**SOUTH DAKOTA
WATER PERMIT NO. 8489-3**

Date of first receipt of application February 16, 2021.

The Chief Engineer, on behalf of the Water Management Board, issues Water Permit No. 8489-3 to Blake Allard, 47834 330th St, Jefferson SD 57038 authorizing the construction of the water use system and the placing of water to beneficial use subject to the following limitations, conditions and qualifications:

1. Water Permit No. 8489-3 appropriates 1.78 cubic feet of water per second (cfs) from one well to be completed into the Missouri:Elk Point Aquifer (approximately 140 feet deep) located near the center of the SW 1/4 Section 16 for irrigation of 120 acres located in the SW 1/4 Section 16; all in T90N-R49W. This site is located approximately 4 miles west of Jefferson SD.
2. The amount of the appropriation may not exceed 2 acre feet annually for each acre of land to which water is actually and beneficially applied for irrigation. The water is to be used during the following described annual period: April 1 – September 30.
3. The date from which applicant may claim right is February 16, 2021.
4. The date of approval of Permit No. 8489-3 is April 26, 2021.
5. One-fifth of the construction is to be completed on or before October 26, 2023.
6. All construction is to be completed on or before April 26, 2026.
7. Water is to be put to beneficial use on or before April 26, 2030.
8. Water rights obtained in compliance with the laws of the State of South Dakota may not be unlawfully impaired by this appropriation.

QUALIFICATIONS

1. The well approved under Water Permit No. 8489-3 will be located near domestic wells and other wells which may obtain water from the same aquifer. The well owner under this Permit shall control his withdrawals so there is not a reduction of needed water supplies in adequate domestic wells or in adequate wells having prior water rights.
2. The well authorized by Permit No. 8489-3 shall be constructed by a licensed well driller and construction of the well and installation of the pump shall comply with Water Management Board Well Construction Rules, Chapter 74:02:04 with the well casing pressure grouted (bottom to top) pursuant to Section 74:02:04:28.
3. Pursuant to SDCL 46-5-6 which allows a greater diversion rate if the method of irrigation, time constraints, or type of soils so requires, Permit No. 8489-3 authorizes a maximum diversion rate of 1.78 cfs for the irrigation of 120 acres with an annual volume not to exceed 2 acre feet of water per acre per year.
4. This Permit is approved subject to the irrigation water use questionnaire being submitted each year.

**RECOMMENDATION OF CHIEF ENGINEER FOR WATER PERMIT
APPLICATION NO. 8489-3, Blake Allard**

Pursuant to SDCL 46-2A-2, the following is the recommendation of the Chief Engineer, Water Rights Program, Department of Environment and Natural Resources concerning Water Permit Application No. 8489-3, Blake Allard, 47834 330th St, Jefferson SD 57038.

The Chief Engineer is recommending APPROVAL of Application No. 8489-3 because 1) there is reasonable probability that there is unappropriated water available for the applicant's proposed use, 2) the proposed diversion can be developed without unlawful impairment of existing rights, 3) the proposed use is a beneficial use and 4) it is in the public interest with the following qualifications:

1. The well approved under Water Permit No. 8489-3 will be located near domestic wells and other wells which may obtain water from the same aquifer. The well owner under this Permit shall control his withdrawals so there is not a reduction of needed water supplies in adequate domestic wells or in adequate wells having prior water rights.
2. The well authorized by Permit No. 8489-3 shall be constructed by a licensed well driller and construction of the well and installation of the pump shall comply with Water Management Board Well Construction Rules, Chapter 74:02:04 with the well casing pressure grouted (bottom to top) pursuant to Section 74:02:04:28.
3. Pursuant to SDCL 46-5-6 which allows a greater diversion rate if the method of irrigation, time constraints, or type of soils so requires, Permit No. 8489-3 authorizes a maximum diversion rate of 1.78 cfs for the irrigation of 120 acres with an annual volume not to exceed 2 acre feet of water per acre per year.
4. This Permit is approved subject to the irrigation water use questionnaire being submitted each year.

See report on application for additional information.

Eric Gronlund, Chief Engineer
April 6, 2021

**REPORT TO THE CHIEF ENGINEER
WATER PERMIT APPLICATION NO. 8489-3
BLAKE ALLARD
APRIL 6, 2021**

Water Permit Application No. 8489-3 proposes to appropriate water at a maximum instantaneous diversion rate of 1.78 cubic feet per second (cfs) from the Missouri: Elk Point aquifer. The applicant intends to divert water from a single, approximately 140 feet-deep, well to be located near the center of the SW ¼ Section 16 for irrigation of 120 acres located in the SW ¼ Section 16; all in T90N-R49W. The site is located approximately 4.0 miles west of Jefferson, SD. The applicant is requesting a diversion rate greater than the statutory limit of 1 cfs per 70 acres.

AQUIFER: Missouri: Elk Point (M: EP)

Aquifer Characteristics

The Missouri: Elk Point aquifer is a deposit of glacial outwash composed of fine sand to very coarse gravel (Niehus, 1994). It underlies approximately 219,100 acres of Yankton, Clay, and Union counties (Figure 1) with an estimated 3,287,100 million acre-feet of recoverable water in storage (Hedges et al., 1982). It is hydraulically connected to the Lower Vermillion Missouri and Lower James Missouri aquifers, and the Missouri, Vermillion, and Big Sioux Rivers (Niehus, 1994; Stephens, 1967). Both confined and unconfined groundwater conditions are present in the aquifer (Niehus, 1994; Stephens, 1967). The movement of groundwater within the aquifer is generally from the northwest to the southeast, and towards the Missouri River (Stephens, 1967). Existing water well completion reports in the vicinity of the proposed application show an average of 59 feet of silty, sandy clay overlying water bearing sand with gravel with an average depth to the groundwater surface of 19 feet. (Water Rights, 2021a). This indicates confined conditions with an average of 40 feet of artesian head pressure. It should be noted the Missouri: Elk Point is typically found under unconfined conditions and is generally only locally confined. The aquifer is under unconfined conditions within approximately ½ mile to the southwest of the proposed well site (Water Rights, 2021b).

SOUTH DAKOTA CODIFIED LAW (SDCL) 46-2A-9

Pursuant to SDCL 46-2A-9, a permit to appropriate water may be issued only if there is reasonable probability that there is unappropriated water available for the applicant's proposed use, that the proposed diversion can be developed without unlawful impairment of existing rights, and that the proposed use is a beneficial use and in the public interest. This report will address water availability and potential for unlawful impairment of existing water rights within the Missouri: Elk Point aquifer.

