, 3) defer, or 4) deny this application based on the facts presented at the public hearing.
Any person who intends to participate in the hearing shall allege that the application, upon approval, will cause injury to the person that is unique from any injury suffered by the public in general. The injury must concern a matter either within the regulatory authority found in SDCL 46-2A-9 for approval or denial of the application, or other matter concerning the application within the regulatory authority of the board to act upon as defined by SDCL 46-2-9 and 46-2-11, or both. Any person meeting the petitioner requirements and wishing to be a party of record in a contested case hearing shall file a written petition to oppose the application with BOTH the applicant and Acting Chief Engineer. A petition opposing the application shall be filed on a form provided by the Acting Chief Engineer. The petition form is available online at https://danr.sd.gov/public or by contacting the Acting Chief Engineer. The Acting Chief Engineer's address is "Water Rights Program, Foss Building, 523 E Capitol, Pierre SD 57501" or call (605) 773-3352. The applicant's mailing address is given above. If contesting the Acting Chief Engineer's recommendation, the applicant shall also file a petition. A petition filed by either an interested person or the applicant must be filed by April 7, 2026.
The petition shall be in writing and shall include a statement describing the unique injury upon approval of the application on the petitioner, the petitioner's reasons for opposing the application, and the name and mailing address of the petitioner or the petitioner's legal counsel, if legal counsel is obtained. The hearing is an adversary proceeding and any party has the right to be present at the hearing and to be represented by a lawyer. These and other due process rights will be forfeited if they are not exercised at the hearing and decisions of the Board may be appealed to the Circuit Court and State Supreme Court as provided by law.
The May hearing date will be automatically delayed for at least 20 days upon written request to the Acting Chief Engineer from the applicant or any person who has filed a petition to oppose the application. The request for an automatic delay must be filed by April 7, 2026. If an automatic delay is requested, the hearing will be rescheduled for a future Board meeting and personal notice will be provided to the applicant and all petitioners regarding the time, date, and location.
Any interested person may file a comment on the application with the Acting Chief

Engineer. The comment shall be filed on a form provided by the Acting Chief Engineer and is available online at https://danr.sd.gov/public or by calling (605) 773-3352 or writing the Acting Chief Engineer at the address provided above. Filing a comment does not make the commenter a party of record or a participant in any hearing that may be held. Any comment must be filed by April 7, 2026.

Notice is given to individuals with disabilities that the meeting is being held in a physically accessible location. Individuals requiring assistive technology or other services in order to participate in the meeting or materials in an alternate format should contact Brian Walsh, Nondiscrimination Coordinator, by calling (605) 773-5559 or by email at Brian.Walsh@state.sd.us as soon as possible but no later than two business days prior to the meeting in order to ensure accommodations are available.

Under SDCL 1-26-17(7) notices must state that "if the amount in controversy exceeds $2,500.00 or if a property right may be terminated, any party to the contested case may require the agency to use the Office of Hearing Examiners by giving notice of the request to the agency no later than ten days after service of a notice of hearing issued pursuant to SDCL 1-26-17." This is a Notice of Hearing, service is being provided by publication, and the applicable date to give notice to the Acting Chief Engineer is April 7, 2026. However, since this particular matter is a water permit application and not a monetary controversy in excess of $2,500.00 or termination of a property right the Acting Chief Engineer disputes the applicability of this provision and maintains that the hearing must be conducted by the Board.

As applicable, the following provides the legal authority and jurisdiction under which the hearing will be held and the particular statutes and rules pertaining to this application: SDCL 1-26-16 thru 1-26-28; SDCL 46-1-1 thru 46-1-9, 46-1-13 thru 46-1-16; 46-2-3.1, 46-2-9, 46-2-11, 46-2-17; 46-2A-1 thru 46-2A-12, 46-2A-14, 46-2A-15, 46-2A-20, 46-2A-21, 46-2A-23; 46-5-1.1, 46-5-2 thru 46-5-26, 46-5-30.2 thru 46-5-30.4, 46-5-31, 46-5-32 thru 46-5-34.1, 46-5-38 thru 46-5-39, 46-5-46, 46-5-47, 46-5-49; 46-6-1 thru 46-6-3.1, 46-6-6.1, 46-6-10, 46-6-13, 46-6-14, 46-6-21, 46-6-26; and Board Rules ARSD 74:02:01:01 thru 74:02:01:25.02; 74:02:01:35.01.