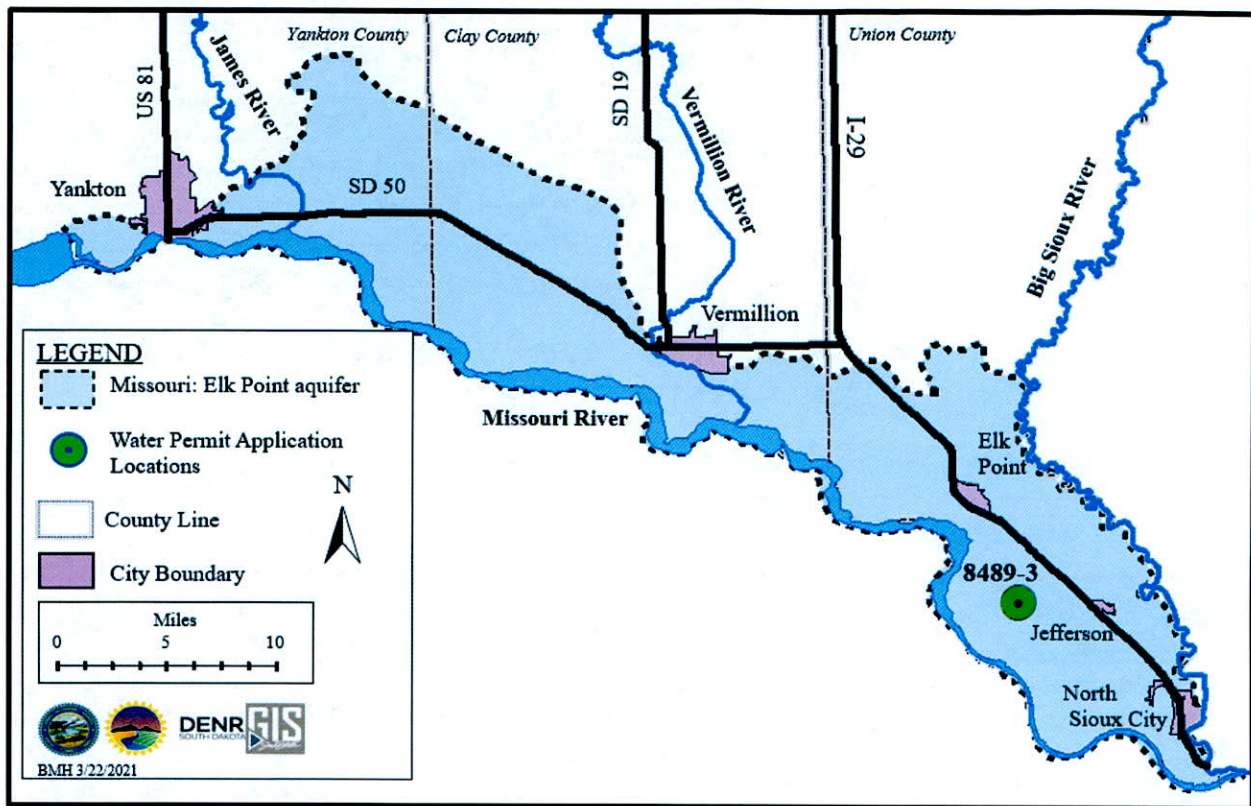

Figure 1. Water Permit Application No. 8489-3 shown within the Missouri: Elk Point aquifer boundary (modified from: Hedges et al., 1982).

WATER AVAILABILITY

Water Permit Application No. 8489-3 proposes to appropriate water from the Missouri: Elk Point aquifer. The probability of unappropriated water being available from an aquifer can be evaluated by considering SDCL 46-6-3.1 which requires "No application to appropriate groundwater may be approved if, according to the best information reasonably available, it is probable that the quantity of water withdrawn annually from a groundwater source will exceed the quantity of the average estimated annual recharge of water to the groundwater source..." If the source of the water is older or lower than the Greenhorn Formation and a water distribution system has applied for a permit, the Board need not consider the balance of recharge to and withdrawal from the aquifer. For this application, a water distribution system is not involved and the aquifer is not older or lower than the Greenhorn Formation; therefore, the balance of recharge and withdrawal must be considered.

Hydrologic Budget

Recharge:

The Missouri: Elk Point aquifer is recharged by infiltration of precipitation where the aquifer is at or near the land surface, inflow from the Lower Vermillion-Missouri and Dakota aquifers, and seepage from the Missouri, Vermillion, James, and Big Sioux Rivers (Bugliosi, 1983; Niehus, 1994). Recharge to the aquifer was estimated by Hedges et al. (1985) to be approximately 3.8 inches per year. With the areal extent of the aquifer estimated at 219,100 acres, the annual recharge rate can be estimated at 69,382 acre-feet/year (ac-ft/yr). Stephens (1967) noted that pumping of the aquifer will induce recharge from the Missouri River. Stonesifer (2013) estimated that the

Missouri River contributed 22,582 ac-ft/yr of recharge due to the pumping operation of the Lewis and Clark Rural Water System (RWS). This estimate is based off inducing at least 50% recharge of the water pumped currently and at full development of the existing and future use permits held by Lewis & Clark RWS. Depending on location and diversion rate, this percentage of induced recharge is likely to be much greater than 50% (Mathiowetz, 2020). This results in a total estimated annual recharge of approximately 92,000 ac-ft/yr for the Missouri: Elk Point aquifer with the recognition that as Lewis & Clark RWS further develops, they will likely induce more recharge. There are other wells, both domestic and appropriative, in close vicinity of the Missouri River that can induce recharge from the river, but that amount of induced recharge has not been estimated.

Discharge:

Discharge from the Missouri: Elk Point aquifer occurs through evapotranspiration in areas where the aquifer is near land surface, well withdrawals, leakage to the underlying Dakota aquifer and outflow to the Missouri and Big Sioux Rivers (Bugliosi, 1983; Niehus, 1994). Currently, there are a total of 621 water rights/permits (39 non-irrigation, 577 irrigation, and 5 future use) appropriating water from the Missouri: Elk point aquifer (Water Rights, 2021a). A summary of the non-irrigation water rights/permits are listed in Table 1. The total estimated volume of water to be withdrawn can be determined by assuming that water rights/permits limited by an annual volume will pump the entire volume appropriated annually or that water rights/permits limited by diversion rate will pump at the maximum permitted diversion rate 60 percent of the time.

Table 1. Non-irrigation water rights/permits from the Missouri: Elk Point aquifer with permitted appropriation and estimated volume water use (Water Rights, 2021a).

Use ^a	Number of Water Rights/Permits	Appropriation limited by Annual Volume (ac-ft/yr)	Appropriation limited by Diversion Rate (cfs)	Total Estimated Volume (ac-ft/yr)
COM	12	227.0	1.540	895.98
DOM	2		2.780	1,207.63
FWP	4		7.650	3,323.16
IND	5		0.878	381.40
MUN	11	10,686.0	8.330	14,304.55
REC	1	393.3		393.30
RWS	2	32,165.0		32,165.00
SHD	2		0.199	86.45
Total	39	43,471.3	21.377	52,757.46
a - COM: Commercial; DOM: Domestic; FWP: Fish and Wildlife Propagation; IND: Industrial; MUN: Municipal; REC: Recreational; SHD: Suburban Housing Development				

The total estimated volume of 52,757 ac-ft/yr can be modified after consideration of the thirteen non-irrigation permits that are required to report their annual usage from the Missouri: Elk Point aquifer. The estimated annual volume for nine of these permits are accounted for in Table 1. Five commercial use permits (8031-3, 8381-3, 8403-3, 8415-3, and 8435-3) are currently under development and are authorized a combined (2.69 cfs) 1,169 ac-ft/yr, assuming a 60 percent pumping rate. Permit No. 8147-3, a commercial use permit, limited by an annual volume of 160 ac-ft/yr. Lewis and Clark RWS appropriates 32,165 ac-ft/yr from permits 6736-3 (20,165 ac-ft/yr) and 7207-3 (12,000 ac-ft/yr). Even though the average reported pumping rate is 12,678 ac-ft/yr, this system is continually undergoing development, as a result, their full authorized appropriation is included in Table 1. The City of Yankton is limited by an annual volume of 6,050 ac-ft/yr of water under municipal use Permit No. 8212-3. The Clay RWS maintains Permit No. 5998A-3

which is also required to report its total annual use and does so as a non-irrigation permit due to its irrigation system uniqueness, serving several homes in a housing development (Water Rights, 2021a). The annual appropriation for this permit is accounted for with the turf permits in Table 4.

Table 2 contains the non-irrigation permits required to report annual pumpage and the applicable adjustment to the total estimated volume. Permit No. 7388-3 (2.0 cfs) is a domestic use permit held by the Clay RWS authorized to withdraw an estimated total of 869 ac-ft/yr, assuming a 60 percent pumping rate. However, an average value of 314 ac-ft/yr, reported pumping between 2012-2019, is considered most reflective of the infrastructure currently in place. Therefore, the difference of 555 ac-ft/yr will adjust the total estimated volume for domestic use. The City of Vermillion has 2 permits (Permit No. 147-3 appropriating 1,156 ac-ft/yr, assuming a 60 percent pumping rate, and Permit No. 6236-3 limited annually to 1,161 ac-ft/yr) authorized to appropriate a combined 2,317 ac-ft/yr. However, with an average value of 1,192 ac-ft/yr reported from 2006-2019, the difference 1,125 ac-ft/yr will adjust the total estimated volume for municipal permits. An adjusted total estimated volume of 51,081 ac-ft/yr will be included in the water balance for non-irrigation permits.

Table 2. Adjustment to Total Estimated Volume based on Non-irrigation pumpage reports for the Missouri: Elk Point aquifer (Water Rights, 1979-2019a, 2021a).

Average:	361.2	141,456.0	18,857.75

Well withdrawals from the Missouri: Elk Point aquifer are primarily for irrigation use. Table 3 shows the historic irrigation water use from the aquifer as reported to the DENR-Water Rights Program through annual irrigation questionnaires. The average annual reported pumping is 18,857.75 ac-ft/yr (Water Rights, 1979-2019b). However, this is not reflective of the increased pumpage from recent development. Stonesifer (2013) and Farmer (2018a) developed a method to estimate the average annual use from irrigation that accounts for an increasing issuance of water rights/permits and applies the correct allowance for appropriation per permitted acre when it was reduced, in 1978, from 3 ac-ft to 2 ac-ft. Farmer (2018a) determined that an average application rate of 0.35 feet per permitted acre (ft/ac) can be utilized to estimate annual use for irrigation.

Currently, there are 577 water rights/permits for irrigation with 75,520.5 total permitted acres for irrigation (Water Rights, 2021a). Farmer (2018b) further refined estimating average annual use by considering the different application rates between turf and crop irrigation. Turf irrigation should be determined separately because they tend to utilize their full authorized allowance for appropriation. Table 4 shows the permits that are considered turf irrigation with the appropriation amount determined from the permitted acres, multiplied by either 2 or 3 ac-ft as specifically allowed for each permit. A value of 1,877.7 ac-ft/yr will be included in the total volume estimate for turf irrigation. Subsequently, the calculation for estimated annual use requires adjustment because the acres for turf irrigation need to be removed from the total permitted acres. Subtracting the turf irrigation acres (Table 4) from the total permitted acres yields a value of 74,782.9 acres for crop irrigation. Applying the 0.35 ft/ac application rate to the acres for crop irrigation yields approximately 26,174 ac-ft/yr. Summing turf and crop irrigation estimates yields a value of 28,051 ac-ft/yr to be included in the water balance section for irrigation permits.

Table 4. Water rights/permits for irrigation on turf (Water Rights, 2021a).

Permit Number	Name	Acres	Appropriation (ac-ft)
1294-3	Recreation Development Association, Inc.	102.0	306.0
2011-3	Two Rivers Golf Club	95.0	285.0

Total:		737.6	1,877.7

There are five Future Use permits appropriating water from the Missouri: Elk Point aquifer. The full permitted volume authorized from the permits is utilized when estimating the annual volume usage. The future use areas are all in Clay County and composed of 13,000 ac-ft reserved by Lewis and Clark Rural Water System and 1,900 ac-ft reserved by the City of Vermillion. This is a total of 14,900 ac-ft/yr of water reserved for these permits and will be included in the water balance section for future use.

There are numerous domestic wells on file with the Water Rights Program within the Missouri: Elk Point aquifer (Water Rights 2021b). Domestic users are not required to report their annual water usage and their low diversion rates are not considered a significant portion of the hydrologic budget. Additionally, some domestic well may no longer be in use after the development of rural water systems in the area.

There are four pending applications for the Missouri: Elk Point aquifer, Water Permit Application Nos. 8463-3, 8474-3, 8475-3, and 8476-3, proposing to irrigate of 408.2 acres. Utilizing the average application rate of 0.35 feet per permitted acre (Farmer, 2018a), approximately 143 ac-ft/yr will be included in the water balance for the pending application.

Water Balance:

The Missouri: Elk Point aquifer estimated average annual withdrawal rate is 94,175 ac-ft/yr (non-irrigation: 51,081; irrigation: 28,051; future use: 14,900; pending: 143). Estimated average annual recharge is 92,000 ac-ft/yr. The expected use of 42 ac-ft/yr (irrigating 120 acres at the 0.35 in/ac application rate) by this application results in an exceedance of 2,217 ac-ft/yr in average annual withdrawal compared to recharge for this aquifer. However, the amount of induced recharge is likely much greater than currently estimated because the amount of recharge induced by non-Lewis & Clark RWS wells has not been estimated (Mathiowetz, 2020). Moreover, the wells for the Lewis and Clark RWS induce at least 50% of their recharge from the Missouri River and any additional induced recharge by other users has not been estimated. Therefore, there is a reasonable probability additional induced recharge potential exists in this aquifer to meet the estimated exceedance shown in the hydrologic budget plus the withdrawal proposed by this application.

Observation Well Data

Administrative Rule of South Dakota Section 74:02:05:07 requires that the Water Management Board rely upon the record of observation well measurements in addition to other data to determine that the quantity of water withdrawn annually from the aquifer does not exceed the estimated average annual recharge of the aquifer.

The DENR-Water Rights Program monitors 33 observation wells completed into the Missouri: Elk Point aquifer (Water Rights, 2021c). The hydrographs for observation wells within four miles of Water Permit Application No. 8489-3 are shown in Figures 2 through 5.