NOTICE OF HEARING on Application No. 8132-3 to Appropriate Water

Notice is given that Hamilton Family LLC., 37989 191st Street, Hitchcock SD 57348, has filed an application for a water permit to appropriate 2.0 cubic feet of water per second from up to two wells to be completed into the Tulare: Western Spink Hitchcock Aquifer (approximately 100 feet deep) located in the approximate center of the SW 1/4 Section 15 for irrigation of 145 acres located in the SW 1/4 Section 15; all in T113N-R65W. This site is located approximately eleven miles southwest of Hitchcock SD.

South Dakota Codified Law (SDCL) 46-2A-4(10) provides that "if the applicant does not contest the recommendation of the Acting Chief Engineer and no petition to oppose the application is received, the Acting Chief Engineer shall act on the application pursuant to the Acting Chief Engineer's recommendation and no hearing may be held before the board, unless the Acting Chief Engineer makes a finding that an application, even if uncontested, presents important issues of public policy or public interest that should be heard by the board." In this case, the Acting Chief Engineer finds that this application presents important issues of public interest that should be heard by the Water Management Board.

Pursuant to SDCL 46-2A-2, the Acting Chief Engineer recommends APPROVAL of Application No. 8132-3 with qualifications because 1) unappropriated water is available, 2) existing domestic water uses and water rights will not be unlawfully impaired, 3) it is a beneficial use of water, and 4) it is in the public interest as it pertains to matters within the regulatory authority of the Water Management Board. The Acting Chief Engineer's recommendation with qualifications, the application, and staff report are available at https://danr.sd.gov/public or contact Amanda Dewell for this information, or other information, at the Water Rights Program address provided below.

The Water Management Board will consider this application at 1:30 PM (Central Time) on May 6, 2026, in the Matthew Training Center, Joe Foss Bldg, 523 E. Capitol Ave., Pierre SD. The Acting Chief Engineer's recommendation is not final or binding upon the Board. The Board is authorized to 1) approve, 2) approve with qualifications, 3) defer, or 4) deny this application based on the facts presented at the public hearing.

Any person who intends to participate in the hearing

RECEIVED
APR 01 2026
OFFICE OF WATER

shall allege that the application, upon approval, will cause injury to the person that is unique from any injury suffered by the public in general. The injury must concern a matter either within the regulatory authority found in SDCL 46-2A-9 for approval or denial of the application, or other matter concerning the application within the regulatory authority of the board to act upon as defined by SDCL 46-2-9 and 46-2-11, or both. Any person meeting the petitioner requirements and wishing to be a party of record in a contested case hearing shall file a written petition to oppose the application with BOTH the applicant and Acting Chief Engineer. A petition opposing the application shall be filed on a form provided by the Acting Chief Engineer. The petition form is available online at https://danr.sd.gov/public or by contacting the Acting Chief Engineer. The Acting Chief Engineer's address is "Water Rights Program, Foss Building, 523 E Capitol, Pierre SD 57501" or call (605) 773-3352. The applicant's mailing address is given above. If contesting the Acting Chief Engineer's recommendation, the applicant shall also file a petition. A petition filed by either an interested person or the applicant must be filed by April 7, 2026.

The petition shall be in writing and shall include a statement describing the unique injury upon approval of the application on the petitioner, the petitioner's reasons for opposing the application, and the name and mailing address of the petitioner or the petitioner's legal counsel, if legal counsel is obtained. The hearing is an adversary proceeding and any party has the right to be present at the hearing and to be represented by a lawyer. These and other due process rights will be forfeited if they are not exercised at the hearing and decisions of the Board may be appealed to the Circuit Court and State Supreme Court as provided by law.

The May hearing date will be automatically delayed for at least 20 days upon written request to the Acting Chief Engineer from the applicant or any person who has filed a petition to oppose the application. The request for an automatic delay must be filed by April 7, 2026. If an automatic delay is requested, the hearing will be rescheduled for a future Board meeting and personal notice will be provided to the applicant and all petitioners regarding the time, date, and location.

Any interested person may file a comment on the application with the Acting Chief Engineer. The

OFFICE OF
WATER

comment shall be filed on a form provided by the Acting Chief Engineer and is available online at https://danr.sd.gov/public or by calling (605) 773-3352 or writing the Acting Chief Engineer at the address provided above. Filing a comment does not make the commenter a party of record or a participant in any hearing that may be held. Any comment must be filed by April 7, 2026.

Notice is given to individuals with disabilities that the meeting is being held in a physically accessible location. Individuals requiring assistive technology or other services in order to participate in the meeting or materials in an alternate format should contact Brian Walsh, Nondiscrimination Coordinator, by calling (605) 773-5559 or by email at Brian.Walsh@state.sd.us as soon as possible but no later than two business days prior to the meeting in order to ensure accommodations are available.