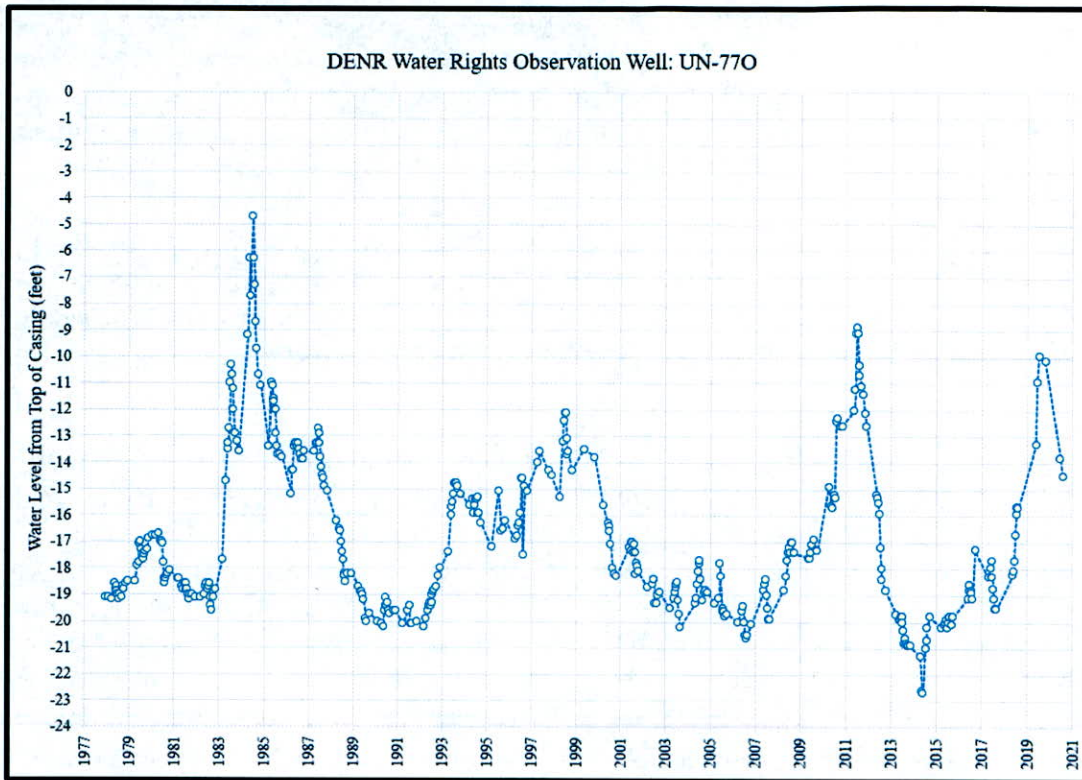

Figure 2. Hydrograph for observation well UN-77O located approximately 3.6 miles north of the proposed well location for Water Permit Application No. 8489-3 (Water Rights, 2021c).

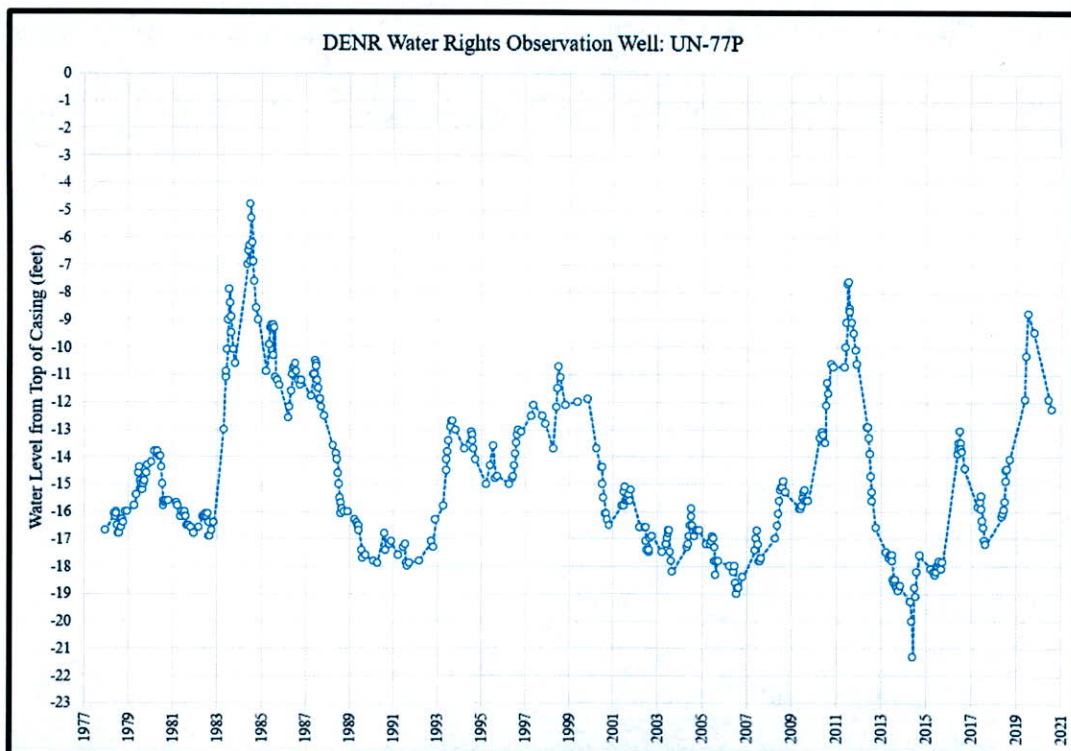

Figure 3. Hydrograph for observation well UN-77P located approximately 2.9 miles southeast of the proposed well location for Water Permit Application No. 8489-3 (Water Rights, 2021c).

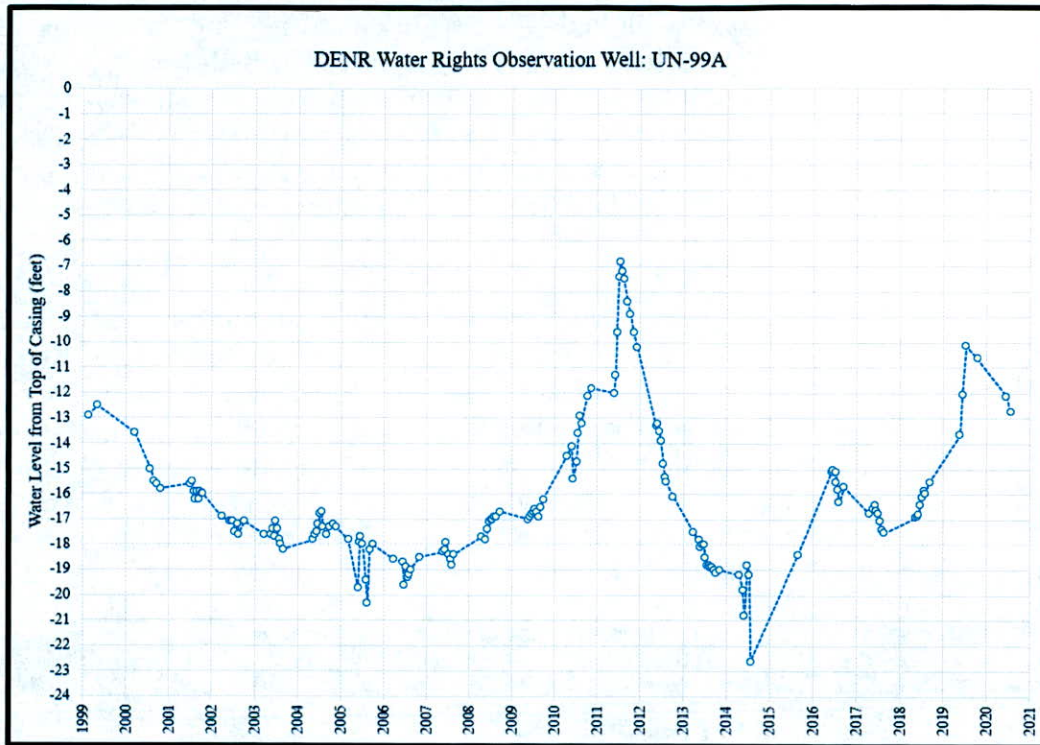

Figure 4. Hydrograph for observation well UN-99A located approximately 1.7 miles south of the proposed well location for Water Permit Application No. 8489-3 (Water Rights, 2021c).

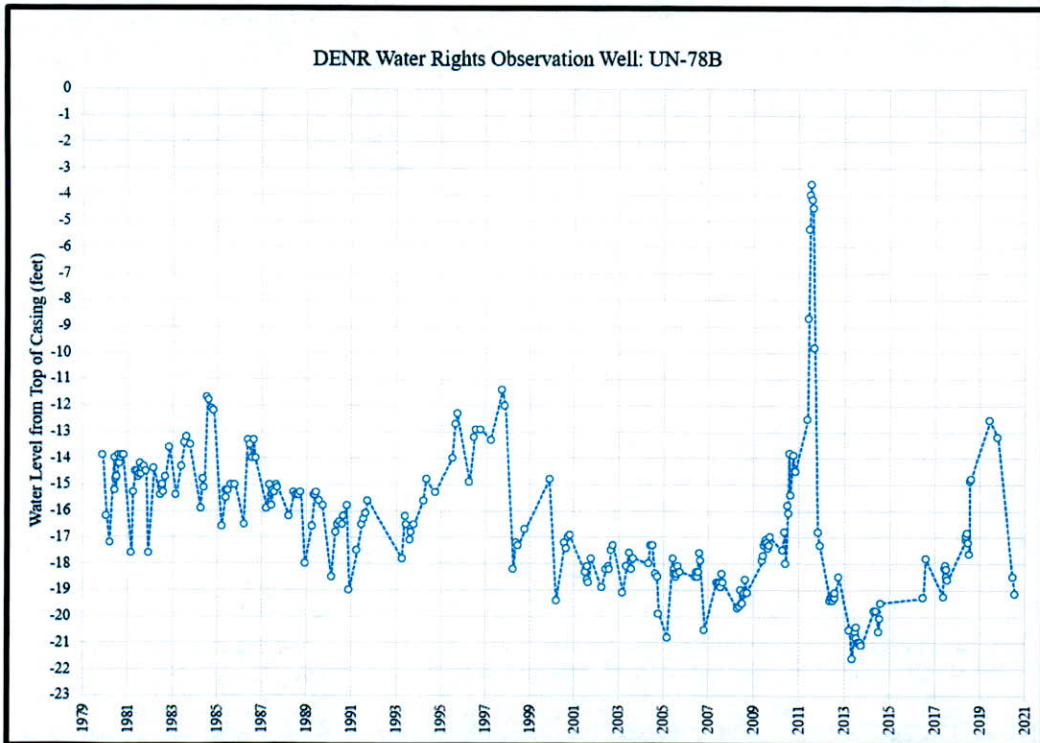

Figure 5. Hydrograph for observation well UN-78B located approximately 3.1 miles west of the proposed well location for Water Permit Application No. 8489-3 (Water Rights, 2021c).

The hydrographs shown in Figures 2 through 4 are representative of the hydrographs for other observation wells completed in the Missouri: Elk Point aquifer. The hydrographs show the water level of the aquifer is relatively stable over the period of record. They indicate that the aquifer responds well to climatic conditions with rising water levels during wet periods and declining water levels during drier periods. They also demonstrate that any drawdowns from pumping are temporary because the water levels typically recover to pre-pumping levels after the irrigation season.

A few Missouri: Elk Point aquifer observation well hydrographs, such as the one shown in Figure 5, show a gradual downward trend. These wells are located next to the Missouri River and the downward trend is due to entrenchment of the Missouri River, below Gavins Point Dam in Yankton, SD, lowering the water surface elevation of the river (Goodman, 2007). This results in a lowering of water levels in the hydraulically connected aquifer as the water level in the aquifer equilibrates to the lower average water surface elevation of the river. Therefore, downward trends are likely caused by the entrenchment of the Missouri River and not from over-appropriation of the Missouri: Elk Point aquifer (Mathiowetz, 2020).