Under SDCL 1-26-17(7) notices must state that "if the amount in controversy exceeds $2,500.00 or if a property right may be terminated, any party to the contested case may require the agency to use the Office of Hearing Examiners by giving notice of the request to the agency no later than ten days after service of a notice of hearing issued pursuant to SDCL 1-26-17." This is a Notice of Hearing, service is being provided by publication, and the applicable date to give notice to the Acting Chief Engineer is April 7, 2026. However, since this particular matter is a water permit application and not a monetary controversy in excess of $2,500.00 or termination of a property right the Acting Chief Engineer disputes the applicability of this provision and maintains that the hearing must be conducted by the Board.

As applicable, the following provides the legal authority and jurisdiction under which the hearing will be held and the particular statutes and rules pertaining to this application: SDCL 1-26-16 thru 1-26-28; SDCL 46-1-1 thru 46-1-9, 46-1-13 thru 46-1-16; 46-2-3.1, 46-2-9, 46-2-11, 46-2-17; 46-2A-1 thru 46-2A-12, 46-2A-14, 46-2A-15, 46-2A-20, 46-2A-21, 46-2A-23; 46-5-1.1, 46-5-2 thru 46-5-26, 46-5-30.2 thru 46-5-30.4, 46-5-31, 46-5-32 thru 46-5-34.1, 46-5-38 thru 46-5-39, 46-5-46, 46-5-47, 46-5-49; 46-6-1 thru 46-6-3.1, 46-6-6.1, 46-6-10, 46-6-13, 46-6-14, 46-6-21, 46-6-26; and Board Rules ARSD 74:02:01:01 thru 74:02:01:25.02; 74:02:01:35.01.

Good morning,

Attached is a copy of the acting chief engineer's recommendation, and information regarding the public notice for your water permit applications. As stated in the letters, please contact the paper(s) as soon as possible to authorize publication and arrange for payment. This information is also being mailed to you today.

Let me know if you have questions. Please confirm receipt of this email.

Thank you,

Rachel Rodriguez

NOTICE OF TRANSFER OF OWNERSHIP

For assistance call (605) 773-3352

Mail to: SD DANR, Water Rights Program
523 E Capitol Ave
Pierre, SD 57501-3182

Water Right/Permit No. 8132-3

Date: 3/23/26

I/We request that Water Right/Permit No. 8132-3 formerly owned by:

Hamilton Family LLC be transferred to:

New Owner Name: Scott Hamilton

Address: 37989 191st St mobile: 605-350-1323

City, State, Zip Hitchcock, SD 57348 email: hamilton@venturecomm.net

Title to the following described land(s)/property has been transferred as described above:

SW¼ Sec 15 - T113N - R65W

RECEIVED
MAR 26 2026
OFFICE OF WATER

☒ I understand that the validity of Water Right/Permit No. 8132-3 has not been determined by this transfer action. If I have any questions on validity, I understand that only the Water Management Board has the authority to determine if a water right/permit is valid (see note below).

You are requested to file this "Notice of Transfer" in the appropriate file with the Water Rights Program, as evidence of the change of ownership.

A fee of Fifty Dollars ($50.00) is included to cover the filing fee as required by SDCL 46-2-13.

I, Scott Hamilton, the new owner, certify that the above information is true and correct.

Scott Hamilton
(signed by new owner)

NOTE: Water permits may be cancelled for nonconstruction after the five-year construction period has expired. Once a water permit is developed, an inspection is conducted to issue a water right license for the project as developed. A water permit/right may be cancelled for one or more of the following reasons:

1. Abandonment - no intent to use water and use is abandoned.
2. Forfeiture - no use of water for three-year period without legal excuse.
3. For a third violation of a condition of a water permit/right.

Scott Hamilton
37989 191st Street
Hitchcock SD 57348

Dear Mr. Hamilton:

Enclosed are Water Permit Nos. 8131-3 and 8132-3 authorizing construction of your water diversion systems and beneficial use of the water, not exceeding the limits as specified in the Water Permits.

Form 10's, *Notice of Completion of Works and Application of Water to Beneficial Use*, are enclosed. Please return the completed forms after you have finished the systems and have put the water to beneficial use. An investigation can then be scheduled so the water licenses may be issued, thus completing the acquisition of a water right.

An informational sheet *? Common Water Right Questions?* is also enclosed. This sheet is intended to answer some of the questions associated with obtaining and keeping a water right.

Water Permit 8132-3 Hamilton Family LLC was transferred to Scott Hamilton on May 20, 2026, a copy of the receipt is enclosed for your records.

Sincerely,

Adam Mathiowetz, PE