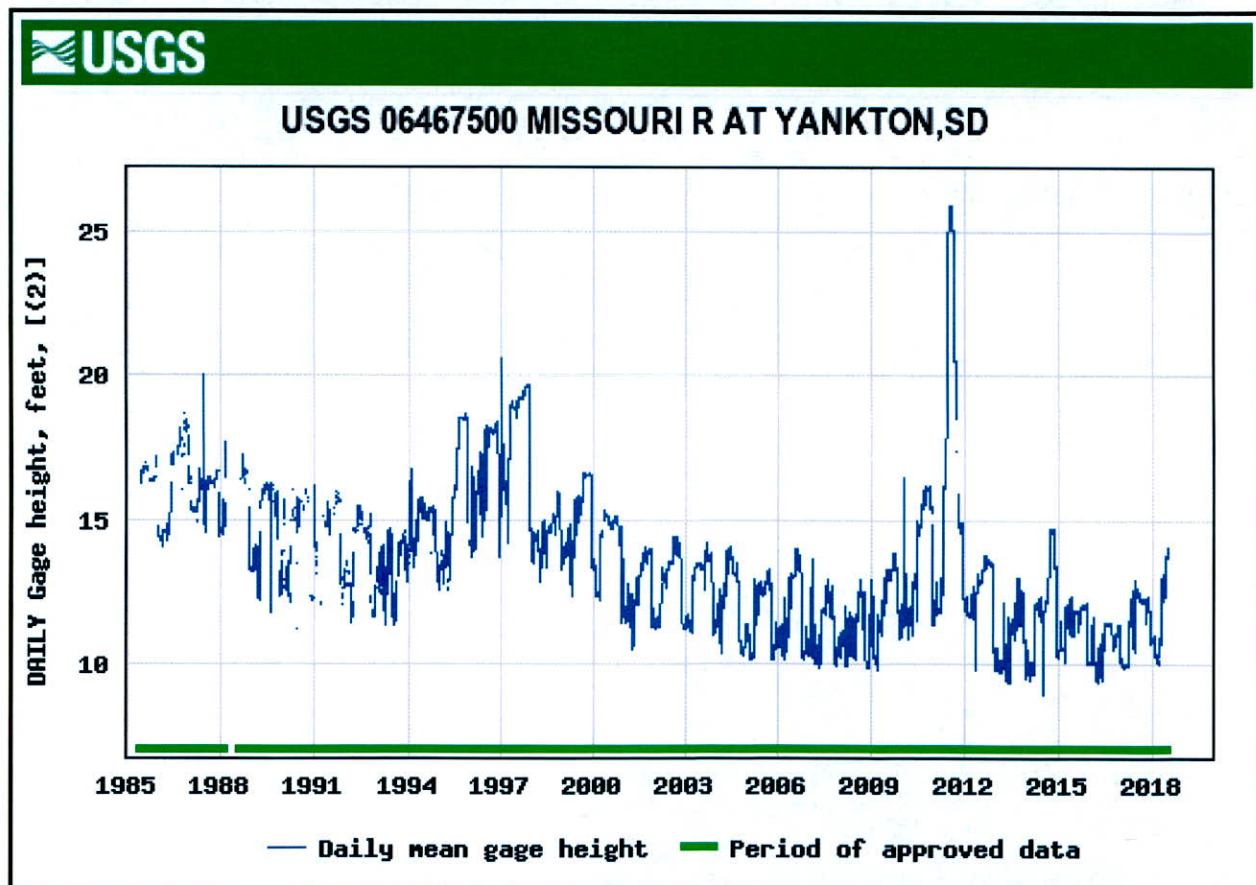

Figure 6. Hydrograph for USGS Stream Gage 06467500 Missouri River at Yankton, SD (USGS, 2021).

The U.S. Geological Survey (USGS) operates stream flow gaging station No. 06467500, on the Missouri River at Yankton, SD. Comparing the hydrograph for this gage (Figure 6) to the observation well hydrographs of the Missouri: Elk Point aquifer (Figures 2 - 5), show both the river and the aquifer react to climatic conditions by rising and falling in a similar fashion.

Furthermore, during flood events, as particularly shown in 2011, the water level in the aquifer, especially closer to the Missouri River, rises very quickly beyond what is typically seen for glacial outwash aquifers. This indicates there is hydraulic connection between the aquifer and the river. This means that when the elevation of the water in the river is greater than the aquifer, the river recharges the aquifer. Conversely, when the elevation of the water is higher in the aquifer, the aquifer naturally discharges to the river. As-a-result, as long as there is water in the river, there will be water in the aquifer and there is a reasonable probability unappropriated water is available for this proposed appropriation.

POTENTIAL FOR UNLAWFUL IMPAIRMENT OF EXISTING WATER RIGHTS

Currently, there are a total of 621 water rights/permits appropriating or reserving water from the Missouri: Elk Point aquifer (Water Rights, 2021a). Table 5 lists the water rights/permits shown in Figure 7 within 3 miles of the proposed well locations for Application No. 8489-3.

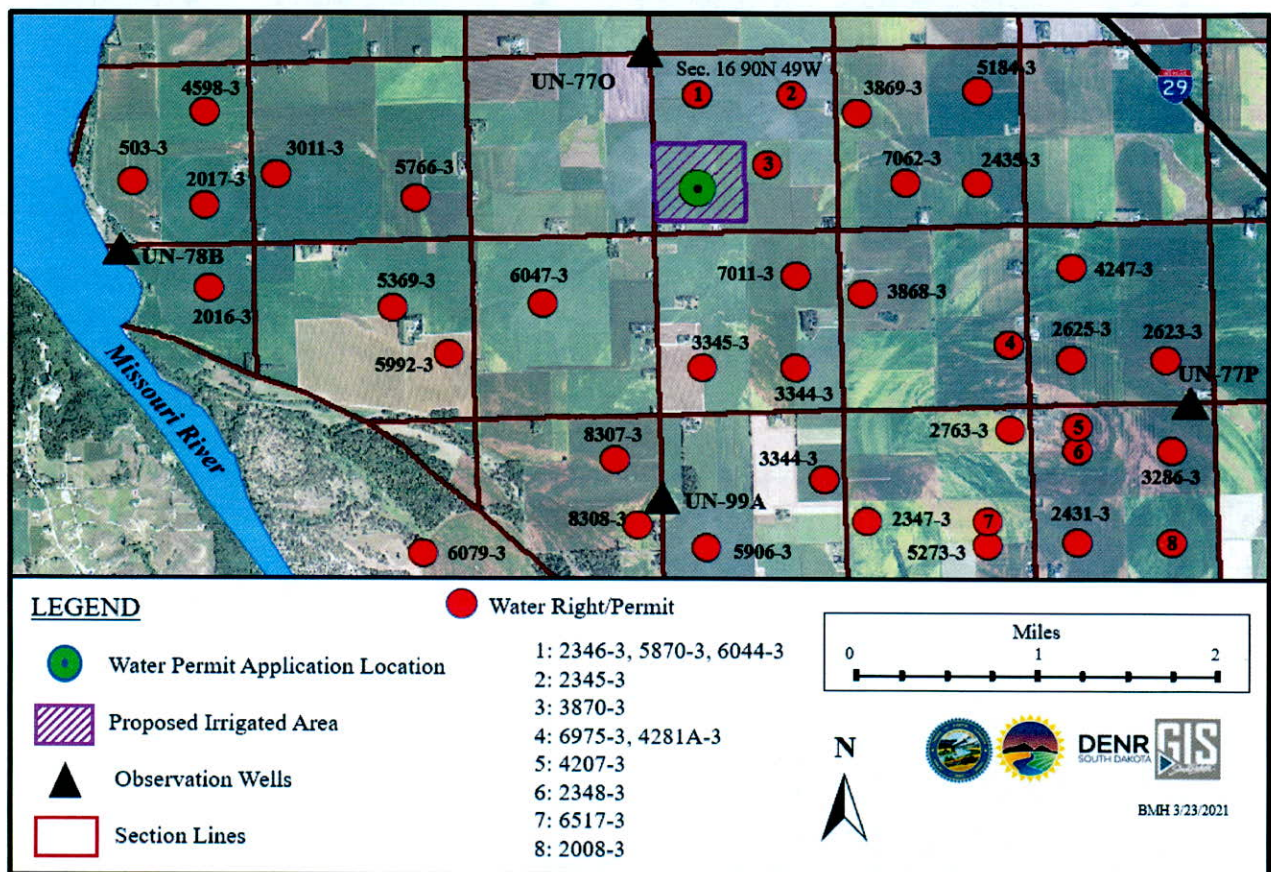

Figure 7. Existing Missouri: Elk Point aquifer water rights/permits and observation wells in the vicinity of Water Permit Application No. 8489-3 (modified from Hedges, et al., 1982; Water Rights 2021a & 2021c).

There are numerous domestic wells on file with the Water Rights Program within the vicinity of the proposed well site (Water Rights 2021b). Users in the vicinity of the proposed application are likely using water provided by a rural water system. Nevertheless, when considering the large amount of artesian head pressure (40 feet average) and saturated thickness of the aquifer in this area, domestic users with adequate wells are not anticipated to be adversely impacted by the pumping proposed for this application. Even though there are high capacity wells in the Missouri:

Elk Point aquifer, there has not been a history of well interference complaints due to pumping (Water Rights, 2021d).

a - IRR: Irrigation; LC: Licensed Water Right; PE: Permitted Water Right

To protect domestic well users, the Water Management Board defined an “adversely impacted domestic well” in ARSD 74:02:04:20(7) as:

“a well in which the pump intake was set at least 20 feet below the top of the aquifer at the time of construction or, if the aquifer is less than 20 feet thick, is as near to the bottom of the aquifer as is practical and the water level of the aquifer has declined to a level that the pump will no longer deliver sufficient water for the well owner’s needs.”

The Water Management Board considered the delivery of water by artesian head pressure versus maximum beneficial use during the issuance of Water Right No. 2313-2 for Coca-Cola Bottling Company of the Black Hills. The Board adopted Findings of Facts and Conclusions of Law that noted the reservation of artesian head pressure for delivery of water is inconsistent with SDCL 46-1-4 which states, “general welfare requires that the water resources of the state be put to beneficial use to the fullest extent of which they are capable...” (Water Rights, 1995). Furthermore, the Water Management Board found if increased cost or decreased production as a result of impacts on artesian head pressure by legitimate users is considered as an unlawful impairment, it conflicts with SDCL 46-1-4 (Water Rights, 1995). Consequently, some existing well owners may need to lower their pumps due to deeper water levels depending on the specific characteristics of the Missouri: Elk Point aquifer at their location; particularly since the aquifer is under confined conditions near the proposed diversion point for this application. Nearby adequate wells are not expected to be adversely impacted as defined in ARSD 74:02:04:20(7). As mentioned previously, the Missouri: Elk Point is typically found under unconfined conditions and is generally only locally confined. Unconfined conditions exists within approximately ½ mile to the southwest of the proposed well site (Water Rights, 2021b). In an unconfined aquifer, drawdown from pumping is generally not significant far from the well. Therefore, unconfined conditions near the proposed well site would minimize potential well interference from drawdown. Nevertheless, if this application is approved, the water permit should include a qualification that the well owner should control their withdrawals so there is not a reduction of water for adequate domestic wells or for adequate wells having prior water rights.

When considering the large amount of artesian head pressure (40 feet average), saturated thickness of the aquifer in this area, the hydrographs of nearby observation wells not showing detrimental impact of pumping, and the lack of well interference complaints due to pumping, there is reasonable probability that the proposed diversion can be developed without unlawfully impairing existing appropriative or domestic water users with adequate wells.

SDCL 46-5-6:

Pursuant to SDCL 46-5-6, the diversion rate for an irrigation appropriation cannot be in excess of one cfs for every 70 acres, or “the equivalent thereof.” The statute does provide that: “The Water Management Board may allow a greater diversion, in volume or rate or both, if the method of irrigation, any time constraints on diversion of water, or the type of soil so requires. However, no annual volume may be greater than three acre-feet per acre delivered to the land.” Water Permit Application No. 8489-3 proposes to divert water at a maximum instantaneous diversion rate of 1.78 cfs for the irrigation of 120 acres or at a rate of 1.04 cfs per 70 acres. No reason was provided by the applicant for this slight exceedance. However, from the map provided, it appears as if the applicant wants to use a smaller system to avoid spraying several residences located on the south

portion of the proposed irrigated area. A smaller pivot may require the same flow rate to operate as a typical sized pivot, but cover a smaller area resulting in the exceedance for the 1 cfs per 70 acres. This type of reason has been accepted by the Water Management Board in past.

CONCLUSIONS:

1. Water Permit Application No. 8489-3 proposes to appropriate water at a maximum instantaneous diversion rate of 1.78 cubic feet per second (cfs) from the Missouri: Elk Point aquifer. The applicant intends to divert water from a single, approximately 140 feet-deep, well to be located near the center of the SW $\frac{1}{4}$ Section 16 for irrigation of 120 acres located in the SW $\frac{1}{4}$ Section 16; all in T90N-R49W. The site is located approximately 4.0 miles west of Jefferson, SD.
2. Based on the hydrologic budget and the potential to further induce recharge from the Missouri River, there is a reasonable probability unappropriated water is available for this proposed application.
3. There is a reasonable probability the diversion proposed by this application can be made without unlawfully impairing existing appropriative or domestic users with adequate wells.
4. Application No. 8489-3 has requested a diversion rate in excess of the statutory limit of one cfs per 70 acres. No reason was provided however, it appears as if the applicant wants to use a smaller system to avoid spraying several residences located on the south portion of the proposed irrigated area. A smaller pivot may require the same flow rate to operate as a typical sized pivot, but cover a smaller area resulting in the exceedance for the 1 cfs per 70 acres. This type of reason has been accepted by the Water Management Board in past.

NOTICE OF APPLICATION NO. 8489-3 to Appropriate Water

Notice is given that Blake Allard, 47834 330th St, Jefferson SD 57038 has filed an application for a water permit to appropriate 1.78 cubic feet of water per second (cfs) from one well to be completed into the Missouri:Elk Point Aquifer (approximately 140 feet deep) located near the center of the SW 1/4 Section 16 for irrigation of 120 acres located in the SW 1/4 Section 16; all in T90N-R49W. The applicant is requesting a diversion rate greater than the statutory limit of 1 cfs per 70 acres. This site is located approximately 4 miles west of Jefferson SD.

Pursuant to SDCL 46-2A-2, the Chief Engineer recommends APPROVAL of Application No. 8489-3 with qualifications because 1) unappropriated water is available, 2) existing rights will not be unlawfully impaired, 3) it is a beneficial use of water, and 4) it is in the public interest. The Chief Engineer's recommendation with qualifications, the application, and staff report are available at <http://denr.sd.gov/public> or contact Ron Duvall for this information, or other information, at the Water Rights Program address provided below.

Any person interested in opposing or supporting this application or recommendation must file a written petition with BOTH the applicant and Chief Engineer. The applicant must file a petition if contesting the Chief Engineer's recommendation. The Chief Engineer's address is "Water Rights Program, Foss Building, 523 E Capitol, Pierre SD 57501 (605 773-3352) and the applicant's mailing address is given above. A petition filed by either an interested person or the applicant must be filed by April 26, 2021.

The petition may be informal but must include a statement describing the petitioner's interest in the application, the petitioner's reasons for opposing or supporting the application, and the signature and mailing address of the petitioner or the petitioner's legal counsel, if legal counsel is obtained.

If the applicant does not contest the recommendation of the Chief Engineer and no petition to oppose the application is received, the Chief Engineer shall act on the application pursuant to the recommendation with no hearing held before the Water Management Board. If a petition opposing the application or contesting the recommendation is filed, then a hearing will be scheduled, and the Water Management Board will consider this application. Notice of the hearing will be given to the applicant and any person filing a petition.

**NOTICE
OF APPLICATION
NO. 8489-3
TO APPROPRIATE
WATER**

Notice is given that Blake Allard, 47834 330th St, Jefferson SD 57038 has filed an application for a water permit to appropriate 1.78 cubic feet of water per second (cfs) from one well to be completed into the Missouri:Elk Point Aquifer (approximately 140 feet deep) located near the center of the SW 1/4 Section 16 for irrigation of 120 acres located in the SW 1/4 Section 16; all in T90N-R49W. The applicant is requesting a diversion rate greater than the statutory limit of 1 cfs per 70 acres. This site is located approximately 4 miles west of Jefferson SD.

Pursuant to SDCL 46-2A-2, the Chief Engineer recommends APPROVAL of Application No. 8489-3 with qualifications because 1) unappropriated water is available, 2) existing rights will not be unlawfully impaired, 3) it is a beneficial use of water, and 4) it is in the public interest. The Chief Engineer's recommendation with qualifications, the application, and staff report are available at <http://denr.sd.gov/public> or contact Ron Duvall for this information, or other information, at the Water Rights Program address provided below.

Any person interested in opposing or supporting this application or recommen-

dation must file a written petition with BOTH the applicant and Chief Engineer. The applicant must file a petition if contesting the Chief Engineer's recommendation. The Chief Engineer's address is "Water Rights Program, Foss Building, 523 E Capitol, Pierre SD 57501 (605 773-3352)" and the applicant's mailing address is given above. A petition filed by either an interested person or the applicant must be filed by April 26, 2021.

The petition may be informal but must include a statement describing the petitioner's interest in the application, the petitioner's reasons for opposing or supporting the application, and the signature and mailing address of the petitioner or the petitioner's legal counsel, if legal counsel is obtained.

If the applicant does not contest the recommendation of the Chief Engineer and no petition to oppose the application is received, the Chief Engineer shall act on the application pursuant to the recommendation with no hearing held before the Water Management Board. If a petition opposing the application or contesting the recommendation is filed, then a hearing will be scheduled, and the Water Management Board will consider this application. Notice of the hearing will be given to the applicant and any person filing a petition. Publish April 15, 2021

NOTICE OF APPLICATION NO. 8489-3 to Appropriate Water

Notice is given that Blake Allard, 47834 330th St, Jefferson SD 57038 has filed an application for a water permit to appropriate 1.78 cubic feet of water per second (cfs) from one well to be completed into the Missouri:Elk Point Aquifer (approximately 140 feet deep) located near the center of the ~~NW 1/4~~ SW 1/4 Section 16 for irrigation of 120 acres located in the SW 1/4 Section 16; all in T90N-R49W. The applicant is requesting a diversion rate greater than the statutory limit of 1 cfs per 70 acres. This site is located approximately 4 miles west of Jefferson SD.

Pursuant to SDCL 46-2A-2, the Chief Engineer recommends APPROVAL of Application No. 8489-3 with qualifications because 1) unappropriated water is available, 2) existing rights will not be unlawfully impaired, 3) it is a beneficial use of water, and 4) it is in the public interest. The Chief Engineer's recommendation with qualifications, the application, and staff report are available at <http://denr.sd.gov/public> or contact Ron Duvall for this information, or other information, at the Water Rights Program address provided below.

Any person interested in opposing or supporting this application or recommendation must file a written petition with BOTH the applicant and Chief Engineer. The applicant must file a petition if contesting the Chief Engineer's recommendation. The Chief Engineer's address is "Water Rights Program, Foss Building, 523 E Capitol, Pierre SD 57501 (605 773-3352)" and the applicant's mailing address is given above. A petition filed by either an interested person or the applicant must be filed by April 26, 2021.

The petition may be informal but must include a statement describing the petitioner's interest in the application, the petitioner's reasons for opposing or supporting the application, and the signature and mailing address of the petitioner or the petitioner's legal counsel, if legal counsel is obtained.

If the applicant does not contest the recommendation of the Chief Engineer and no petition to oppose the application is received, the Chief Engineer shall act on the application pursuant to the recommendation with no hearing held before the Water Management Board. If a petition opposing the application or contesting the recommendation is filed, then a hearing will be scheduled, and the Water Management Board will consider this application. Notice of the hearing will be given to the applicant and any person filing a petition.

Dear Mr. Allard:

Water Permit Application No. 8489-3 for irrigation use has been examined and found to comply with the South Dakota Water Laws and applicable rules. A notice has been sent to the Leader-Courier printed at Elk Point SD (Ph # 605 356-2632) and the Press & Dakotan printed at Yankton SD (Ph # 605 665-7811). You will need to contact the newspapers and authorize publication of this notice. For your information, a copy of the notice, the recommendation of the Chief Engineer and report on the application are enclosed. Please review the notice prior to publication and notify this office, if you have any corrections or questions.

Be sure to contact the above newspapers to authorize publication of your Notice and to arrange for payment. Early contact with the papers can eliminate delays. Upon receiving authorization from you, the publishers have been instructed to publish your notice. The newspapers have also been instructed to send us the Proof of Publication. We must receive Proof of Publication before action can be taken on the application.

Sincerely,

Karen Schlaak

Jefferson SD 57038

Dear Mr. Allard:

Enclosed is Water Permit No. 8489-3 authorizing construction of the water diversion system and beneficial use of the water, not exceeding the limits as specified in the Water Permit.

Form 10, *Notice of Completion of Works and Application of Water to Beneficial Use*, is enclosed. Please return this completed form after you have finished the system and have put the water to beneficial use. An investigation can then be scheduled so the water license may be issued, thus completing the acquisition of a water right.

An informational sheet *Common Water Right Questions* is also enclosed. This sheet is intended to answer some of the questions associated with obtaining and keeping a water right.

Sincerely,

Eric Gronlund, Chief Engineer

Blake Allard
47834 330th St
Jefferson SD 57038

Dear Mr. Allard:

I am writing to acknowledge receipt of the "Notice of Completion of Works" form that you sent in to let us know that you are completed with your irrigation system authorized under Water Permit No. 8489-3.

The system is now ready for inspection. Inspections are done on a county-by-county basis as staff time permits. You have done everything you need to do and the intervening time between the completion of your project and the staff inspection has no bearing on your water permit.

Someone from our office will contact you prior to the inspection to set up a time that is convenient for you. If you have any questions, please contact me.

Sincerely,

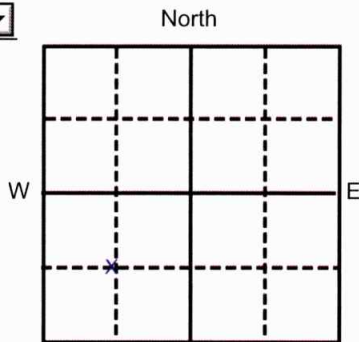

Genny McMath
